

Your Voice Matters: Patient Experience with Primary Care Providers in Washington State February 2018

www.wacommunitycheckup.org

Dear Community Member,

YOUR VOICE MATTERS is an initiative of the Washington Health Alliance to understand patients' experience with their primary health care providers.

While many medical groups take steps to periodically assess their patients' experience using a variety of survey tools, *the Alliance's initiative is the only one of its kind to produce comparable, publicly available patient experience results for primary care providers in Washington state.*

This is the fourth time that the Alliance has administered this nationally developed and standardized patient experience survey. Between August and November 2017, surveys were sent to 250,000 people throughout Washington. We achieved a 26% response rate overall. We are very pleased that this response rate enables reporting of results for 114 primary care medical groups and 351 clinics across the state.

The Washington Health Alliance Patient Experience Survey is based on the Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Clinician & Group Core Survey 3.0, also known as the CG-CAHPS Survey. The CG-CAHPS survey content is shaped by input from patients and other key stakeholders, including health care providers, health plans and purchasers of care.

The CG-CAHPS survey asks patients to report their experiences with their health care provider and the provider's office staff. The CG-CAHPS was first endorsed by the National Quality Forum (NQF) in 2007 and this endorsement was renewed in 2015. By using a nationally developed, standardized survey, we are not only able to compare our results locally but also benchmark those results against national best practices.

The Alliance's patient experience survey also includes supplemental questions approved by the Alliance's Quality Improvement Committee and the Governor's Performance Measures Coordinating Committee.

Through this effort, we are striving to:

- Send clear signals for expected performance by measuring and publicly reporting patient experience in a standardized manner across medical groups and clinics;
- Support learning opportunities by providing detailed, actionable information for primary care practices to improve patient experience (detailed reports available); and
- Activate health care purchasers (employers, union trusts) and consumers to better understand and expect excellence in patient experience.

We would like to extend our sincere thanks to six health plans – Cigna, Kaiser Permanente Washington, Premiera Blue Cross, Regence Blue Shield, UnitedHealthcare, and the Washington State Health Care Authority (Medicaid). They recognized the importance of this effort and enabled the survey by providing information to draw the patient sample. We would also like to thank The Center for the Study of Services (CSS), the vendor that fielded the survey on behalf of the Alliance.

For more information, please contact Susie Dade at the Washington Health Alliance: sdade@wahealthalliance.org.

Sincerely,

Nancy A. Giunto, Executive Director
Washington Health Alliance

Summary of patient experience survey results

GETTING TIMELY APPOINTMENTS, CARE AND INFORMATION (Scores reflect the % of patients that responded “Always”)	
Washington state average	56.6%
Washington 90 th percentile performance	66.8%
National 90 th percentile performance*	81%
Range of performance across Washington clinics**	25.8% - 88.5%
HOW WELL PROVIDERS COMMUNICATE WITH PATIENTS (Scores reflect the % of patients that responded “Always”)	
Washington state average	83.5%
Washington 90 th percentile performance	89.5%
National 90 th percentile performance*	94%
Range of performance across Washington clinics**	63.0% - 95%
HOW WELL PROVIDERS USE INFORMATION TO COORDINATE PATIENT CARE (Scores reflect the % of patients that responded “Always”)	
Washington state average	68.0%
Washington 90 th percentile performance	74.9%
National 90 th percentile performance*	82%
Range of performance across Washington clinics**	45.3% - 86.4%
HELPFUL, COURTEOUS AND RESPECTFUL OFFICE STAFF (Scores reflect the % of patients that responded “Always”)	
Washington state average	74.6%
Washington 90 th percentile performance	82.2%
National 90 th percentile performance*	91%
Range of performance across Washington clinics**	46.1% - 90.6%
PATIENT’S OVERALL RATING OF THE PROVIDER (Scores reflect the % of patients that responded 9-10 on a scale of 0-10)	
Washington state average	74.1%
Washington 90 th percentile performance	82.0%
National 90 th percentile performance*	91%
Range of performance across Washington clinics**	44.6% - 90.4%

*2016 CAHPS Clinician and Group Survey Database (most recent data from CAHPS database available)

**Range of performance shown as lowest scoring and highest scoring medical clinic.

How do this year's scores compare to scores from the 2015 and 2013 surveys?

	CHANGE* 2015 TO 2017	2017**	2015**	2013**
Getting timely appointments, care and information	Declined	56.6%	58.0%	54.1%
How well providers communicate with patients	Improved	83.5%	83.0%	79.2%
How well providers use information to coordinate patient care	Declined	68.0%	70.6%	NA
Helpful, courteous and respectful office staff	Improved	74.6%	73.0%	73.2%
Patient's overall rating of the provider	Same	74.1%	74.3%	73.8%

*Statistically significant change at the 95% confidence level.

** Based on medical groups and clinics with four or more providers in: 35 counties (2017); 14 counties (2015); and five counties (2013)

NOTE: The questions that contribute to the composites have changed slightly since 2013 given the move to CG-CAHPS 3.0.

Why do we measure patient experience?

“Patient-centeredness” is now widely accepted as a core dimension of health care quality and, as a result, there is heightened market focus on patient experience. Measures of patient experience are included in the Washington State Common Measure Set for Health Care Quality and Cost, and are used to evaluate performance and support value-based purchasing (where provider payment is linked to performance on important measures of quality and cost).

Consumer awareness is growing. Information is becoming more available about health care quality and cost, and patients are beginning to learn how to use this information to make informed choices about where to get their care. Experience of care matters to patients and, for them, is an important differentiator among health care providers.

A positive patient experience and better outcomes go hand-in-hand. Research indicates there are positive relationships between a provider’s communication skills and a patient’s capacity and/or willingness to follow through with medical recommendations, self-manage a chronic condition and adopt preventive health behaviors. Studies show that the clinician’s ability to explain, listen and empathize can have a significant effect on biological and functional health outcomes.

What do we mean by patient experience?

Patient experience refers to **what happens** to an individual when they are interacting with the health care system, based on their perceptions of those interactions. Surveys designed to measure patient experience include but go well beyond simple ratings of satisfaction. The majority of questions ask patients *whether or not, or how often, certain events or behaviors actually occurred*.

In contrast, patient satisfaction surveys use ratings to ascertain a person’s feelings about their care, such as *very satisfied to very dissatisfied*, which are much more subjective. Patient satisfaction may be a reasonable measure of business loyalty but, by itself, it is not strongly linked to improved health outcomes in any meaningful way.

What measures are included in this report?

Included in this report, as well as in the results that are reported on the Alliance's Community Checkup website, are five measures that summarize the results of the survey. Four of these five measures are composite measures. Composite measures are calculated to summarize results from several survey questions that relate to a similar topic.

Only measures that had a sufficient number of responses in order to be considered reliable (0.7 reliability) are publicly reported. This assessment was made on a clinic-by-clinic, measure-by-measure basis.

All rates are case-mix adjusted for age, gender, education and self-reported health status.

1. Getting Timely Appointments, Care and Information (Composite of 3 survey questions)

Description: The survey asks patients how often they got appointments for care as soon as needed and how often they received timely answers to questions when they contacted the office.

2. How Well Providers Communicate with Patients (Composite of 4 survey questions)

Description: The survey asked patients how often their provider explained things clearly, listened carefully, showed respect, and spent enough time with the patient.

3. How Well Providers Use Information to Coordinate Patient Care (Composite of 3 survey questions)

Description: The survey asked patients how often their provider knew information about their medical history, talked to them about prescription medications, and followed up with them regarding medical test results.

4. Helpful, Courteous and Respectful Office Staff (Composite of 2 survey questions)

Description: The survey asked patients how often office staff were helpful and treated them with courtesy and respect.

The fifth measure is not a composite, but rather reflects patient responses to a single question and is the only satisfaction-based question in the survey.

5. Patient's Overall Rating of the Provider

Description: The survey asked patients to rate their provider on a scale of 0 to 10, with 0 being the worst and 10 being the best.

Only primary care medical groups and clinics that have four or more providers have been included in this patient experience survey.

Reported performance results reflect the “top box” score

The reported rate is the top box score, i.e., the percentage of patients whose responses indicated high performance for a given measure.

QUESTIONS ASK:	TOP BOX = % OF PATIENTS RESPONDING	SCALE
How often something happens	Always	Always, Usually, Sometimes, Never
Whether something happens	Yes or Yes definitely	Yes/No, or Yes definitely/Yes somewhat/No
Overall rating of the provider	9 or 10	0 to 10

Celebrating excellence in Washington state!

8

In Washington, we strive to achieve the national 90th percentile on measures of quality and patient experience. It's a tough goal to achieve but it can be done. **The following five clinic sites received a score on one of the five measures that meets or exceeds the national 90th percentile score for this measure of patient experience.**

CLINIC	MEASURE	CLINIC'S % OF PATIENTS SAYING “ALWAYS”	NATIONAL 90 TH PERCENTILE
Sequim Medical Associates	Getting timely appointments, care and information	85.1%	81%
Lourdes West Pasco	How well doctors communicate with patients	95.0%	94%
Creekside Medical	How well providers communicate with patients	94.4%	
Familycare of Kent	How well providers use information to coordinate patient care	86.4%	82%
Marysville Family Medicine	How well providers use information to coordinate patient care	82.2%	

How does a patient's experience link to the overall rating of the provider?

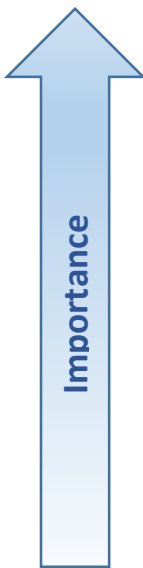

The CG-CAHPS patient experience survey essentially has only one satisfaction question and that is the patient's overall rating of the provider.

To help identify opportunities and priorities for improvement, we conducted a comprehensive analysis of key drivers of patient satisfaction with health care providers. We do this to identify which aspects of the patient's *experience* distinguish practices that are highly rated overall from practices that are lowly rated overall; in other words, what needs to happen during the course of the patient's experience to result in higher overall rating of the provider.

The analysis identified six key drivers of overall patient satisfaction with the health care provider. These same six were identified in 2013 and 2015, although not necessarily in the same order. It is notable that five of the six relate to provider communication and coordination of care. Combined, these six variables explain 75% of the variation in the overall provider rating.

With results from this survey, the Alliance has also produced individual key driver analyses for each medical group to assist with targeted quality improvement efforts.

The following table shows the six variables in order of importance.

KEY DRIVERS OF OVERALL PROVIDER RATING HOW OFTEN DID YOUR PROVIDER . . .	CORRELATION COEFFICIENT	WA AVERAGE	NAT'L 90 TH PERCENTILE
Listen carefully to you	0.81	83.7%	95%
Show respect for what you had to say	0.80	87.3%	96%
Seem to know the important information about your medical history	0.79	69.9%	88%
Explain things in a way that was easy to understand	0.75	83.3%	93%
Spend enough time with you	0.71	80.0%	93%
Seem informed and up-to-date about the care you got from specialists	0.68	61.3%	77%

Patient experience results: Medical groups and clinics in Washington state

The following charts include results for medical groups and clinics that have reportable results on all five measures. Results for medical groups and clinics that have results for fewer than five measures may be found at www.wacommunitycheckup.org.

Primary Care Medical Group Performance

Summary: Patient Experience Survey Results

Medical Group Compared to State Average

■ Better
 ■ Average
 ■ Worse

*Federally Qualified Health Center

The results are rank ordered first by performance and then in alphabetical order by medical group. The 2017 Patient Experience Survey was administered August through November 2017. Patients in the sample had a qualifying visit between July 2016 and May 2017. There are a total of 5 measures. Measures are unweighted; all 5 measures are treated equally for the purpose of this graphic.

Other important findings from the Patient Experience Survey

The following results reflect the Washington state average.

Patient engagement regarding their health

DID ANYONE IN THIS PROVIDER'S OFFICE TALK WITH YOU ABOUT SPECIFIC GOALS FOR YOUR HEALTH ?	
Yes	No
66.7%	33.3%

Top Box (Yes) range of performance across Washington clinics* = 43.5% - 86.7%

DID ANYONE IN THIS PROVIDER'S OFFICE ASK YOU IF THERE ARE THINGS THAT MAKE IT HARD FOR YOU TO TAKE CARE OF YOUR HEALTH?	
Yes	No
38.2%	61.8%

Top Box (Yes) range of performance across Washington clinics* = 21.7% - 65.1%

DID YOU AND YOUR PROVIDER TALK ABOUT A HEALTHY DIET AND HEALTHY EATING HABITS?		
Yes, definitely	Yes, somewhat	No
39.1%	31.5%	29.4%

Top Box (Yes definitely) range of performance across Washington clinics* = 20.7% - 70.4%

DID YOU AND THIS PROVIDER TALK ABOUT THE EXERCISE OR PHYSICAL ACTIVITY YOU GET?		
Yes, definitely	Yes, somewhat	No
49.2%	32.1%	18.7%

Top Box (Yes definitely) range of performance across Washington clinics* = 25.3% - 77.5%

*Range of performance shown as lowest scoring and highest scoring medical clinic.

DID THIS PROVIDER EVER ASK YOU WHETHER THERE WAS A PERIOD OF TIME WHEN YOU FELT SAD, EMPTY OR DEPRESSED?	
Yes	No
58.0%	42.0%

Top Box (Yes) Range of performance across Washington clinics* = 20.7% - 87.5%

Advice about smoking, vaping and other tobacco use

Thirteen percent (13.1%) of respondents say that they now smoke cigarettes, vape or use other tobacco or nicotine products some days or every day. Among these respondents:

HOW OFTEN WERE YOU ADVISED TO QUIT BY YOUR PRIMARY CARE PROVIDER?	
Never	11.4%
Sometimes	16.7%
Usually	22.0%
Always	49.9%

Top Box (Always) Range of performance across Washington clinics* = 0% - 100%

31

Use of handheld devices and impact on patient experience

Because provider-patient communication is so important, we asked about the impact of technology. The news here is good, with less than 4% of respondents saying that the provider's use of a computer or handheld device makes it harder to talk.

DID THIS PROVIDER'S USE OF A COMPUTER OR HANDHELD DEVICE MAKE IT HARDER OR EASIER FOR YOU TO TALK WITH HIM OR HER?		
Harder	Not harder or easier	Easier
3.5%	61.1%	35.3%

Information about the cost of care

The following results are for patients who indicated they needed health care services beyond what is provided in a routine office visit (such as a treatment, procedure or prescription medicine).

BEFORE GETTING THIS HEALTH CARE SERVICE, DID THIS PROVIDER OR SOMEONE IN THIS PROVIDER'S OFFICE HELP YOU FIND OUT HOW MUCH YOU WOULD HAVE TO PAY FOR IT?	
Yes	No
27.0%	73.0%

Alcohol use and advice about drinking less or not to drink

The Alliance was asked by the Governor’s Performance Measures Coordinating Committee to include the following questions in this year’s patient experience survey. The U.S. Preventive Services Task Force recommends preventive alcohol screening followed by brief interventions for adults drinking at risky levels, because rigorous trials have shown that brief interventions decrease drinking in patients drinking at unhealthy levels. As a result, such screening and brief interventions are considered an essential benefit under the Affordable Care Act. Validated single item screening questions about so-called “binge drinking” are often used to identify patients who could benefit from brief alcohol interventions. Explicit advice to drink below recommended limits or to not drink is a key element of brief alcohol interventions with demonstrated efficacy in primary care. As a result, patient reports of alcohol-related advice on patient experience surveys has been recommended as a quality measure for preventive alcohol-related brief interventions.

The results of this survey indicate that male respondents have a drink containing alcohol four or more times a week about twice as often as women.

HOW OFTEN DID YOU HAVE A DRINK CONTAINING ALCOHOL?			
	Overall	Men	Women
Never	33.5%	30.7%	35.2%
Monthly or less	22.5%	17.9%	25.2%
2 to 4 times a month	17.5%	17.9%	17.2%
2 to 3 times a week	14.8%	16.9%	13.5%
4 or more times a week	11.7%	16.5%	8.8%

32

The frequency of having a drink containing alcohol changes with age.

There was a survey question related to unhealthy alcohol use. This varies by gender and age. Approximately 35% of males and 21% of females respond that they have five or more drinks on one occasion, at least some of the time.

HOW OFTEN DID YOU HAVE FIVE OR MORE DRINKS ON ONE OCCASION?			
	Overall	Male	Female
Never	73.4%	65.4%	78.6%
Less than monthly	17.1%	19.8%	15.4%
Monthly	5.4%	7.9%	3.8%
Weekly	3.0%	5.2%	1.6%
Daily or almost daily	1.0%	1.6%	0.6%

Among those respondents who reported having five or more drinks on one occasion, considered unhealthy alcohol use or binge drinking, we examined whether their primary care provider or other health care provider advised them about drinking (to drink less or not to drink at all). Results of the survey reveal that 37.1% of adults (29.4% of women and 44.4% of men) who screen positive for risky drinking report receipt of advice to drink less or not to drink at all. The probability of reporting brief alcohol-related advice increased as the frequency of binge drinking increased. This likely reflects that alcohol-related advice is focused on the most severely affected patients with alcohol use disorders. Still, over one quarter of respondents (26.4%) reporting that they have 5 or more drinks daily or almost daily also reported that they did not receive advice to drink less or not at all.

IN THE PAST 12 MONTHS, HOW OFTEN DID YOU HAVE 5 OR MORE DRINKS ON ONE OCCASION?	IN THE PAST 12 MONTHS, HAS THIS PROVIDER OR OTHER HEALTH CARE PROVIDER ADVISED YOU ABOUT DRINKING (TO DRINK LESS OR NOT TO DRINK AT ALL)?	
	% of Patients – YES	% of Patients - No
Less than monthly	28.8%	71.21%
Monthly	44.1%	55.9%
Weekly	59.4%	40.6%
Daily or almost daily	73.6%	26.4%
Total	37.1%	62.9%
Women Total	29.4%	70.6%
Men Total	44.4%	55.6%

American Indian or Alaskan Native	2.4%
Other	4.6%
ETHNICITY	
Hispanic or Latino	4.7%

**Percentage may not add to 100% because respondents could choose more than one category.

About this survey

The Center for the Study of Services (CSS) administered the survey on behalf of the Alliance. Initially, there were 364 clinics (with four or more primary care providers) across Washington that were included in the survey. The sample was randomly selected from a complete list of eligible patients provided by six participating commercial and Medicaid health plans. Eligible patients were defined as patients who were 25 years old or older with a qualifying primary care visit between July 1, 2016 and May 31, 2017. Completed survey responses enable reporting of results for 114 medical groups and 351 clinics. There were 13 clinics included in the survey that did not reach the number of responses necessary to be publicly reportable on any of the five measures. Not all medical groups and clinics have publicly reportable results for ALL five measures.

The survey was available in English and Spanish. The survey was fielded by email and in the mail. The initial email invitation was sent on July 31, 2017. For sample members who did not respond via email (or for sample members who did not have a provided email address), the questionnaire with cover letter was mailed on August 31, 2017. Respondents had the choice of completing the paper survey or responding online. Responses were collected through December 1, 2017.

The Washington Health Alliance Patient Experience Survey is based on the Consumer Assessment of Healthcare Providers and Systems (CAHPS) Clinician & Group Survey 3.0, also known as CG-CAHPS. CAHPS surveys are the most widely used surveys for assessing patient experience of care in the U.S., and have undergone rigorous scientific development and testing to ensure validity and reliability. All core questions from the CG-CAHPS survey were used in the Alliance's survey in addition to several supplemental questions that were approved by the Alliance's Quality Improvement Committee.

A copy of the survey is available upon request.

Privacy and data security

The Alliance and its staff did not have access to any patient identifiable information at any time during this process. All protected health information received by CSS to implement this survey was used only for the survey and no other purpose. All of CSS's guidelines for data security adhere to HIPAA (Health Insurance Portability and Accountability Act) and the HITECH (Health Information Technology for Economic and Clinical Health) Act. CSS has successfully completed a SOC 2 review during which their privacy and security policies, their data management systems, and their IT infrastructure were tested by an independent external auditor.

ABOUT THE ALLIANCE

The Washington Health Alliance is a place where stakeholders work collaboratively to transform Washington state's health care system for the better. The Alliance brings together organizations that share a commitment to drive change in our health care system by offering a forum for critical conversation and aligned efforts by stakeholders: purchasers, providers, health plans, consumers and other health care partners. The Alliance believes strongly in transparency and offers trusted and credible reporting of progress on measures of health care quality and value.

The Alliance is a nonpartisan 501 (c) (3) nonprofit with more than 185 member organizations. A cornerstone of the Alliance's work is the Community Checkup, a report to the public comparing the performance of medical groups, hospitals and health plans and offering a community-level view on important measures of health care quality.
