

# Certification Letter

PROJECT NAME: \_\_\_\_\_

The project is complete, as designed and approved. At this time, all conditions set forth in land use and attached to the permit issued by Josephine County Public Works have been met. The attached as-built contain any and all approved revisions to the previously approved construction plans and reflect the work which was constructed. The site and adjacent properties (as affected by work performed under the County permit) are stable with respect to settlement and subsidence, shallow and deep sloughing of cut and fill slopes. This letter has, as attachment, a copy of a certification letter from any specialists that were required in the design of the project (soils engineer, surveyor, arborist, wetland scientist, engineering hydrologist, etc.) that covers the items relating to their specialty. In addition, I am also indicating that the site either has all vegetation/landscaping established or all erosion control measures as needed based on the current best management practice, and are installed in good working order. This certification also guarantees that the improvements covered by this permit are complete and are currently functioning (or capable of functioning) as designed. Adequate inspection and testing has been accomplished to ensure that by stamping and signing each page "As-Built", I am in compliance with OAR 820-20-025. This signature constitutes a certification that the public improvements, grading, and other elements of the engineered drawings have been completed in accordance with the County approved plans and to the standards of the County.
