Across

1. A four-sided polygon
4. A closed plane figure having all points an equal distance from the center
6. An angle that measures less than 90 degrees
9. Lines that share a common point are ____ lines.
10. An eight-sided polygon
11. Two lines in a plane that never intersect are ____ lines.
12. The common endpoint of two rays
13. An angle that measures 90 degrees
15. Figures that have the same shape but not necessarily the same size are said to be ____.
17. The number of square units needed to cover a region or figure
19. A figure formed by two rays with the same endpoint
20. A five-sided polygon
24. A ten-sided polygon
25. A line that divides a figure into two matching parts is a line of ____.
27. Lines that intersect and form right angles are ____ lines.
28. A closed plane figure with any number of sides
29. A three-sided polygon

Down

2. A parallelogram with four right angles
3. The distance around a figure
5. A straight path with no endpoints; it goes on forever in both directions
7. The distance around a circle
8. A subset of a line which contains two endpoints
11. A quadrilateral in which the opposite sides are parallel and congruent
14. A six-sided polygon
16. A flat surface that goes on and on in all directions
18. A rectangle with four equal sides
21. A line that divides an angle in half
22. An angle that measures more than 90 degrees
23. Figures that have the same size and shape are ____.
26. A part of a line that has one endpoint and goes on forever in one direction
