KINGDOM OF BAHRAIN

Ministry of Health

INFORMATION &
eGOVERNMENT AUTHORITY

About the Survey..

In an aim to enhance the health of individuals and society in the Kingdom of Bahrain, by providing comprehensive services, along with documented and approved health data; the Ministry of Health, in collaboration with the Information & eGovernment Authority, is currently conducting the National Health Survey project, from January up until June 2018. Adopted by the World Health Organization, the survey has been conducted in more than 70 countries including the GCC states.

Survey objectives..

The significant national project achieves the objectives of the Government Action Plan and the Health National Strategy, as it fundamentally improves and develops the health services, enhances the health information system as well as determines proprieties. Additionally, it provides an advanced database to set strategies and national action plans in partnership with all the relevant sectors to prevent diseases. Some of these objectives include:

1. Supporting the health information system and determining the Kingdom's health priorities.
2. Providing comprehensive information on the population's health status to assist decision-makers in managing, monitoring and assessing the current health system.
3. Setting a comprehensive database on population's health by providing data on a wide range of health indicators.
4. Contributing to the development of future strategy relevant to health budgets and directing expenditures on development projects.
5. Creating effective partnerships amongst all sectors associated with investment in disease prevention and promotion of healthy lifestyles.

How will we work together?

You will not be the only participant in the survey. The Health Survey will be conducted on a random sample of 4,000 Bahraini and non-Bahraini households in the Kingdom by men and women aged 18 years and above.

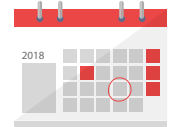

Survey mechanism involves..

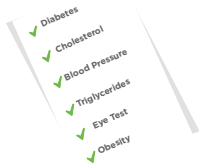

The survey officials will contact you to inform you that you were amongst the samples selected to conduct the survey.

An appointment will be made to visit you. During the visit, you will be asked a set of questions in regards to demographic data, social and health status such as cases of certain diseases.

Conduct field examinations such as height, eye test, diabetes and blood pressure.

You may be requested to fast as this will provide precise data of your health; as a result, you will learn how to maintain and improve your health. Such step is a collaboration amongst government entities to carry-out their social responsibilities; hence, your enquiries about your general health are welcomed by the field work teams.

We ought to work together as we are all responsible for our own and our families' health. The first steps that lead us to a healthy society is knowing the current health condition of our society.

We assure you that attained information will be strictly confidential.

Your participation in conducting the survey is a national duty.. Be prepared to participate.
