

RISK ASSESSMENT

Hazard	Risk	Risk Assessment	Existing Controls	Recommended Elimination or Control Measures	Evaluation of Risk Management Plan
Identify the hazardous work task, environment, procedure, equipment or human behaviour (where applicable).	What is the foreseeable injury or damage associated with the hazard?	Are the risks associated with the hazard regarded as low, medium or high?	What has been/is currently being done to fix the problem? Are they effective measures?	What will be done to reduce or remove the risk? By whom? By when?	Repeat steps to ensure risk levels are now at an acceptable level.
