

Frontend-focused web developer with a passion for design. I have experience working with Angular, React, Django, Python, Go, MEAN stack, jQuery, and countless other frontend and backend frameworks and tools, but I spend most of my time fighting with HTML, Javascript, and CSS/SASS/LESS.

## PROJECTS

### ineedaresu.me

Mar 2015

A dead-simple resume generator that lets you create a resume in minutes. Built on AngularJS using localStorage to save user data. The generator creates a well-designed resume that is printable or can be downloaded as a PDF.

### Ceev.io

February 2018

This is my latest project - basically a re-do of ineedaresu.me since I sold that and no longer have access to it. Ceev makes creating resumes insanely simple on any device. Users can save their resumes to access anywhere, and the webapp offers a ton of customization options to create an awesome resume.

### Open Source Electron Apps

December 2017

I have a few open-source Electron desktop apps available on my GitHub @mitchas. They're tools that I've created because they're tools I wanted to use, so I developed them and released the source. One is a floating transparent web browser, and another is a super minimal FTP client.

## LANGUAGES

**English** Native or bilingual

**German** Limited working

## SKILLS

CSS, Web Development, JavaScript, Web Design, User Interface Design, User Interface, Mobile Devices, User Experience, Graphic Design, HTML5, HTML, WordPress, Microsoft Excel, Photoshop, PHP, HTML 5, jQuery, Dreamweaver, Leadership

## EXPERIENCE

### Frontend Developer Contractor

Jun 2014 – Present Madison, WI

- Create and maintain a style guide for use throughout our group's web applications to ensure consistent design, fonts, colors, UI elements, etc.
- Design and apply styling and layout changes to existing applications.
- Design and develop map-based web applications.
- Design, develop, and maintain the group home page at wim.usgs.gov.
- Ensure mobile compatibility/responsiveness of all group websites and applications on all platforms and browsers.
- Make sure the sites and applications meet federal government standards and requirements (at least if they are reasonable requirements :)).

### Freelance Frontend Web Developer Mitchs.co

Jan 2009 – Present Minnesota

- Design, develop, and deploy full-stack websites for clients, normally using HTML, CSS/LESS, Angular, and Firebase if needed.
- Communicate with potential clients, outlining their needs and my abilities.

### Lead Front End Engineer Export Abroad

May 2014 – Jan 2017 Madison, WI

- Advise team on usage of Frontend tools and frameworks - Angular, Django, Bootstrap, etc.
- Design and develop the consumer-facing home page at exportabroad.com, as well as the Wordpress blog at blog.exportabroad.com.
- Ensure and develop mobile compatibility/responsiveness of all Export Abroad websites.
- Debug issues within home page and web application.
- Wireframe, design, and develop the enterprise web application on Python/Django with Angular.
- Design and develop the company style guide to ensure consistent styles throughout the web and print.
