Dairy Product Inventory Tracking

The Objective

Agropur, a leading manufacturer and distributor in the dairy industry, had been utilizing a simple inventory maintenance system that was terminal emulation based. They wanted to extend the functionality to other areas of the warehouse floor, such as shipping/receiving, inventory movement tracking, and product look-ups. They were looking for a simple, ruggedized handheld device to carry out this expansion of their systems.

The Solution

Agropur upgraded their handheld devices to the **AML M7220 Wireless Handheld**. They desired a rugged handheld terminal without the added cost and complexity of unnecessary features such as a Windows® operating system or color screens, and the simplicity of the AML M7220 fit their needs perfectly. The M7220 is an affordable, flexible solution for customers that utilize terminal emulation applications.

Wireless Handheld

Summary

Agropur is now managing their inventory with the AML M7220. They are tracking inventory movement and locating products in the warehouse quickly and efficiently utilizing the AML M7220, enjoying the benefits of real-time data about each product from the time it is received until the time it is shipped and everywhere in between.
