Annex III	Sarasin & Partners
Annex IV	CCLA Investment Management Ltd

# ANNEX I

## Investment Review

## Investment Report for the period to 31 March 2019

### Manager Performance and Key Indicators:

Under the Statement of Investment Principles the Investment Managers performance is measured by their ability to meet the following investment objectives:

- Maintain the capital value of the fund, after withdrawals, in real terms over the long term. "In real terms" means that the capital value of the fund needs to increase broadly in line with the Consumer Price Index (CPI) for Europe, and;
- To produce an annual income (cash withdrawal) of the order of €10 million per annum (rising by inflation), net of management charges and irrecoverable tax. The cash withdraw target can be met by realised capital gains.

Note: All figures are after withdrawals unless otherwise stated.

To measure whether the capital value of the fund has been maintained, after the withdrawal target is met, the value of the portfolio after withdrawals and fees is compared to the expected value of the portfolio after the Harmonised Consumer Price Index (HCIP) for Europe is applied. The results for the year to date were:

	<b>Investec</b> <b>€ 000's</b>	<b>CCLA</b> <b>€ 000's</b>	<b>Sarasin</b> <b>€ 000's</b>	<b>Total</b> <b>€ 000's</b>
Value as at 1 January 2019	139,828	112,293	103,395	355,516
Change in Harmonised Consumer Price Index (HCIP) since 1 January 2019	0.35%	0.35%	0.35%	0.35%
Target market value based on (HCIP uplift)	142,149	114,157	105,112	361,418
Actual market value as at 31 March 2019	152,155	117,065	114,477	383,697
Variance – target market value compared to actual market value	10,006	2,908	9,365	22,279
Capital value of fund maintained?	Yes	Yes	Yes	Yes
Percentage of total funds held 31 March 2019	39.7%	30.5%	29.8%	100.0%
Percentage of total funds held 31 December 2018	39.3%	31.6%	29.1%	100.0%

Following the decision of the Board of Trustees in July, the investment mandate was withdrawn from CCLA on 12 July 2018. €56 million was transferred to CCLA on 23 January 2019, with the full amount being invested in units in their fund.

The remaining €56,293,120 was transferred to CCLA on 3 May 2019. The funds were used to purchase units in the COIF Charities Investment Fund on 9 May 2019. The 50% GBP/EUR hedge using a 3 month rolling contract was implemented on the same date.

The Foundations funds are now fully invested.

The total cash withdrawal required for 2019 will be:

	<b>Amount €</b>
Exceptional withdrawals:	
UN Road Safety Trust Fund (\$3 million)	2,630,000
UN Special Envoy for Road Safety Office costs	750,000
	<u>3,380,000</u>
Withdrawal during 2019 to fund core activities	13,170,000
<b>Total withdrawal required during 2019</b>	<b><u>16,550,000</u></b>

	<b>Investec € 000's</b>	<b>CCLA € 000's</b>	<b>Sarasin € 000's</b>	<b>Total € 000's</b>
<b>Cash withdrawal:</b>				
Cash withdrawal requested and received during the year	-	-	-	-
Exceptional withdrawals	-	-	-	-
Withdrawal target met	Not requested to date	Not requested to date	Not requested to date	Not requested to date

The cash requirement will be requested in the final quarter of 2019.

**Summary:**

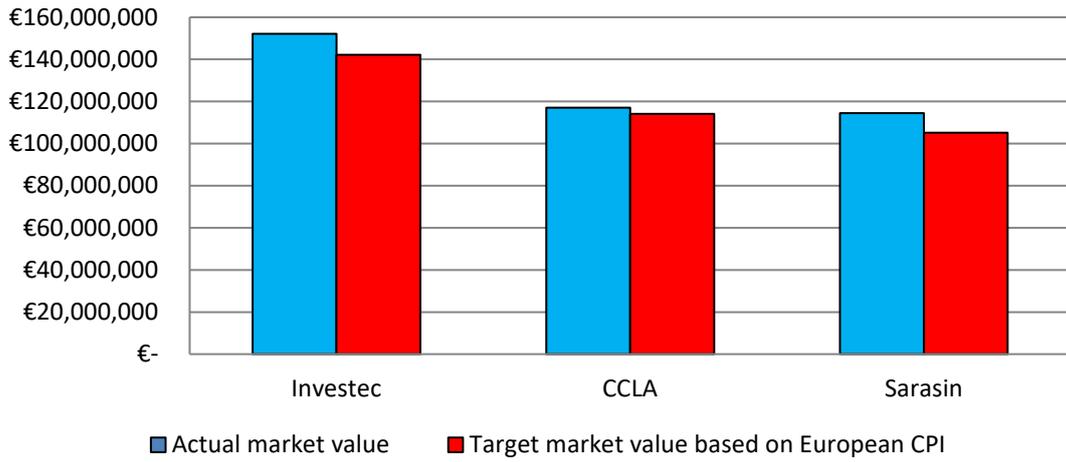

- The cash withdrawal will be requested in the final quarter of 2019.
- All manager have met the target of maintaining the capital value of the portfolio.

**Note:**

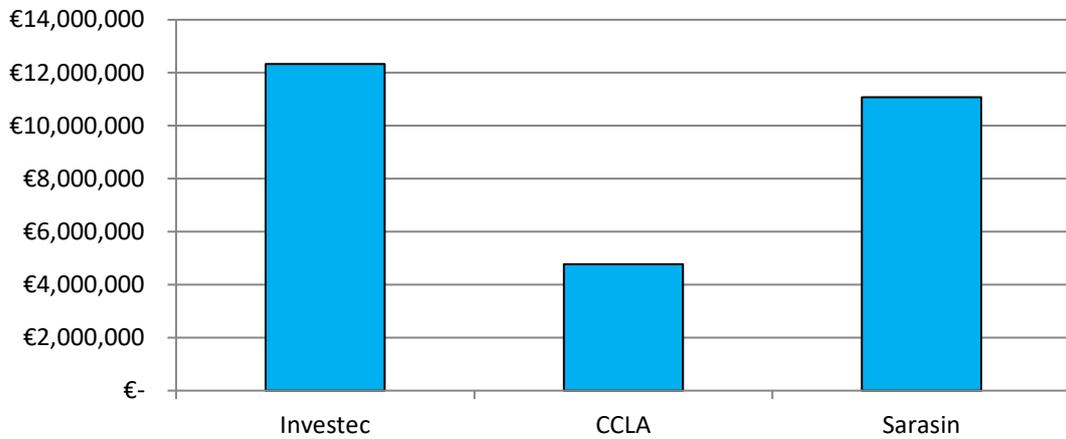

The combined request of the cash withdrawal and increasing the capital value of the fund equates to a return of approximately 3 - 4%.

The CCLA portfolio was held in cash with no investment return by Credit Suisse until transfers in January and May 2019. As a result growth in the portfolio is lagging behind the other managers due to not being fully invested to take advantage of market conditions in early 2019.

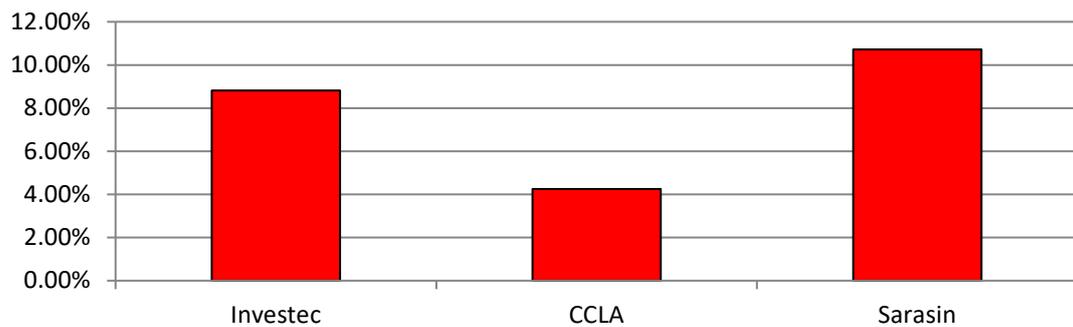

## Actual vs Target Market Value by manager

## Growth in the portfolio by manager

## Percentage growth in the portfolio by manager (net of withdrawals)

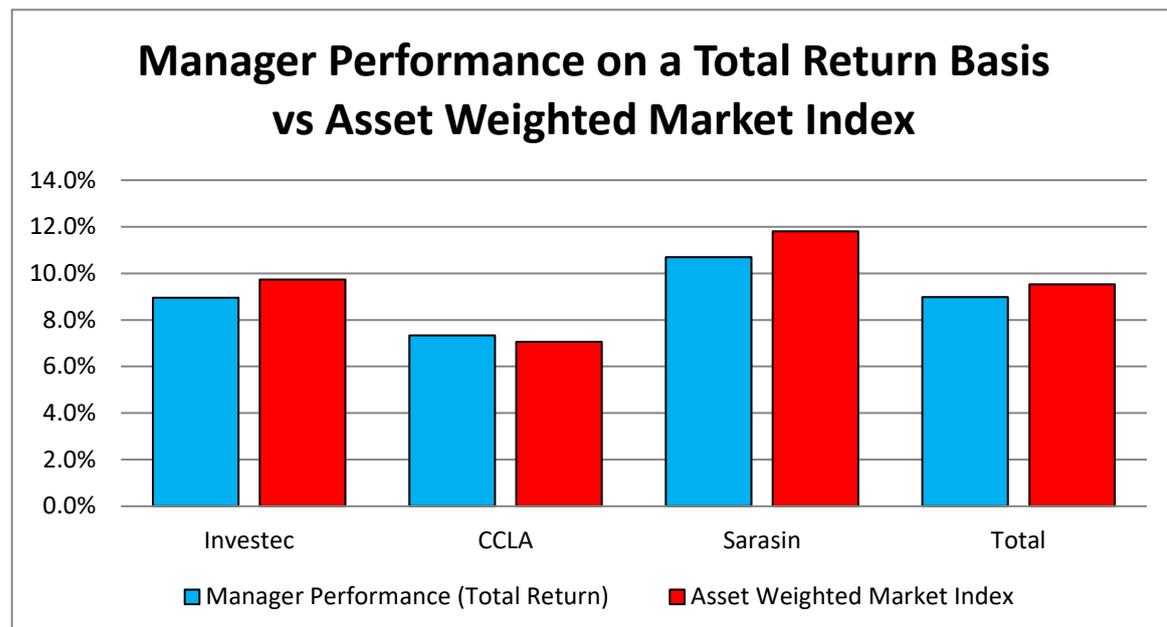

The Foundation also reviews performance compared to the Asset Weighted Market Index composed of the following indices:

Exposure to equities – FTSE all world  
 Exposure to fixed income – Citigroup WGBI EUR  
 Exposure to cash – 3m LIBOR in EUR

These are weighted for each portfolio to reflect the spread between the three main asset classes adopted by the manager, and is merely a guide to how they are performing against the underlying markets. It provides trustees with a broad measure of the quality of each manager’s stock selection, and of whether the higher fees charged for active (as opposed to passive) management are justified by the results.

The total return (prior to withdrawals and management fees) for the portfolio for the period to 31 March 2019 were:

	<b>Investec</b>	<b>CCLA*</b>	<b>Sarasin</b>	<b>Total</b>
Manager performance (total return)	9.0%	7.3%	10.7%	9.0%
Asset Weighted Market Index	9.7%	7.1%	11.8%	9.5%
Growth over the Asset Weighted Market Index	-0.7%	0.2%	-1.1%	-0.5%

\*The CCLA return is for the €56 million invested in the COIF Charities Investment Fund. It does not include the remaining €56million held in cash at Credit Suisse which achieves zero return. The return on the whole portfolio (including the cash holding) is approximately 4.2%.

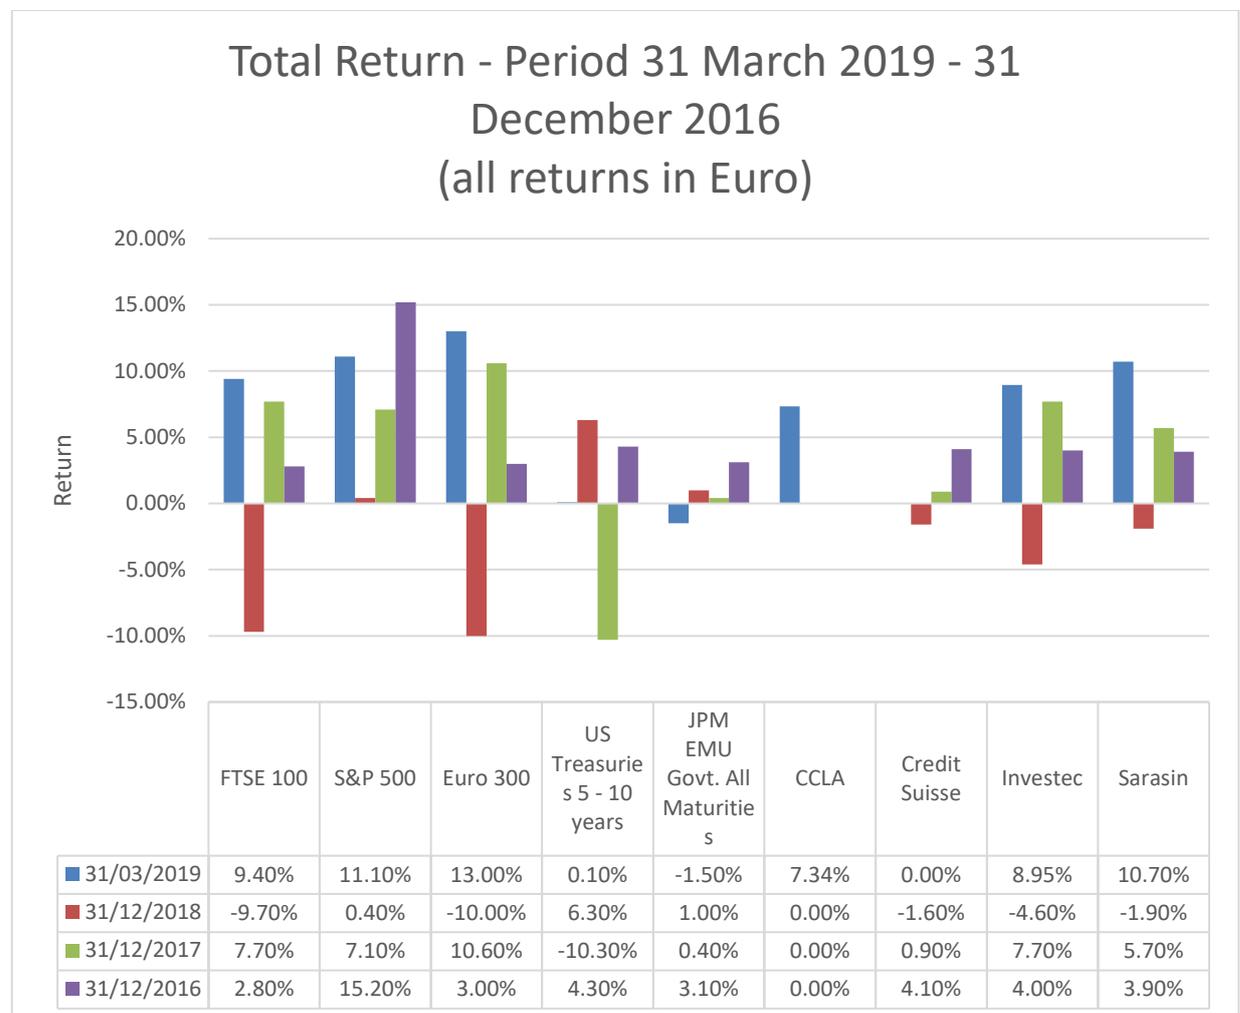

The Foundation's functional and reporting currency is Euro and the effect strong returns in non Euro denominated markets can often be eliminated when translated into Euro.

During 2019 the effect of currency fluctuations (€1: currency) was as follows:

	USD	GBP	JPY
31 December 2018	1.145137	0.898265	125.9592
31 March 2019	1.123190	0.859254	124.3821
Percentage change	-1.9%	-1.3%	-1.3%

The returns of the portfolio are also reviewed and compared to returns from recognised market indices, stated in Euro terms. Returns will not be directly comparable as the managers have fully diversified portfolios with investment in a selection of asset classes and currencies.

The results for the period to 31 March 2019 were:

The Foundation portfolios are fully diversified and are performing in line with market indices.

### Asset allocation of the portfolio

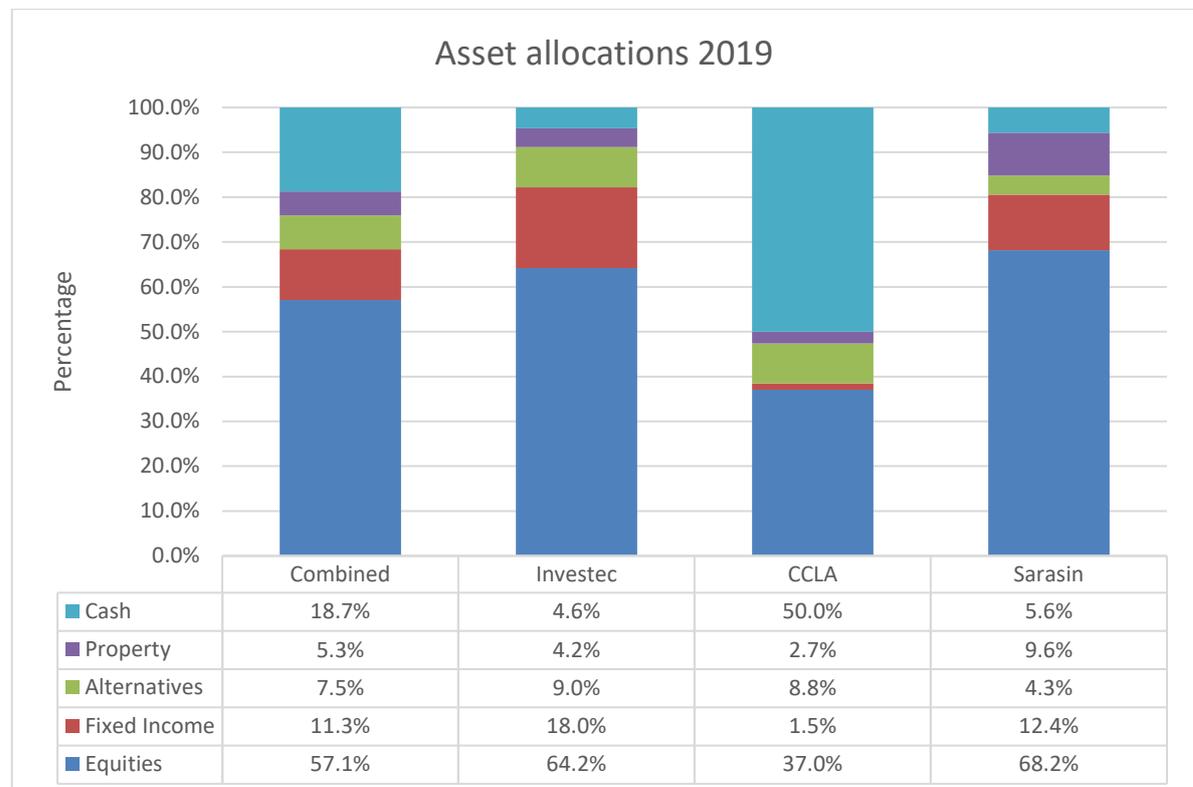

All asset allocation decisions are taken by our investment managers. Diversification is by asset class, investment manager and investment style.

Investment managers are permitted to use derivatives to ameliorate the risk associated with holding shares in different currencies and as a stop loss on equity positions within agreed limits. Use of derivatives must comply with HM Revenue and Customs guidelines.

The asset allocation by each manager and in total is shown below:

	Investec € 000's	CCLA € 000's	Sarasin € 000's	Total € 000's
Equities	97,683	43,339	78,040	219,062
Fixed Income	27,388	1,730	14,171	43,289
Alternative Investments	13,694	10,360	4,899	28,953
Property Funds	6,391	3,122	10,940	20,453
Cash and pending trades	6,999	58,514	6,427	71,940
	<b>152,155</b>	<b>117,065</b>	<b>114,477</b>	<b>383,697</b>

As noted during the last investment meeting each manager (excluding CCLA who are investing the cash transfer) indicated that the asset allocations would not change significantly.

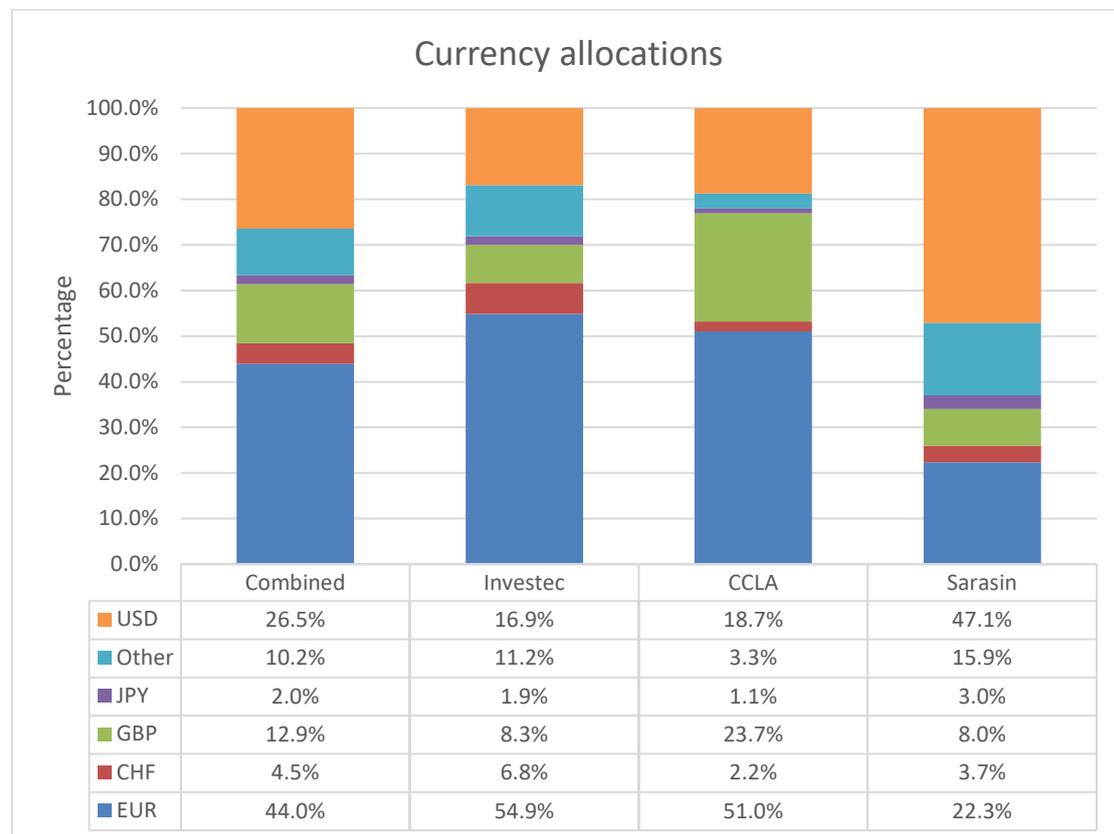

## Currency Exposure

The functional and reporting currency of the Foundation is Euro but investment managers are free to invest in any currency.

The currency exposure of the Foundation by manger and in total is as follows:

	Investec € 000's	CCLA € 000's	Sarasin € 000's	Total € 000's
Euro	83,533	59,720	25,528	168,781
Japanese Yen	2,891	1,234	3,434	7,559
Pound Sterling	12,629	27,748	9,158	49,536
Swiss Franc	10,347	2,571	4,236	17,153
US Dollar	25,714	21,884	53,919	101,517
Other	17,041	3,908	18,202	39,151
	<b>152,155</b>	<b>117,065</b>	<b>114,477</b>	<b>383,697</b>

### Maturity of the fixed income portfolio

Managers are permitted to invest in fixed income securities graded B+ and above.

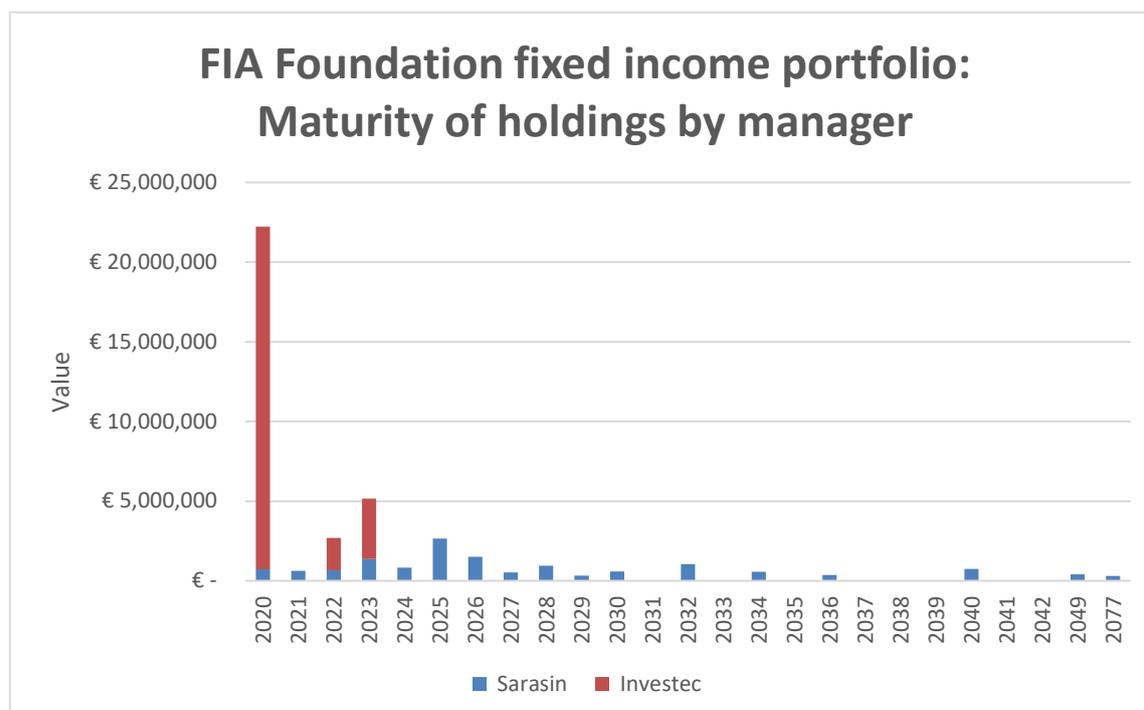

The maturity of the fixed income portfolio is shown below:

Manager	Value of the bond portfolio €000's	Number of holdings	Book maturity
Investec	27,388	9	2 years and 4 months
CCLA	1,730	*	Not applicable
Sarasin	14,171	38	9 years and 11 months
<b>Total</b>	<b>43,289</b>	<b>47</b>	4 years and 11 months

Note: Actual maturity or redemption is likely to be shorter than the “book” redemption date stated when the fixed income product is purchased, as many fixed income positions are “callable” before maturity. This is particularly common with longer-dated issues and it has a significant impact on how they behave and are priced. The early redemption is factored into each managers purchasing decision.

\*The Foundation invests in units in the COIF Charities Investment Fund rather than direct investment into fixed income positions. The value above is the Foundation’s share of the fixed income positions held in the fund.

Maturity by manager is shown in the graph below:

### Portfolio beta

The portfolio beta is a measure of a portfolio's volatility. A beta of 1 means that the portfolio is neither more nor less volatile or risky than the wider market. A beta of more than 1 indicates greater volatility while a beta of less than 1 indicates less.

The portfolio beta by manager for each of the portfolios is as follows:

	Investec	CCLA	Sarasin	Total
Portfolio Beta	1.07	1.0	1.17	1.08

Overall the beta of the portfolio is less than 1, indicating that the volatility of the portfolio is slightly greater than the wider market.

### Income yield from the portfolio

Income received from the investment portfolio is as follows:

	Estimated 31/12/19 € 000's	Year ended 31/12/18 € 000's	Year ended 31/12/17 € 000's	Year ended 31/12/16 € 000's
Investec	3,929	3,507	3,126	3,140
CCLA	3,805	-	-	-
Credit Suisse	-	*1,581	2,245	2,377
Sarasin	2,394	2,167	2,128	2,423
	10,128	7,255	7,499	7,940
Rental Income**	500	386	466	513
Investment income from bank deposits	5	8	50	2
	<b>10,633</b>	<b>7,773</b>	<b>8,015</b>	<b>8,455</b>
Yield on share portfolio	2.6%	2.1%	2.0%	2.1%
Yield on investment properties	6.0%	3.7%	6.7%	6.9%

\*Represents income from 1 January 2018 until 12 July 2018 when the mandate was withdrawn.

\*\*Rental income was reduced during 2018 as floor 2 of Trafalgar Square was unoccupied. This has now been let to Ember Group Limited, who also rent floor 1.

The Foundation adopts a total return investment policy. Therefore, the income requirement for any year can be met by a combination of income and capital growth.

## Property

The Foundation owns one property – Trafalgar Square. The property is held partly as an investment and partly as a fixed asset reflecting the use of part of it as office space.

The accounting requirement is for professional valuations every 5 years with consideration being given to the value by the Board annually. A desktop valuation was undertaken for the year ended 31 March 2019.

Montagu Evans reported that the estimated value of the property was £13,200,000. (Cost: £9,400,000, 2017: £13,100,000). The sterling valuations have been translated to Euro using the exchange rate prevailing as at 31 March 2019.

The Euro value of the property has increased to €14,695,000 (2017: €14,759,000). This represents a valuation gain of €113,00 and an exchange rate loss of €177,000.

This valuation has been incorporated within the Financial Statements in 2018 as the best estimate of the value of properties at the year end.

## Summary

The total value of the Foundation's investments at 31 March 2019 (shares, property and cash deposits) compared to the value as at 30 June 2006 (the inception of the total return investment policy) is as follows:

	<b>31 March 2019</b>	<b>30 June 2006</b>
	<b>€000's</b>	<b>€000's</b>
Managed portfolios	383,697	307,820
Property –Trafalgar Square	14,695	11,393
Cash deposits	11,805	15,784
<b>Total</b>	<b>410,197</b>	<b>334,997</b>
Increase	22.6%	
Withdrawals (from 30 June 2006)	155,824	

## Historical data – Total Returns comparison since 31 December 2018

The Foundation reviews Investment Manager total return on a cumulative basis.

Comparisons are made from 31 December 2018 which is the date when the Foundation started to assess the performance of CCLA following their appointment.

Cumulative total return will continue to be monitored to identify any significant variations between managers.

### Historical Data - Reserves

The long term objective of the reserves policy of the trustees is to “preserve the capital base in real terms for as long as is practicable whilst meeting the needs of the beneficiaries at a sustainable level”.

With this objective in mind the Foundation also reviews the value of the portfolio compared to the growth in the European Harmonised Index of Consumer Prices (HICP).

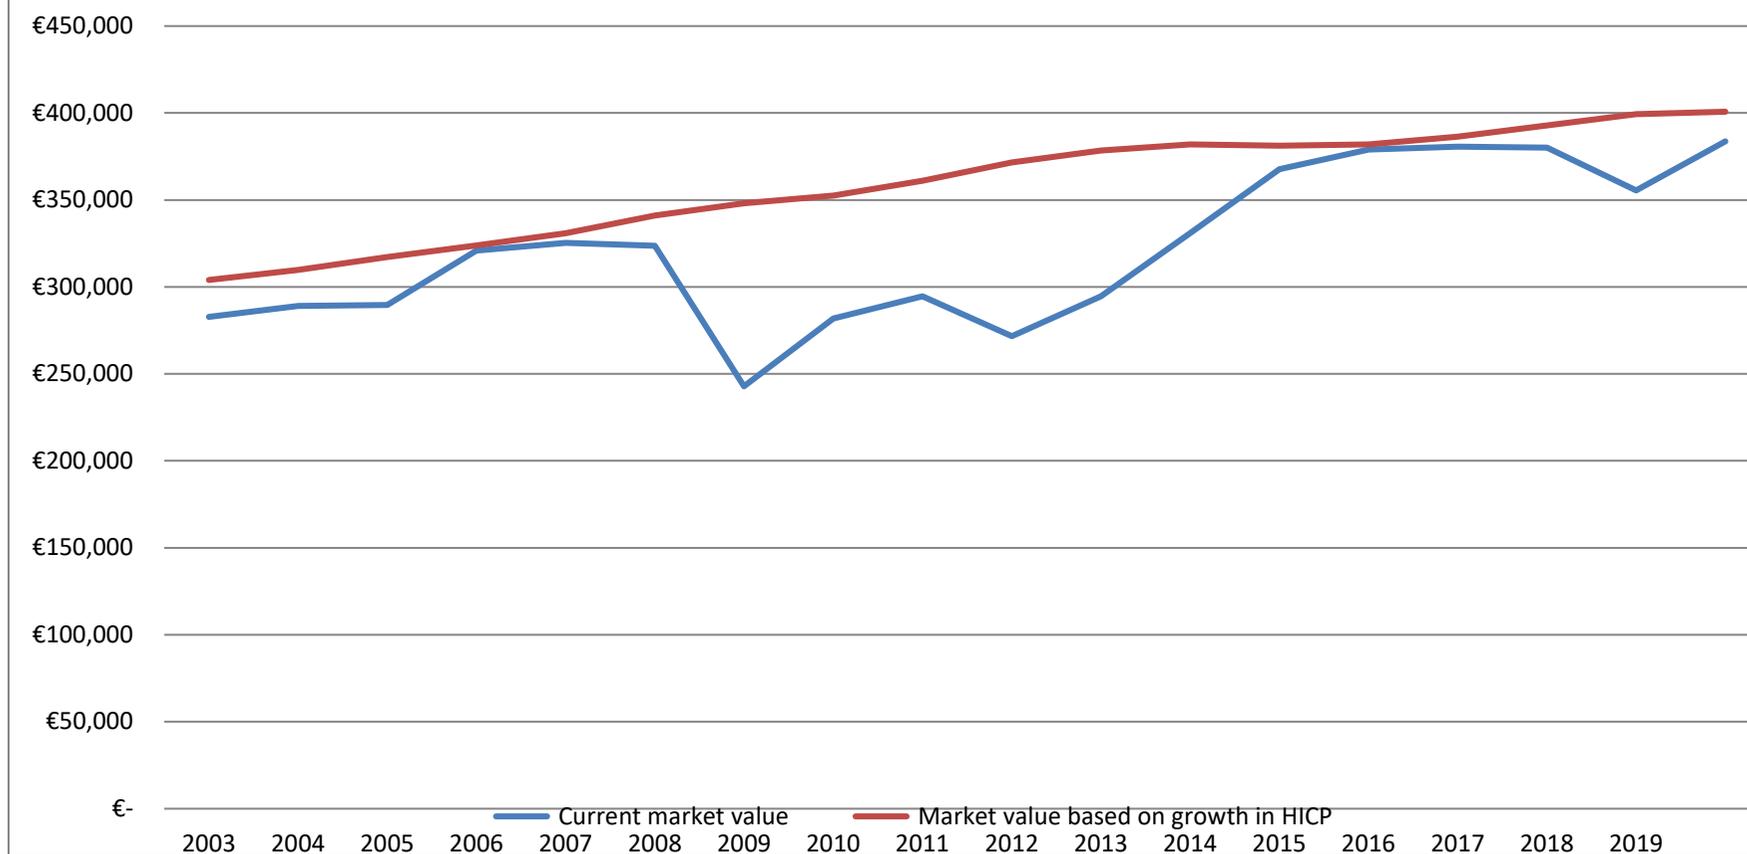

The value of the portfolio compared the expected market value based on the growth in HICP is:

Year	Market value of the share portfolio €000's	Percentage growth/ (decrease) in the portfolio (after withdrawals)	Market value based on growth in the HICP €000's	Difference in actual and anticipated values €000's	Expenditure during the year €000's
2001	-	-	-	-	54
2002	<sup>^</sup> 310,596	-	310,596		
2002	282,721	-9.0%	304,007	(21,286)	7,734
2003	288,989	2.2%	309,778	(20,789)	10,585
2004	289,581	0.2%	317,119	(27,538)	9,968
2005	320,971	10.8%	323,883	(2,912)	13,008
2006	325,379	1.4%	330,872	(5,493)	14,329
2007	323,696	-0.5%	341,034	(17,338)	13,244
2008	242,855	-25.0%	348,183	(105,328)	11,285
2009	281,835	16.1%	352,607	(70,772)	16,056
2010	294,546	4.5%	361,028	(66,482)	12,540
2011	271,763	-7.7%	371,668	(99,905)	15,058
2012	294,642	8.4%	378,361	(83,719)	11,710
2013	330,869	12.3%	381,979	(51,110)	11,676
2014	367,611	11.1%	381,216	(13,555)	12,328
2015	379,036	3.1%	381,292	(2,256)	17,594
2016	380,565	0.4%	386,409	(5,844)	19,237
2017	380,096	-0.1%	392,901	(12,805)	18,788
2018	355,516	-6.5%	399,344	(43,828)	20,650
2019	383,697	7.9%	400,742	(17,045)	

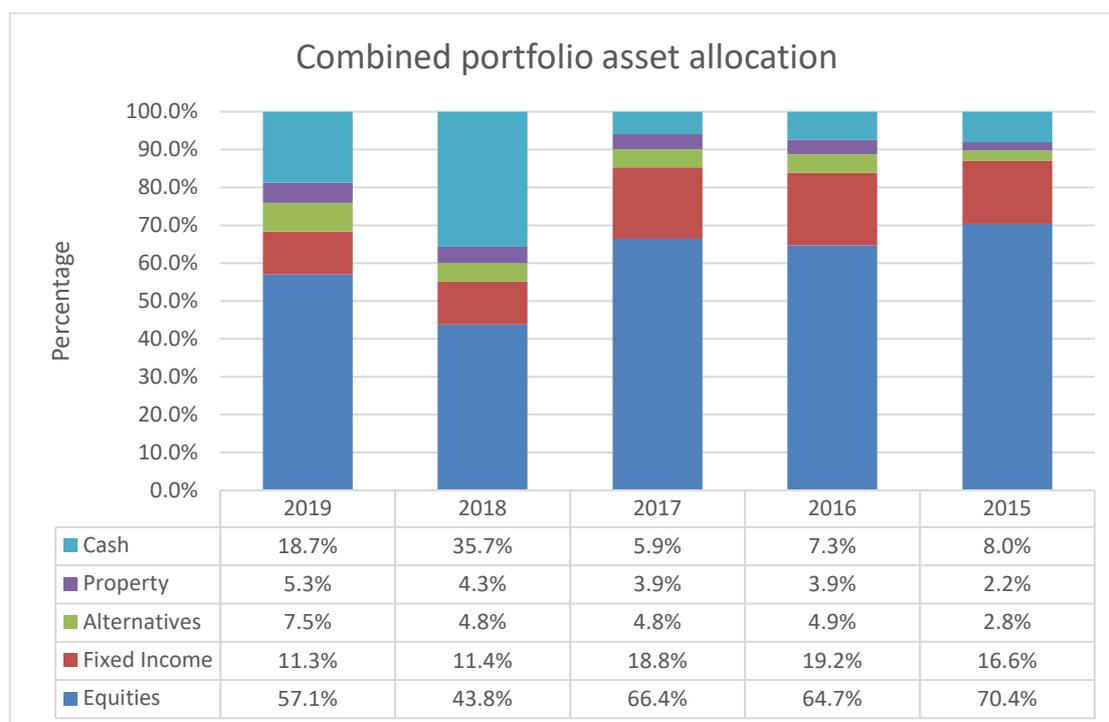

<sup>^</sup> amount transferred to the fund managers in 2002

The difference between actual and HICP expected values will continue to be monitored.

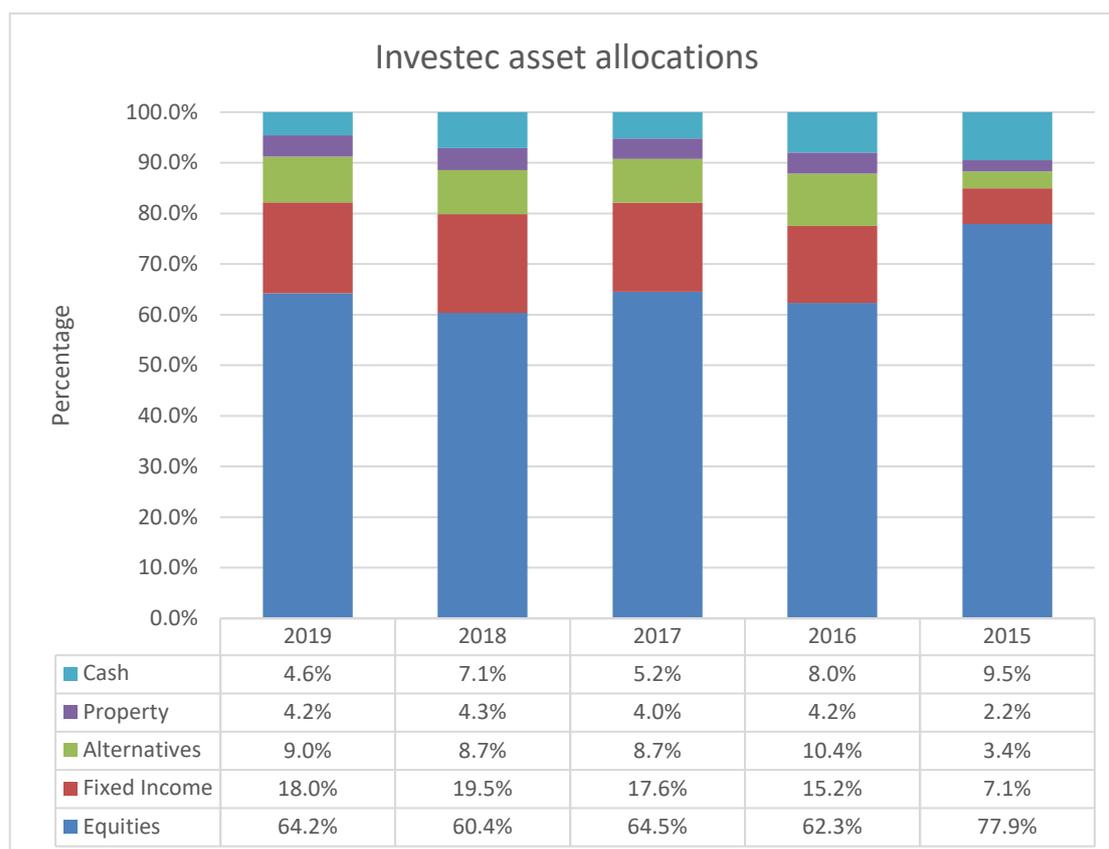

## Current market value v market value based on growth in the European Harmonised Index of Consumer Prices (HICP) ('000's)

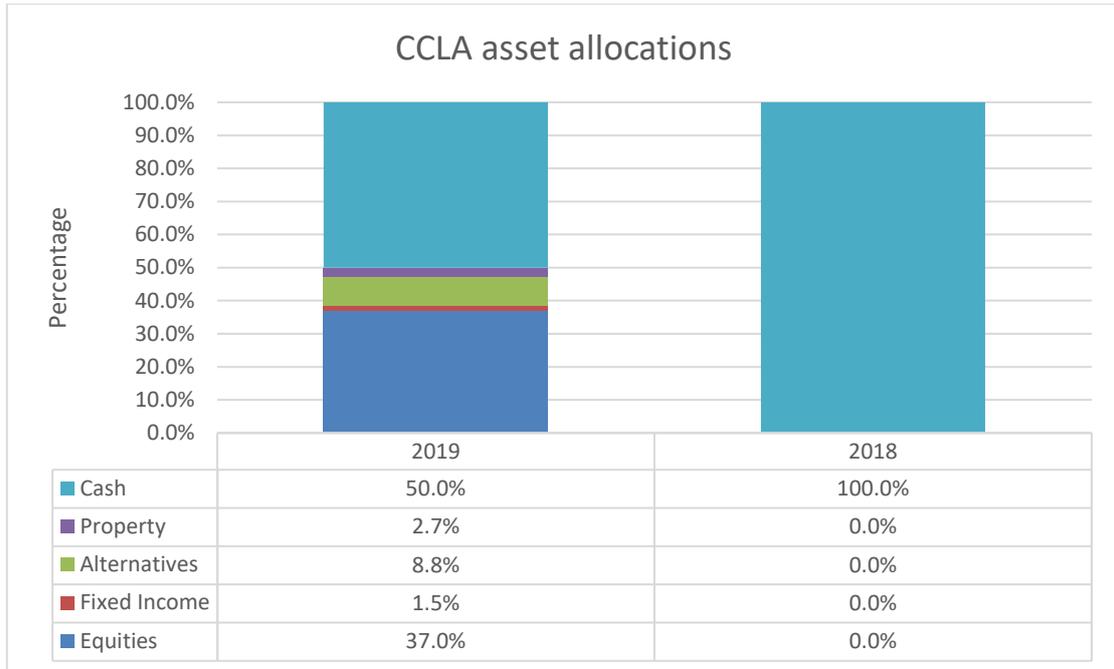

## Historical Data – Asset Allocations

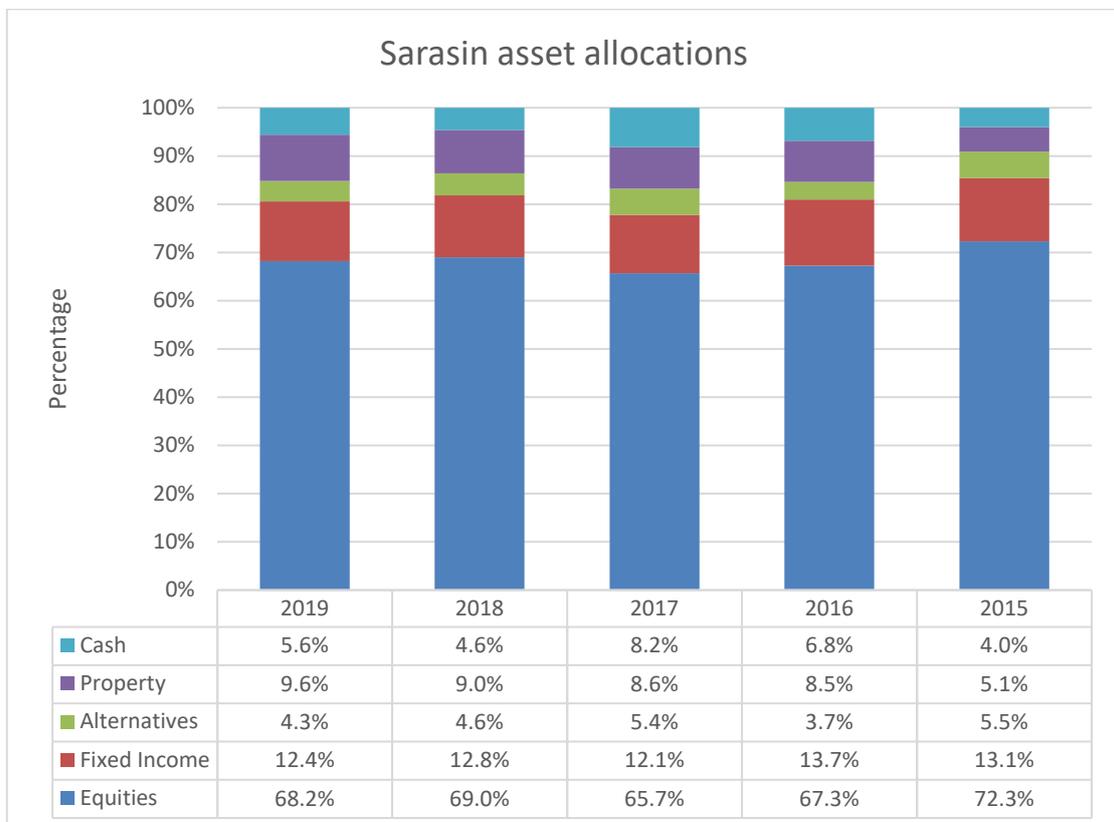

Note: In 2018 the mandate for Credit Suisse was withdrawn and the portfolio was liquidated, hence the large cash holding.

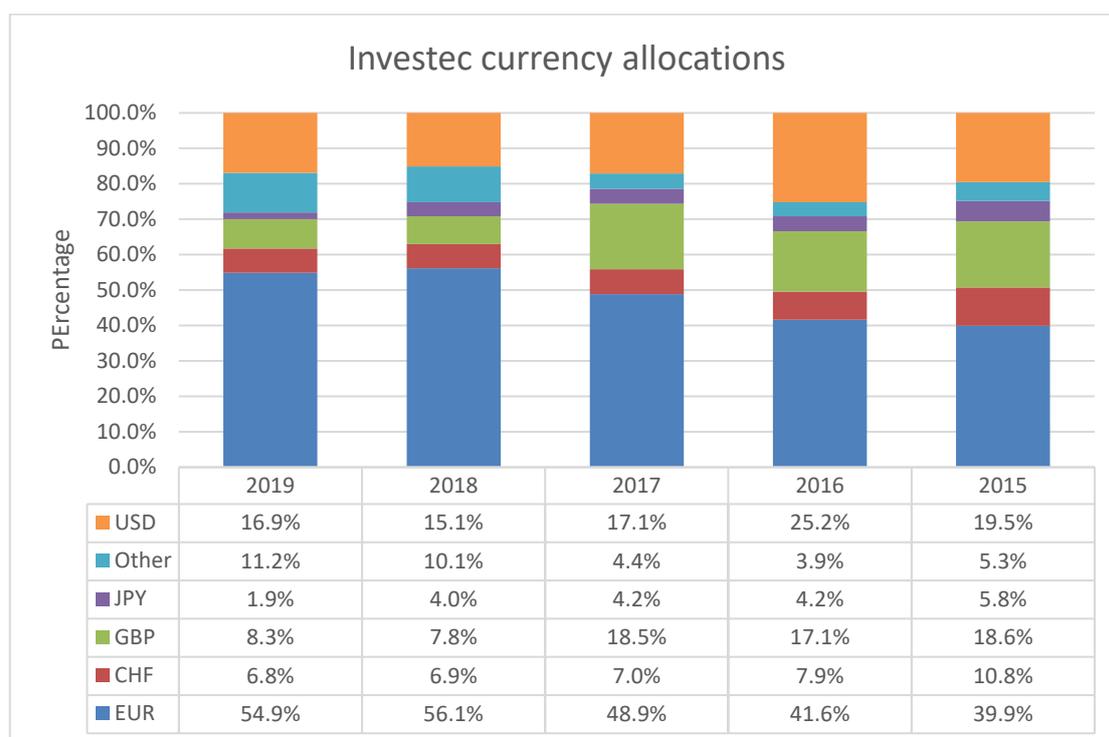

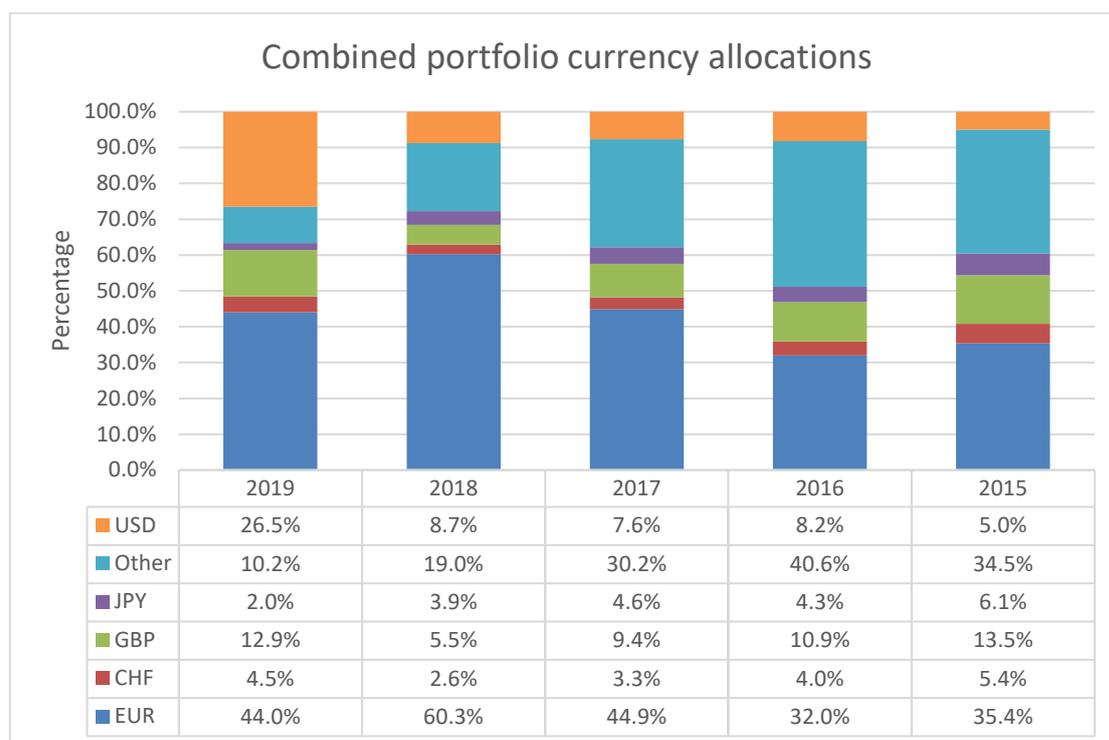

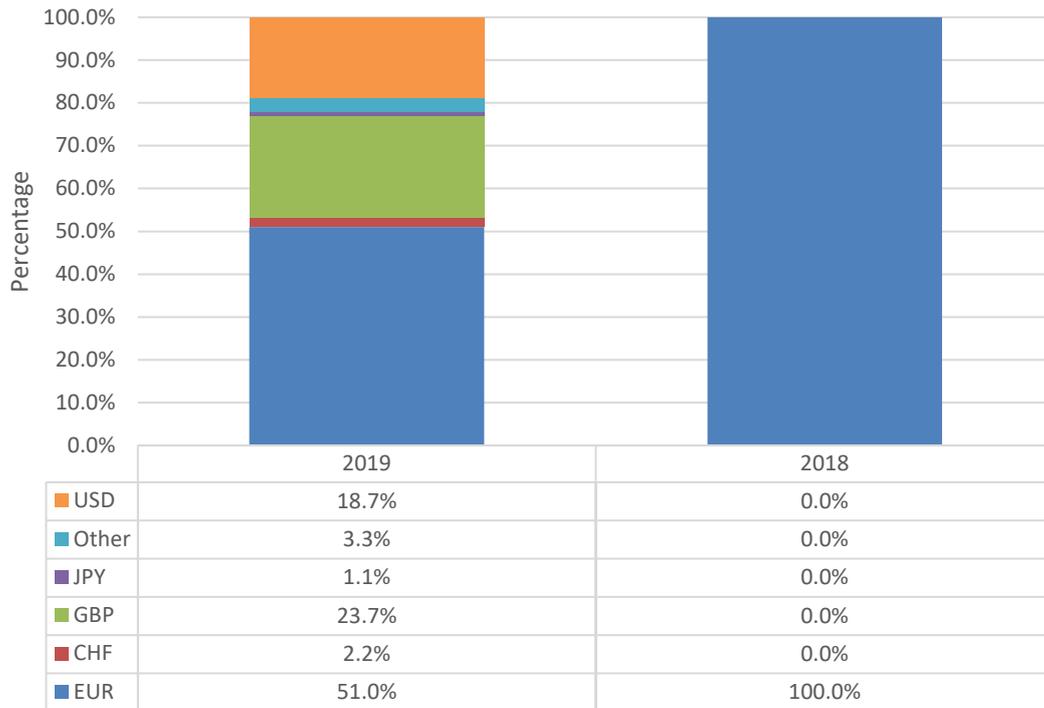

Note: At 31 March 2018, €56 million was held in cash at Credit Suisse. This was transferred to CCLA in May 2019.

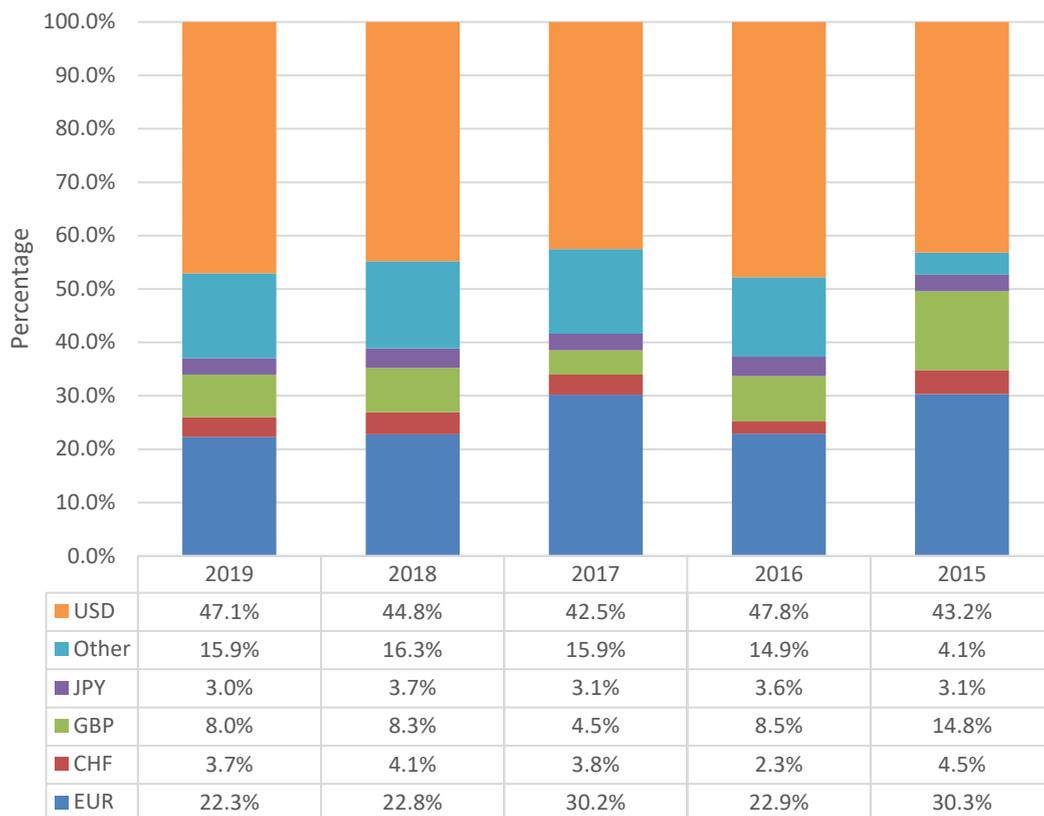

## Historical Data – Currency Allocation

### CCLA currency allocations

### Sarasin currency allocations

### Historical Data - Value of the portfolio and the level of cash withdrawals

The Foundation has adopted a prudent approach to cash withdrawals in recent years. As a result the market value of the portfolio has surpassed levels achieved in the 2006-2007.

	<b>Market value of the share portfolio €000's</b>	<b>Cash holdings at the beginning of the period</b>	<b>Withdrawals</b>
2002	282,721	-	-
2003	288,989	5,924	3,816
2004	289,581	3,440	5,732
2005	320,971	9,934	14,304
2006	325,379	8,508	14,420
2007	323,696	12,111	17,006
2008	242,855	16,698	10,275
2009	281,835	17,857	3,000
2010	294,546	7,050	13,384
2011	271,763	9,568	9,789
2012	294,642	7,615	14,427
2013	330,869	11,127	10,580
2014	367,611	13,610	6,000
2015	379,036	8,256	22,572
2016	380,565	18,124	12,579
2017	380,096	13,327	17,743
2018	355,516	17,813	15,584
2019	383,697	14,827	

The Foundation reviews the level of uncommitted cash balances held at the year end to determine the required cash withdrawals for each year.

The total withdrawal from the portfolio of €16,550,000 represents 4.6% of the value of the portfolio.

### Historical Data - Unrestricted Fund Expenditure

The investment portfolio returns are used to fund unrestricted funds expenditure. Since 2012 the Foundation has awarded multi-annual grant agreement to our major partners. The Foundation will continue to balance expenditure with the aim of increasing the value of the portfolio in line with inflation.

Since inception unrestricted fund expenditure has been as follows:

	Grants awarded to third parties €000's	Designated reserves expenditure (internally managed projects) €000's	Administrat- ion costs €000's	Investment management Fees €000's	Total €000's
2001			54		54
2002	4,130	355	2,256	993	7,734
2003	5,561	1,618	2,381	1,025	10,585
2004	5,479	1,074	2,113	1,302	9,968
2005	6,772	2,779	1,922	1,535	13,008
2006	7,663	2,983	1,906	1,777	14,329
2007	7,571	1,960	2,039	1,674	13,244
2008	5,269	1,990	2,343	1,683	11,285
2009	8,747	3,818	2,376	1,115	16,056
2010	6,761	2,176	2,496	1,107	12,540
2011	8,407	2,449	2,614	1,588	15,058
2012	6,265	1,382	2,576	1,487	11,710
2013	6,597	1,144	2,477	1,458	11,676
2014	6,654	1,711	2,189	1,774	12,328
2015	12,523	2,045	1,399	1,627	17,594
2016	12,802	1,539	3,300	1,596	19,237
2017	13,300	1,477	2,359	1,652	18,788
2018	14,362	1,804	2,834	1,651	20,651
<b>TOTAL</b>	<b>138,863</b>	<b>32,304</b>	<b>39,699</b>	<b>25,044</b>	<b>235,910</b>
<b>Percentage</b>	<b>58.9%</b>	<b>14.7%</b>	<b>15.8%</b>	<b>10.6%</b>	<b>100%</b>

Grants have been awarded as follows:

	<b>Grants awarded to FIA/FIA Institute €000's</b>	<b>Grant Awarded to FIA member clubs €000's</b>	<b>Sub total – FIA related grants €000's</b>	<b>Grants awarded to others €000's</b>	<b>Total grants awarded €000's</b>
2002	930	711	<b>1,641</b>	2,489	<b>4,130</b>
2003	2,514	624	<b>3,138</b>	2,423	<b>5,561</b>
2004	3,365	779	<b>4,144</b>	1,335	<b>5,479</b>

## ANNEX II

Investec Wealth and Investment Limited

## FIA FOUNDATION

**Value as at 29 March 2019 €152,155,408**

### Investment Objectives

To produce an annual income of about €3m net of management charges and any irrecoverable tax, whilst maintaining the value of the fund in real terms over the long term, using the Consumer Price Index for Europe as the inflation benchmark.

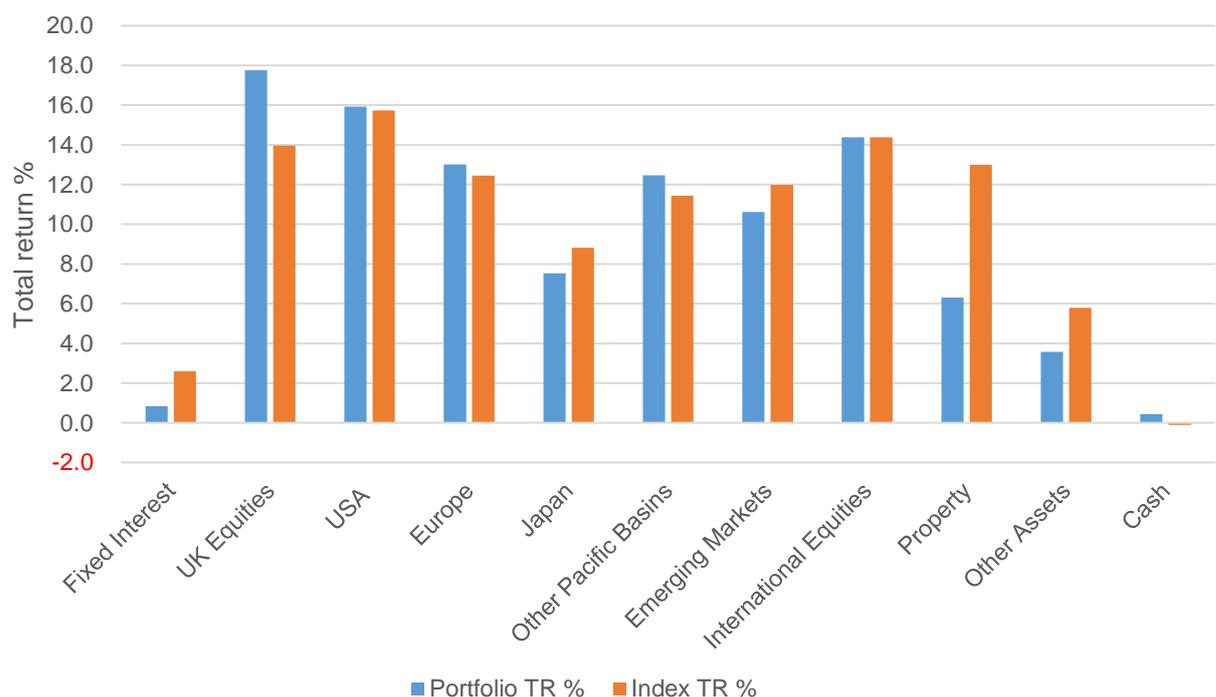

### Benchmark

We view the objective as a total return target and performance is measured against the following benchmark – 12.5% BofA Merrill Lynch All Euro Government (5-10 Y) EUR, 7.5% BofA Merrill Lynch Euro Corporate EUR, 35% MSCI Europe ex UK (Net) EUR, 25% MSCI AC World Ex Europe, 5% FTSE/EPRA NAREIT Europe Ex UK, 10% IWI EUR Alternatives Composite, 5% Eurozone Main Refinancing Operations Minimum Bid Rate EUR (-0.5%).

### Performance (All figures are gross, time weighted total return, net of cash withdrawals)

	<u>2019 Q1 %</u>	<u>Ytd.%</u>	<u>12 month %</u>	<u>Dec 2012 %</u>
Portfolio	+8.95	+8.95	+6.85	+67.45
Internal benchmark	+9.73	+9.73	+6.35	+62.06
Portfolio Beta	1.0			
HICP	1.4			

### **Asset Class Performance Q1 2019**

## Market Comments

The contrast between 2018 and the first quarter of 2019 is quite astonishing. Whereas 2018 has gone down in the annals of history as one of the most difficult for investors to navigate, with very few asset classes generating positive returns, this year so far has delivered very much the opposite experience. Equities, bonds and commodities have delivered gains pretty much across the board. One might be forgiven for thinking that this is evidence of great optimism about the future, either politically or economically, but that is not necessarily the case. In reality, markets became too gloomy about prospects towards the end of last year, and the effect of that mind-set was exacerbated by thin trading around the Christmas holidays. Now markets have rallied in the realisation that things weren't as bad as was being discounted in valuations.

That is not to say that there haven't been some helpful developments. Foremost amongst these has been the fact that central banks in both the US and Europe have put off plans to continue tightening monetary policy. Indeed, futures markets in the US now predict the next interest rate move to be a cut sometime later this year. The risk of a withdrawal of liquidity has also been mitigated, with the US Federal Reserve (the Fed) deciding to leave its balance sheet much larger relative to the overall size of the economy than it was before the initiation of Quantitative Easing required in the aftermath of the financial crisis. The European Central Bank (ECB) has similarly promised to extend the special lending facilities it made available to the banking sector following the euro zone crisis.

Of course, neither central bank would have made such decisions if economies were booming. The truth is that growth remains frustratingly lacklustre, especially following the rare burst of synchronised global expansion that we witnessed in 2017. Although at the time it was heralded as something of return to "business as usual", as companies and consumers finally threw off the shackles of austerity, it now appears to have been a more temporary phenomenon. High debt levels across the world and the rise of a brand of politics that is less friendly to the creation and retention of wealth suggest lower sustainable levels of growth in future.

This sentiment has been reflected in the nature of this year's recovery. Equity markets in aggregate have seen minimal inflows of new money, with buybacks by US corporations continuing to be the greatest source of demand for shares – a phenomenon that brings its own risk from higher leverage as companies tap credit markets for funds. It is notable that defensive sectors have generally outperformed cyclical ones, and that growth has continued to outpace value as an investment style. The renewed fall in bond yields also speaks to an underlying lack of confidence in the future.

It has been pointed out that such a strong simultaneous rally for both bonds and equities is inconsistent, but the composition of the rally suggests that, once again, investors are unsure of what lies ahead and are seeking companies with such characteristics as a strong growth outlook, a high return on capital, or a generous and growing dividend yield. Reflecting developments in the real world, this continues to widen the gap between the "haves" and the "have nots".

In a parallel universe this commentary is being written in a post-Brexit United Kingdom, but, of course, the long-planned date of departure has passed with no resolution. Although Brexit is the hottest of topics across all domestic media and many investment commentaries, it is difficult to add much value to what has turned into the most infuriating, and yet at the same time endlessly fascinating, process. With Parliamentary votes taking place on a nearly daily basis, it is almost inevitable that what is written in this commentary will be outdated by the time it is read – and that even allows for the modern miracle of digital distribution! Many large UK companies earn their crust beyond these shores, and so will be minimally impacted at the operational level whatever the outcome (although their reported profits will be subject to the effect of a potentially big move in the pound). In the same vein, our investments in a range of non-UK stocks and international funds limits the exposure to any shocks to the domestic economy. We currently see insufficient clarity or value to bet heavily in any direction on the outcomes, which, at the extremes, range from a chaotic "No Deal" Brexit to no Brexit at all.

## Key Influences

At its simplest, successful asset allocation can be reduced to the correct response to the interaction of just two forces: liquidity and growth. Liquidity covers a number of factors, including: interest rates; the dynamics of central bank balance sheets; the propensity of commercial banks to extend credit; the balance between buyers and sellers in asset markets. Growth speaks for itself. When the provision of liquidity is generous and growth is strong (and, perhaps more importantly, being upgraded), markets tend to do very well. This was very much the case in 2017. Most of the time there is a bit more tension between the two forces. If growth is very strong, central banks will tend to rein back liquidity to head off any threat of overheating. This will eventually put a brake on growth. On the other hand, the same central banks will loosen policy in response to a slowdown, thus providing the promise of future recovery. In both of these environments, there can be something of a battle between bulls and bears, but the damage will be relatively limited, and often equity markets will continue to grind out positive returns.

The worst conditions for investors are when liquidity is being tightened in the face of falling growth expectations, and that is where we found ourselves in the fourth quarter of last year. The experience was painful, although mercifully short. Central bankers, notably at the Fed and the ECB were (eventually) alert to the risks, preventing further falls in equity and credit markets. The good news, for now at least, is that they remain in a watchful but patient mode, and have effectively promised to keep policy settings unchanged until the evidence supports another shift, in whatever direction that might be. However, there is still a lively debate within the market as to whether the next move in US rates will be up or down, and so there is still room for more volatility.

The growth picture is murkier, but we are reasonably optimistic that the worst of the growth scare is behind us. Lower bond yields in the US have pushed mortgage rates back down, lending support to the housing market. At the same time a tight US labour market is delivering decent wage growth, with, thus far at least, minimal signs of it feeding through to price inflation. It also helps that we see no sign of the sorts of excesses building up in the economy that made the last two downturns so punishing. On the other side of the world, China has been delivering policy stimulus to the economy since last summer, and there are tentative signs that this is beginning to bear fruit. Europe is the cylinder that refuses to fire, but even here there is some optimism that the one-off factors that have blighted Germany's economy will reverse. Even so, a febrile political environment and the legacy of a dysfunctional banking sector suggest that growth will struggle to match that in the rest of the world.

A wildcard in the growth hand is the outcome of trade talks between the US and China – talks which, in fact, encompass a lot more than trade and might well define the relationship between the two global superpowers for years to come. A swift and mutually beneficial exchange of signatures on a deal before the end of April could set risk markets up for a pleasant run into the summer. An escalation of tensions would have a more negative effect. On balance we believe that it is in neither side's interest currently to escalate the dispute, but, not for the first time in recent years, our fate lies in the hands of politicians.

## Markets - Europe

Europe is trying hard to replace the UK at the top of the political dysfunction league table, with populist parties and more extreme policy promises dominating the agenda. Elections for the European Parliament in May threaten to deliver more seats into the hands of anti-establishment parties who will try to wrest back power from Brussels. Given the uncertainty, international investors are giving Europe a wide berth. As with the UK, this might present an opportunity to increase exposure, but for the fact that the region in aggregate still struggles to generate much growth. There is a suspicion that Europe has spent so much time navel-gazing over the last decade that it has structurally fallen behind the US and China, the two other main engines of global growth. More positively, the ECB has followed the lead of the US Federal Reserve in curtailing its policy tightening.

## US

Following a torrid final quarter in 2018, US equities have recovered strongly in 2019, with Technology stocks once again being a major component of the gains. It is now clear that investors were pricing in much too sharp a slowdown last December, and so the recovery has an element of normalisation about it. The Fed's decision to take its foot off the monetary brake has been a strong support, as has expectation that there will not be an escalating trade war between the US and China. However, we have to acknowledge a sharp deceleration in corporate profit growth as the benefits of past tax cuts recede and the economy settles into a lower growth trajectory.

## UK

UK equities, while having started to perk up, are still subject to Brexit sentiment swings and the influence on sterling. Companies more exposed to the domestic economy have benefitted from the gradual easing of "No Deal" fears, but, without a final resolution, confidence remains low. Overseas investors still view the UK as too treacherous to navigate. Such uncertainty offers opportunities to those willing to take a bet on the outcome, but there has been insufficient clarity for us to wish to increase exposure yet. The consequences of a chaotic departure from the EU in April could be extremely negative, both for the pound and the domestic economy.

## Japan

Japan has a structural problem second to no other major developed country – a shrinking and rapidly ageing population. These pressures were exacerbated by an appalling typhoon in the autumn of 2018 as well the country's close trading relationship with China, which has been in a cyclical slowdown. These latter elements should have less of an effect in the near future, allowing for further recovery. Japan remains home to a relatively high number of companies that look exceptionally cheap; some with immense cash balances that are the result of years of caution. Corporate governance developments and the increasing influence of activist investors raise hope that this value will be recognised. Meanwhile Japan has an outstandingly stable political environment, which should count for something in today's uncertain world.

## Emerging Markets

Emerging Markets is a misleading generic label for a list of countries that covers Central and South America, Eastern Europe, parts of Africa and most of Asia. Some are driven primarily by domestic consumption, others by the exports of manufactured goods and many by the production of commodities. And yet they often move together, unified by their sensitivity to US interest rates and the dollar, given that much EM debt is financed by dollar-based investors. The dominant influence remains China, which has been weathering a period of cyclical slowdown. However, it appears that more stimulatory policies enacted by China's government are beginning to have an effect, improving sentiment across the EM complex.

## Fixed Income –Europe

The Continent has exhibited a disappointing economic performance in the past nine months after the more encouraging recovery that sprang into life during the winter of 2017/18. Germany, which had suffered badly last summer due to issues affecting car production, clambered back into positive territory in Q4 but Italy and Greece both experienced their economies shrinking. Only Spain demonstrated robust growth during the autumn, in fact faster than in Q3, and ended the year with growth of 2.5%. Eurozone growth was a mere 0.2% for the final quarter, making 1.8% for the full year, the lowest annual rate for four years. Nevertheless that growth was sufficient to enable another decline in the level of unemployment, which is now under 8% compared with more than 12% at the peak back in 2013. Forecasts for growth in the forthcoming year have edged down from about 1.5% to 1.3% since the New Year and recent comments from Mr Draghi at the ECB indicate that the likelihood of an increase in interest rates this year is now negligible. Although there is little sign of fears of deflation being rekindled, with forecasts for headline inflation remaining stable at 1.5% (thanks

to faster German wage growth offsetting weaker activity elsewhere), the rhetoric from the ECB has become noticeably softer in recent months.

The period during which interest rates will be held at current levels has been pushed back in the market's eyes to next winter from the autumn (thanks in part to potential impact from Brexit uncertainty and in part to fears around tariffs and loss of trade with China). Additionally the forthcoming European elections in May will be a test for incumbent Governments and the ECB will want to ensure a supportive framework of economic stability over the next few months. To that end, they will need to consider how to manage their long term refinancing operations as the three year period of loans is due to expire during this summer. Many of Europe's weaker banks remain dependent on these loans, so markets expect the scheme to be rolled over, though potentially for only a further two years.

Despite lowered forecasts for economic growth, estimates for corporate profits have remained relatively resilient with consensus projections for about 7-8% increase this year, slightly higher than for global equities as a whole. The chart here illustrates how depressed earnings are for European companies and how much recovery potential there is if and when the economic climate is more propitious. Return on equity has improved markedly in the past couple of years, from below 9% to more than 11%, and yet share prices were barely higher from end-2016 levels until this last quarter. Although the prospective rating at 13.5X is at first sight not that cheap, the market does offer a dividend yield of 3.5% which is highly attractive compared with sovereign bond yields close to zero across much of the continent and the maturity curve.

It is likely however that Europe may stay comparatively cheap for a while, as there are a number of clouds that can deter the marginal investor who currently is adopting a more risk averse strategy. First there is the potential collateral damage that might result from a messy exit by the UK from the European Union; second is the role of domestic politics within the Continent, as there are elections due in the near term which might produce a more populist response from the electorate and, further down the line in the autumn, it is quite feasible that the Italian Government may try once again to implement a much looser fiscal policy; finally the key roles at the helm of the three key European institutions (the ECB, the European Commission and the European Council) are all up for change.

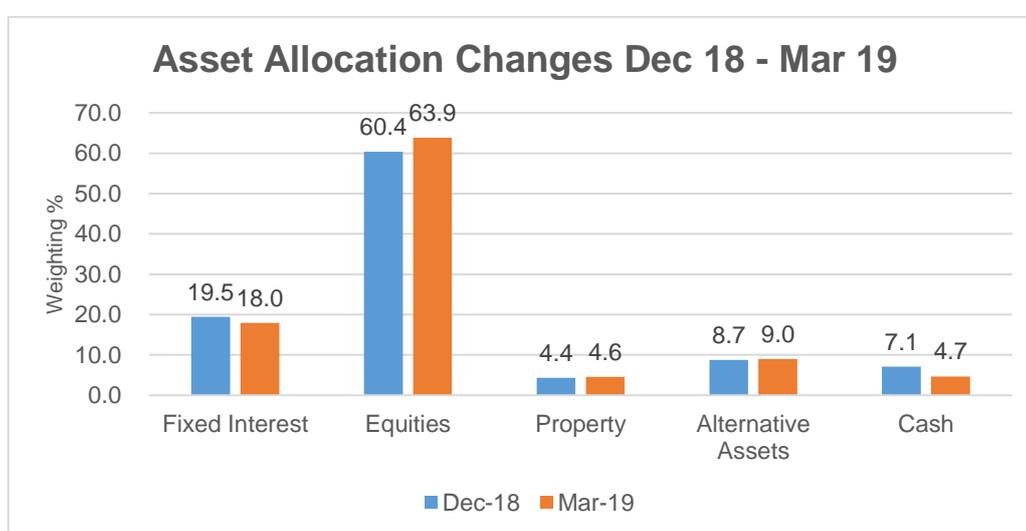

### Bond Markets

The tone of future monetary policy from the world's two principal Central Banks, the US Fed and the European Central Bank (ECB) has become noticeably less hawkish than investors perceived likely last Christmas. Both the path of interest rates over the next couple of years and, in the case of the Fed, the implications of the change in its own balance sheet intentions have enabled bond market investors to justify lower bond yields than previously. During this quarter the redemption yield on 10yr US Treasuries fell by more than 25bp to less than 2.5%, while 10yr gilt yields dropped by a similar amount to a mere 1% and German 10yr Bunds experienced an even more dramatic move, with yields adjusting by 30bp to re-enter negative territory, ending

March on -0.07%. By the end of the quarter an estimated \$10trn of sovereign bonds had yields below zero, in other words investors were paying to lend money to those governments.

Much of this movement occurred in March when the Fed published its latest statement of monetary policy; the contrast between that wording and releases made late last summer by its head Jerome Powell led a number of economists to christen the change as “capitulation”: the Fed has gone from forecasting a further four or five interest rate rises to implying that the cycle of increases is at an end, whilst simultaneously bringing to an end its balance sheet reduction programme sooner than markets had expected. Similarly, the ECB held rates unchanged in the face of a slowing Eurozone economy, and suggested no change until year end. The central bank also announced a new lending program for banks, targeted longer-term refinancing operations, to start in September and last for two years. Mario Draghi looks set to end his 7 year term without ever having raised interest rates. The low level of sovereign yields meant that a move of 25bp created capital gains of more than 2% in the market prices of 10yr bonds.

## Portfolio Comments

The portfolio recovered by nearly 9% in euro terms over the period, which compares to a 9.73% return for the internal benchmark. Over the rolling twelve months the return is 6.85% versus 6.35%.

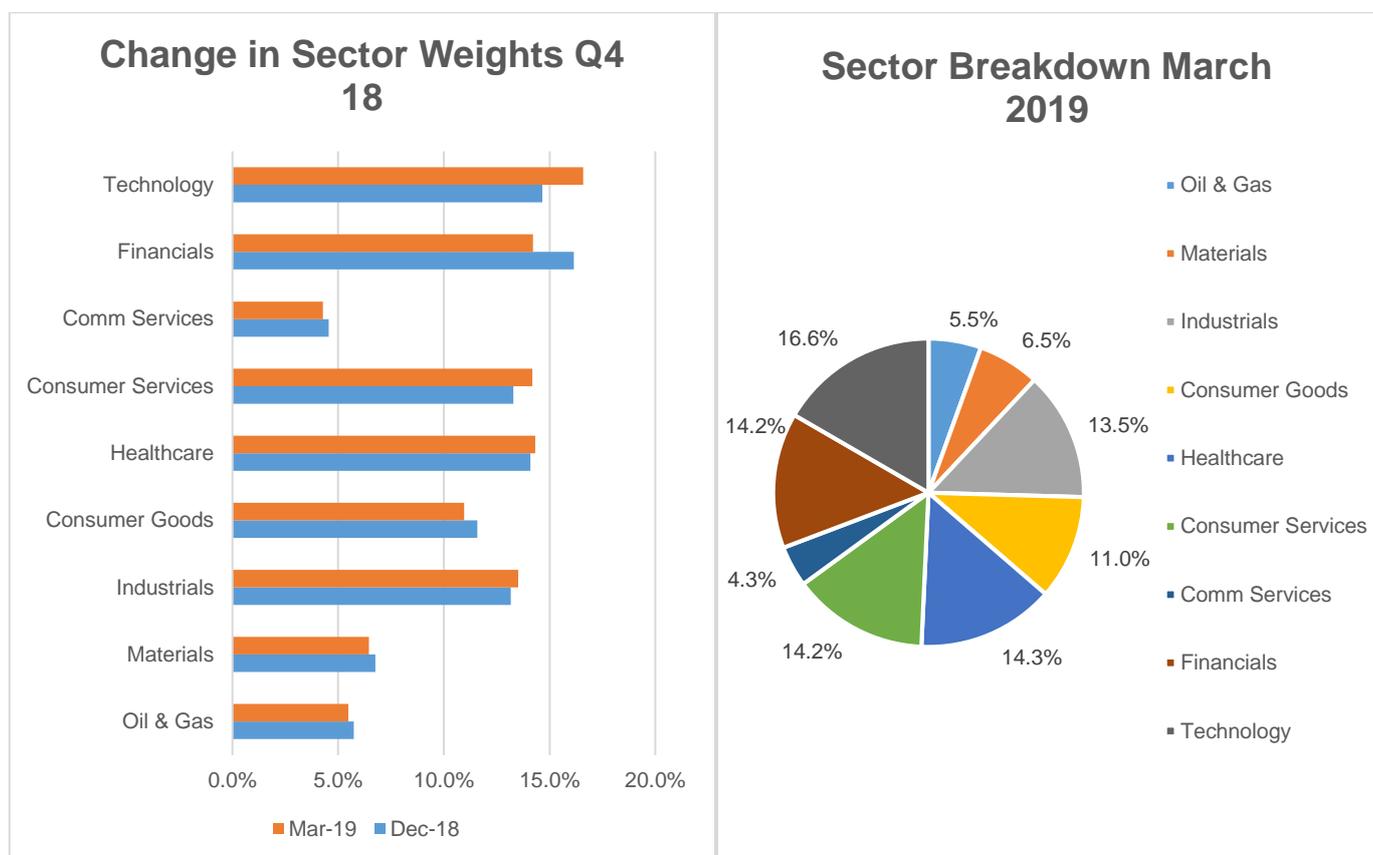

The quarter was all about growth companies outperforming helped by the Federal Reserve taking a ‘wait and see’ approach to further interest rate rises. The US led on regional performance with a 15.7% return in euro terms and Asia, Emerging Markets and Europe saw moves of a similar magnitude between 11.5% and 12.5%. Japan was the laggard, managing an 8.8% return in euros. Bond yields continued to fall on slowing growth expectations and the ten year German bund yield moved back into negative territory again for the first time since 2016 moving from 0.24% to -0.07% over the quarter. Currencies were little moved with the trade weighted euro average down 2.1% and the trade weighted dollar fractionally lower. The pound saw a 4.5% appreciation versus the euro as a ‘no-deal’ Brexit became less of a probability.

Stock selection in UK equities generated the best absolute and relative performance with an 18% return compared to 14% for the UK market. More economically sensitive companies outperformed on hopes of a breakthrough in US/China trade talks and the possibility that UK equities were overly discounting the risk of a hard Brexit. Top performers included Rio Tinto (+36%), new addition Halma (+27%) and building materials company CRH (+21%). European equities were another positive contributor to relative performance on stock selection with consumer related companies outperforming on solid results. Encouragingly, many of these names reported strong growth coming from Asia and Emerging Markets, such as LVMH, Heineken, Nestle and Remy, which all returned over 20%. Zalando continued its recovery and was the best performer in Europe with a 55% return. US equities managed a near 16% gain, marginally better than the S&P 500, with healthcare and technology names outperforming. Drug developer, Celgene, received a bid from Bristol Myers (+50%)

and Danaher (+30%) produced some excellent results ahead of market expectations along with the acquisition of GE's biopharma business for \$21.4bn. GE Biopharma is a pre-eminent provider of instruments, consumables and software used in the drug discovery process.

Our non-equity positions in fixed interest, property and alternatives were the biggest detractors from relative performance. Being underweight in longer duration government and corporate bonds meant we underperformed in fixed interest and the property and alternatives holdings collectively underperformed their relative benchmarks, which saw a material move higher over the quarter.

The overall equity weighting increased to a fraction under 64% over the quarter from just over 60% at the year end. We continued to add to equities, as we had in December, focusing on our preferred names and new opportunities at more attractive prices. Nestle, for example, managed a 20% return since we increased the position in December. The portfolio cash moved from 7% down to 4% by the end of the quarter, the majority of which went into equities.

There were four new stocks introduced to the portfolio in the quarter. Zoetis is the global leader in animal health and has delivered 7% compounded average annual operational growth in each of the five years since it was spun off from Pfizer. Population growth and urbanisation of emerging markets is leading to increased demand globally for animal protein. Zoetis also has a significant pet care business (40% of revenues), which is a growth market as burgeoning middle classes increase spend on pet care.

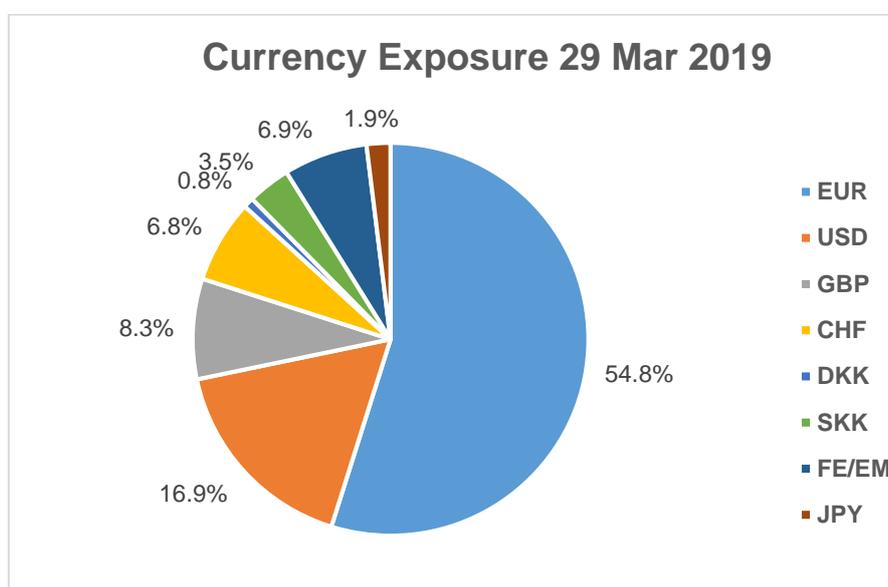

In technology, Adobe is a leading supplier of professional software for the creation of digital content for professional users. As with other software companies we own, the business generates high returns on capital and strong cashflows. The company have successfully migrated customers onto a cloud based subscription model from a license model, which smooths earnings and cashflow. Palo Alto is similar in this context and is a leading supplier and pure play on internet security, which we see as an important theme going forwards. Both companies have strong balance sheets with net cash.

Finally, Schroders is one of the best quality, longest established international asset management houses who have just entered into a wealth management JV partnership with Lloyds, which we see as positive. Their share price was 35% off its 2017 peak and comes with a near 5% dividend yield.

JP Morgan Global Macro Opportunities is a new addition in the alternatives section and is a multi-asset global macro hedge fund focusing on equity, fixed interest and foreign exchange markets. The fund targets 6-10% annualised volatility and cash plus 6% gross returns over the medium term.

There were two outright sales over the quarter, which were the final tranche of both Henkel and UBS. Henkel appear to have been underinvesting in their brands in the last few years, which is now catching up with them, combined with increased pricing pressure in their beauty and laundry division. UBS was sold after downbeat comments from the CEO regarding both the Investment Bank and Wealth numbers. We reduced the holdings in Siemens, United Health, BNP Paribas to add to other positions and we trimmed Pernod, Givaudan and Nestle following recent outperformance.

At a sector level, technology saw the biggest increase with two new names and financials saw the largest net reduction. Consumer services nudged higher also. We have adjusted the sector categorisations on the charts to account for changes to the Global Industry Classification Standard (GICS) of certain US companies. The evolution is a result of the integration between telecoms, media and internet companies. Alphabet (formerly technology sector) and Walt Disney (formerly consumer discretionary) are now categorised in Communication Services and Amazon is now showing in the Consumer Discretionary sector.

## Outlook

Our most recent tactical shift was to recommend adding more risk to portfolios at the end of 2018 in the face of what we believed to be an over-reaction to fears of slowing growth and tighter liquidity conditions. In retrospect we could have been more aggressive, but the longevity of this cycle suggests that we are much closer to the end than to the beginning. We have been edging closer to the door in readiness to leave the party for the last couple of years, but conditions have never suggested that we leave the festivities for good. Even so, it is a well-documented behavioural trait that investors experience the pain of loss far more intensely than the joy of gain, and so we will continue to strive to minimise the losses when the end of the cycle does eventually arrive. Economic cycles have not been abolished and bear markets are an inevitable component of the investment cycle, and it is important that all investors understand their tolerance to such events within the context of a long-term investment plan.

One way to avoid permanent loss of capital is to invest in companies that are less likely to go bankrupt or to come begging for cash in a downturn. While we cannot guarantee perfect foresight, our robust research process seeks to mitigate risks while providing material reward. That might sound like a truism, but is not so easy to enact and often involves blocking out siren voices enticing us onto the rocks. This attention to detail is embedded in our analysis of bonds, equities, alternative assets and in our fund selection process. It reflects the trust that has been placed in us to manage clients' wealth during these difficult times, a responsibility that we do not take lightly.

## Medium Risk Balanced

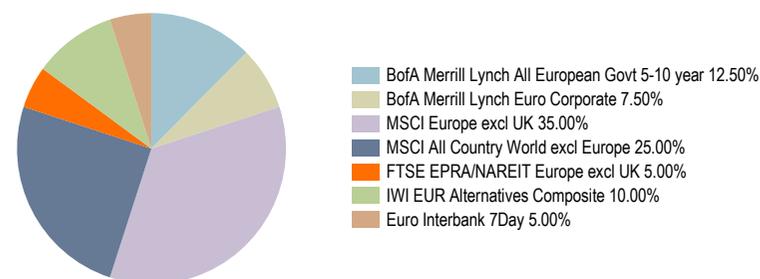

Once a year, we review the charity's circumstances to make sure that the mandate for the investment portfolio remains suitable. We will take a closer look at aspects that are relevant to the way the charity is administered, like the wider balance sheet, distribution of income and capital, changes to the Investment Policy, ethical restrictions, knowledge and experience, and investment time horizon. This helps us maintain a good understanding of the trustees' attitude to risk and capacity for loss. Some changes may impact the way we manage the portfolio so, if that is the case, we suggest contacting your investment manager to talk through the options.

We are comfortable maintaining the medium to long term investment time horizon of 5-10 years. We have assessed where this portfolio sits within the overall asset base and have applied a medium risk profile. We also believe that the balanced investment objective suits the charity's circumstances, based on our knowledge of its cashflow requirements and the investment goals that were set.

### Asset Class Performance

Changes in Asset Allocation  
31 Dec 2018 to 29th March 2019

Whereas 2018 was a very difficult year for investors, with nearly all investable asset classes delivering negative returns, the experience during the first quarter of 2019 has been equally the opposite – almost everything has gone up. There are two key reasons for this extraordinary *volte face*. First, investors had simply become too negative about the prospects for economic growth. Second, central banks, notably in the US and Europe, have rowed back on promises to continue tightening monetary policy. Indeed the Federal Reserve has gone from expecting to deliver two more quarter-point interest rate rises in 2019 to saying that it will now do nothing. Futures traders have gone a step further and are pricing in an interest rate cut this year. The more worrying inference from this is that economic growth will turn out to be weaker than forecast. It is already decelerating across the world from post-financial crisis peak levels. This concern has been reflected in falling government bond yields. The key US 10-year yield has fallen from 2.8% to 2.4% this year (and it was as high as 3.25% last November). The UK 10-year Gilt yield has dipped below 1%, and Germany's 10-year Bund has a negative yield again. Equities have had the odd wobble, but still remain close to recent highs, suggesting something of a difference of opinion between bond and equity investors. A resolution of these implied views could yet create a period of greater volatility. Much might hinge on the outcome of ongoing trade talks between the US and China, which are currently expected to conclude towards the end of April. Our central view is that neither side has the appetite for escalating a trade war, but uncertainty will persist until presidential signatures are on paper.

- Global GDP growth forecasts have been steadily downgraded but are settling around 3.25% for 2019. Although disappointing relative to the most recent experience, that rate of growth is in line with the post-financial crisis trend.
- Global corporate earnings growth forecasts have also been downgraded from 10% last October to around 5% now. But they will still grow.
- European Parliamentary elections loom in May, with the risk that extreme parties could take control of more seats and attempt to return sovereignty to national parliaments. This could affect sentiment in the interim, especially while economic activity remains sluggish.
- Brexit negotiations continue, both within Parliament and with the EU. There are a number of possible outcomes still, ranging from a chaotic “No Deal” to no Brexit at all. April 12<sup>th</sup> is the next key deadline.
- UK equities continue to be spurned by global investors, owing to the political risks, making them potentially relatively attractive once some clarity is provided.
- Global equities de-rated sharply during 2018, offering much better value. We continue to believe that neither a US nor global recession will develop imminently, and remain committed to long-term equity exposure. However, continuing political risks and the fact that the end of the US economic cycle cannot be postponed indefinitely deter us from adding further risk to portfolios now.

## Notes on Income Calculation

Estimated income and yield quoted reflect dividend income and interest receivable as paid. This income may be subject to additional tax, depending on the tax status of the account. The income quoted is calculated partly on historic payments and partly on future expected payments and as such is only a guide.

**Valuation**

This Valuation has been prepared on the basis of mid-market prices from the appropriate Stock Exchange or from the relevant fund manager. Where fund managers publish a single price, i.e. for OEICs, the valuation has been prepared on the basis of the published price. Please be aware that there are some securities which may be shown in your portfolio at an indicative price. These securities will tend to be very illiquid securities for which there is either no market or the market is very limited. This means that the valuations are a best estimate of the value of that security. This valuation may contain holdings at a nil price. These will typically be unquoted securities for which we are unable to obtain a price.

Accrued interest is excluded from the book cost for fixed interest holdings that were purchased on or after 1st October 2012. Existing holdings at that date have not had the accrued interest removed from their book costs.

UK (Govt of) Index Linked Gilts issued after July 2005 are priced using international methodology. As a result of this, the Price shown on your valuation for an Indexed Linked holding may not correspond to the Current Value.

Estimated income and yield quoted reflect dividend income and interest receivable as paid. This income may be subject to additional tax, depending on the tax status of the account. The income quoted is calculated partly on historic payments and partly on future expected payments and as such is only a guide.

The Benchmark quoted could contain indices which have been estimated as they may not have been available at the time of the valuation. The method of calculation for these indices is available on request.

**Charges**

Commission on transactions has been notified to you on contract notes sent to you at the time of dealing. These details will be shown within the Capital Cash Statement for those clients who do not receive contract notes. For trades dealt through third party brokers for execution of non UK equities, the trade price reported is the net price after the adjustment for third party execution charges. FX trades will include FX commission and/or transaction commission. Details of these charges are available on request.

**Non Nominee Holdings**

The valuation of holdings shown on this statement which are not registered in one of our Nominees, or held by one of our custodians, is based on our record of the number of shares held. It is your responsibility to ensure that our records for these securities are up to date and accurate.

**Nominee Statement**

We confirm that as at the date of this report the securities shown on the Nominee Statement were held on your behalf by us and registered in the Nominee Company or held in the depot shown. Overseas investments were held to our order by overseas agents. MiFID II eligibility indicates investments which are covered under the rules and requirements of the Markets in Financial Instruments Directive II. MiFID II is the EU legislation that regulates firms who provide services to clients linked to 'financial instruments' such as shares, bonds and units in collective investment schemes.

Holdings shown on this report are by reference to the date of trade. Purchases and transfers into the Nominee records that have not fully settled will not be included within the Nominee statement. Sales and transfers out of the Nominee records that have not fully settled will show within the Nominee statement.

**Pledged Portfolios**

If your portfolio has been pledged, it indicates that the securities are being used as collateral.

**Client money and assets**

Your assets held within our custody are held as client assets in accordance with the Financial Conduct Authority (the 'FCA') Client Asset Rules under CASS 6. Your money is held as Client Money in accordance with the FCA Client Asset Rules under CASS 7. For more detail around how your assets and money are held, please refer to our terms and conditions. The FCA Client Asset rules can be found at the following location: <http://www.fshandbook.info/FS/html/FCA/CASS>

**Notice**

Investec Wealth & Investment Limited is a member of the London Stock Exchange. Authorised and Regulated by the Financial Conduct Authority.

Registered in England No. 2122340

If you do not agree with our records or require more information please contact your Investment Manager.

---

Dear Alicia,

## **The FIA Foundation**

Please find attached your Quarterly Report & Valuation as at 31<sup>st</sup> March.

After the rough ride towards the end of last year, two key developments have combined to boost investment markets during the opening months of 2019.

First, and much as we predicted in January, economists' forecasts of multiple US interest rate rises throughout 2019 are proving to be way off the mark, so much so that the latest guidance from the Federal Reserve indicated a possible cut in rates before the end of the year. This has a significant bearing on equity valuations as a risk free return heading north of 3% in US Dollars would have been a challenge.

Second, there has been a strong hint of compromise in the ongoing US/China trade negotiations, which we hope will result in a joint statement from Presidents Trump and Xi by the end of April. Against this backdrop, global equities rallied by almost 10% in the first quarter and global bonds by about 4%.

## **Recent Performance**

Your portfolio performed well, producing a total return net of costs of 10.7% for the quarter. While this is an attractive absolute return, it could have been a little higher if we had more exposure to US technology companies. While this positioning worked well at the end of last year, it has held back returns this quarter.

Bonds have also performed reasonably well and the return of risk appetite meant corporate bonds generally outperformed government issues. Property returns were robust, led by our listed overseas real estate holdings and alternatives held onto last year's gains.

## **Looking Ahead**

The impact of the trade war has begun to bite, as evidenced by a sharp slowdown in European manufacturing data to recessionary levels. Last week's new factory orders from Germany were very poor (a collapse year on year of 8.4%, the worst number since 2009), while the slowing trend is also developing across the US, Asia and China. Perhaps counterintuitively, the only major economy in the world currently bucking the trend is the UK, a bizarre by-product of Brexit as British companies have rushed to stockpile raw materials in case of a possible 'no deal' exit.

The synchronised global slowdown is not exactly welcome, but it has at least taken pressure off key interest rates, which is good news for equity valuations. Inflation remains stubbornly below central bank targets in all the major economies, including the United States, hence we see little prospect of rates moving significantly higher for as long as anyone can reasonably predict.

Your equity exposure remains focused on a relatively short list of companies whose collective profile combines our highest conviction, long term thematic growth trends, with strong free cash flow generation supporting sustainable yields, far in excess of government bond returns.

As we have highlighted previously, a return to the 'Goldilocks' scenario for the global economy

(not too hot, not too cold) should be positive for investment markets. Together with the lower interest rate forecasts, we feel our current exposure to risk assets is justified. However, we would prefer to have stronger conviction that 'too cold' does not prevail and would like to see a setback in some of the more stretched US valuations before adding further to equities.

### **Reporting Update**

There is an important reporting development in this valuation, namely a revamped 'Charges and Remuneration' page, which has more detail about the costs associated with managing your portfolio, including the impact of any externally managed, third party funds.

There is a comprehensive summary and explanation of the changes to this important page enclosed separately with this letter. We are likely to review and upgrade this page in due course but in the meantime, please do get in touch if you have any questions.

Yours sincerely,

**Richard Maitland**

Quarter to 31 March 2019	10.7%	11.8%
Calendar Year 2018	-1.9%	-2.2%
Calendar Year 2017	5.7%	5.5%
Calendar Year 2016	3.8%	9.9%
Calendar Year 2015	6.6%	5.3%
Calendar Year 2014	11.8%	13.4%
Calendar Year 2013	16.1%	14.6%

Portfolio benchmark (from 1-Jan-16): EPRA/NAREIT Total Return (GBP) (Global) (7.5%), European CPI (Eurozone) (5%), FTSE All-World (Total Return) (70%), FTSE World govt. bonds all mats (17.5%).

Performance is calculated 'net' of Sarasin's investment management fees and custody costs that have been directly debited from your portfolio, using Bid prices. This takes into account receipts to and withdrawals from the portfolio during the period, and their dates. Prices are sourced from Bloomberg.

The report 'looks-through' to the underlying investments within the Sarasin funds in order to show the portfolio's overall allocation.

**Where a portfolio holds Sarasin Unit Trusts or OEIC Funds, we use a close of business unit price to enable more accurate performance comparison with the portfolio benchmark.**

## FIA Foundation

This is a portfolio of long-term assets.

The overall fund is invested so that an annual "income" of the order of €13 million euros per annum can be withdrawn whilst maintaining the capital value in real terms over the long term. By "in real terms", it is meant that the capital value of the fund needs to increase broadly in line with the Consumer Price Index (CPI) for Europe.

Sarasin & Partners will be asked to contribute one third of this amount, which can come from a mixture of capital and income. In February 2018, the annual withdrawal was confirmed as being €4.32m from the Sarasin & Partners portfolio. The S&P portfolio will also need to fund a \$1.7m withdrawal in mid-2018 to your US dollar bank account, to help the FIA Foundation fund its new UN-related commitments.

The actual amount of annual withdrawal will be subject to variation on the decision of the Trustees and the percentage of assets each of three investment managers look after.

The Trustees will review the investment strategy at least every three years.

The table below sets out the strategy that Sarasin & Partners will follow, together with their benchmark and the tactical operating parameters within which they have discretion to operate:

Asset Class	Low	Strategic Asset Allocation Benchmark	High	Index
Total Fixed Income	10.0	17.5	40.0	Citigroup world Gov All Maturities
Global Equity	50.0	70.0	80.0	FTSE All-World
Property	0.0	7.5	15.0	EPRA/NAREIT Global
Alternatives Assets	0.0	5.0	15.0	European CPI (Eurozone)
Cash	0.0	0.0	20.0	
<b>Total</b>		<b>100.0</b>		

Within the "alternative" asset category, no single asset class will itself represent more than 5% of the portfolio (this excludes currency hedging and derivatives).

This section reflects the value of actual investments within the portfolio and does not look-through to the underlying holdings of any Sarasin funds

In the last Investment Outlook we noted that ultimately inflation and interest rates are the two major variables to determine when the economic cycle peaks. We have consistently believed that inflation will remain subdued and consequently central banks will find it hard to raise interest rates meaningfully. At the end of 2018, we were already starting to see a more dovish tone coming from the US Federal Reserve and since the turn of the year, this policy shift was confirmed with rates now likely to be on hold for the remainder of the year. Importantly, this has brought down investor expectations of future interest rate increases (globally) in line with our own and a relief rally in equity markets has followed.

In order to sustain this market rally, economic growth will need to be robust to allow for corporate earnings to grow at a healthy pace. The latest batch of economic data would suggest that this may prove difficult. However, the consumer remains in a relatively good position and (as shown in the chart below) with wage growth in the US, UK and Europe finally responding to tighter labour markets, we are unlikely to see a recession in the near term.

Nevertheless, given the abundance of geopolitical risks, we should expect asset price volatility to remain over the coming months.

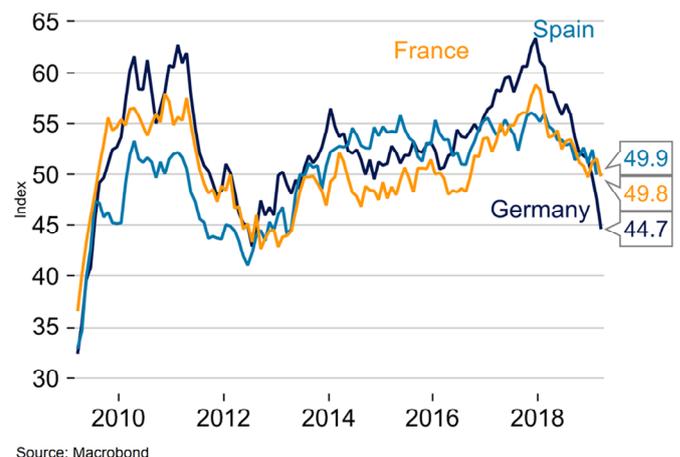

## Overview

Whilst the leading economic indicators (as measured by the Purchasing Managers Indices, PMI) are likely to be near the bottom, there is no doubt that global economic growth will be more sluggish than in previous years. We estimate that the global economy will grow by 2.7% in 2019 (in constant USD terms), down from 3.1% in 2017.

In the US, this has been exacerbated by lower than expected corporate investment as the 'sugar rush' of Donald Trump's tax cuts starts to wear off. Consequently, the recent Federal Reserve meeting was particularly dovish and exceeded the market's expectations. The majority of FOMC members now expect no interest rate increase this year (the median expectation in December 2018 was for two hikes in 2019). Just one increase is expected in 2020. Moreover, it was confirmed that the balance sheet shrinkage process (Quantitative Tightening) would conclude later this year.

China is also not immune to the economic slowdown, with growth decelerating to 6.6% in 2018. We expect that China will continue to decelerate as the economy rebalances and transitions towards a higher income country. However, unlike many western economies, there are more stimulus measures available to the Government. In order to manage the slowdown we expect more monetary loosening in the form of cuts to the Reserve Requirement Ratio (the level of capital reserves banks are required to hold) to bolster the recently announced 2 trillion yuan (£227 billion) of tax cuts.

The one area of the world where the leading economic indicators continue to deteriorate is Europe, and particularly Germany. The chart below shows the fall in manufacturing PMIs across Spain, Germany and France (a reading below 50 indicates economic contraction). The figures in Germany are the most concerning and are being driven by large falls in exports as the trade wars and issues with the auto sector continue to bite. Given the magnitude of the slowdown in Germany, it may be hard for them to avoid a technical recession. France also remains in contractionary territory for both manufacturing and services, with the 'gilet jaune' protests continuing to have an impact on economic output.

Here in the UK, despite protracted Brexit uncertainty influencing investment decisions and holding back growth in the short term, the level of employment remains remarkably robust with unemployment rate falling to 3.9%, a level last seen in 1975.

## Market performance

As noted earlier, the main change in the investment landscape has been the volte face from the US Federal Reserve on both the future path of interest rates and quantitative tightening. This surpassed market expectations and as a result, government bond yields have fallen dramatically.

In the UK this has meant that the yield on the 10 year government bond is now hovering around 1%. This has translated into a total return of 3.4% for the Gilt index and 4.9% for the corporate bond index. Across the channel in Europe yields have also fallen quite precipitously with the German 10 year Bund now yielding -0.07%. This negative yield has only ever been reached once before back in the summer of 2016.

The reduction in interest rate expectations also spilled over into broader risk assets, driving equity markets around the globe up by about 10%. Despite this being quite a sharp bounce, it is just a retracement of the losses made in December.

Whilst there has been little regional differentiation across equity markets, there has been quite a divergence in performance at sector level. Perhaps unsurprisingly the Technology sector has led the rally and is up circa 17%, in stark contrast to the underperformance of the sector during the fourth quarter of 2018. Interestingly, the Oil & Gas sector was the next best performing sector driven by a recovery in the oil price, which is up 27% since the start of the year to USD 68 per barrel (Brent).

In the currency markets, there has been a steady upward trend in the value of sterling against both the US dollar and the Euro since mid-February. How long that persists will be entirely dependent on the outcome of Brexit.

## Portfolio implications

At first glance, there are plenty of reasons to construct portfolios that are more defensive today. The global economy is growing at a slower rate and the geopolitical risks appear to be ever present: Brexit, US/China trade wars, North Korea and the rise of populist governments to name but a few.

However, we do not see any imminent risks of a global recession and importantly there is every chance that the news flow coming from the weakest major economic area,

Europe, will begin to improve. Added to which, there has been a substantial shift by the US Federal Reserve, with the prospects of further interest rate rises now a distant memory.

On balance, this leaves us more constructive on equities, which look to have greater fundamental support than both bonds and cash. As such, we will look to add risk to portfolios on an opportunistic basis.

It is worth reiterating that these short-term factors are less significant drivers of long-term investment returns than the secular changes in demographics, technology and natural capital pricing. These are the genesis of the five major, long-term trends that underlie many of the themes within portfolios: Automation, Climate Change, Ageing (and other demographic shifts), Digitalisation and Evolving Consumption patterns.

In all of these areas we can find opportunities for secular profits growth that buck the broader trend of slow global economic growth. They create a wide spectrum of rising demand, from expansion in travel to growing savings, escalating energy transition to multiplying healthcare treatments and from increasing electronic payments to advancing AI and robotics.

The decision to add carefully to risk assets has been taken in the knowledge that we have been successfully reducing clients' exposure to economically sensitive alternative holdings over recent months (where applicable). In their place, we continue to seek assets whose returns are less correlated to those from the more conventional elements of the portfolio.

Within our fixed income allocations, we continue to hold government bonds as insurance against any negative shocks. Although, with the UK 10 year gilt only yielding 1%, the potential to make much more money from government bonds is limited.

The final factor that will undoubtedly have an influence on portfolios is the outcome of Brexit. At the time of writing there is still no clear outcome emerging. Whichever solution is found, the impact on the UK economy and associated financial assets will be meaningful. This is both an opportunity but also a risk that we are (and will continue to be) monitoring closely.

# Summary of Costs and Charges

Period: 01-Jan-18 to 31-Dec-18

## Charges Summary

	Amount (€)	% of Average Portfolio Value
Sarasin costs and charges <sup>1</sup>	417,600.68	0.39
VAT on Sarasin services <sup>2</sup>	69,069.06	0.06
3rd party costs <sup>3</sup>	67,670.03	0.06
Transaction costs <sup>4</sup>	172,565.21	0.16
<b>Total</b>	<b>726,904.98</b>	<b>0.68</b>

## Itemised breakdown of costs and charges

### One-off Costs

<b>Total</b>	<b>0.00</b>	<b>0.00</b>
--------------	-------------	-------------

### Ongoing Charges

Sarasin fees for discretionary services (excluding investment in Sarasin funds) <sup>1</sup>	345,345.26	0.32
VAT charged on Sarasin discretionary fee <sup>2</sup>	69,069.06	0.06
Sarasin funds charges <sup>1</sup>	72,255.42	0.07
3rd party funds charges <sup>3</sup>	59,232.26	0.06
<b>Total</b>	<b>545,902.00</b>	<b>0.51</b>

### Transaction Costs

Transaction costs within Sarasin funds <sup>4</sup>	30,649.40	0.03
Transaction costs within portfolio <sup>4</sup>	135,841.07	0.13
Transaction costs within 3rd party funds <sup>4</sup>	5,533.93	0.01
ADR Fees <sup>4</sup>	540.81	<0.01
<b>Total</b>	<b>172,565.21</b>	<b>0.16</b>

### Incidental Costs

3rd party performance fees <sup>3</sup>	8,437.77	0.01
<b>Total</b>	<b>8,437.77</b>	<b>0.01</b>

## Cumulative effect of costs and charges on return

	Return (%)
Return before the deduction of costs and charges (Gross)	-1.2
Return after the deduction of costs and charges (Net)	-1.9
<b>Percentage Change (%)</b>	<b>-0.7</b>

The footnote numbers in the itemised breakdown indicate the sub-total in the charges summary where each charge/cost type is included.

## MANAGER'S POLICIES, PROCEDURES AND CONTROL PROCESSES

*Reporting Period to Which Disclosure Relates: Effective 01 January 2019*

This document contains the execution policy of the Sarasin UK Group of companies which are Sarasin & Partners LLP., Sarasin Asset Management Limited and Sarasin Investment Funds Limited and Sarasin Funds Management (Ireland) Limited (in their capacity as fund management companies of a number of authorised funds), together "Sarasin". Sarasin Investment Funds Limited and Sarasin Funds Management (Ireland) Limited have appointed Sarasin & Partners LLP (S&P) as investment manager to the funds. As your investment manager we will be exercising full discretion in the way in which we transact trades on your portfolio subject to and in accordance with your investment objectives, and in the case of the funds, the investment objectives and policies of the funds.

The Sarasin execution policy sets out the measures under which Sarasin meets its responsibilities to ensure the best possible result is obtained for clients when executing orders. The policy is derived from the Financial Conduct Authority's (FCA) rules on best execution (contained in Chapter 11.2A of the FCA's Conduct of Business Sourcebook "COBS") which implements the EU Markets in Financial Instruments Directive ("MiFID"). COBS 11.2A.2R of the Financial Conduct Authority (FCA) Handbook of Rules and Guidance (the "FCA Rules") requires that a firm ensures that all sufficient steps are taken to ensure the best possible result is obtained for clients when executing orders. COBS 11.2A.20 requires that Sarasin implements effective arrangements to ensure compliance with the requirement to take sufficient steps to obtain best execution.

The execution policy applies to any financial instruments which are covered by MiFID including; transferable securities, money market instruments, and units in collective investment undertaking, financial derivatives and contract for differences. The policy and oversight of best execution is owned by the Best Execution Committee who are responsible for the annual review along with ensuring the policy is fit for purpose in meeting our obligation to clients.

### 1.0 Introduction

Sarasin provides portfolio management services investing in various asset classes including equities, bonds, FX and derivatives on behalf of our clients. In carrying out these activities, we act in accordance with the best interest of our clients. Dependent on asset class we will either be placing orders with a broker for execution, or will be executing orders against an execution venue, market maker or other liquidity provider. In the latter case we will not receive a duty of best execution from the venue but will take all sufficient steps to obtain the best result for you.

### 1.1 Execution Criteria:

When executing orders take into account a variety of execution criteria to determine the relative importance of the execution factors. These include the characteristics of the client, the characteristics of the client order, the characteristics of the financial instruments in which we are dealing, and the characteristics of the execution venue for that type of order.

### 1.2 Execution Factors:

We believe that price and cost are the most important factors; therefore the best possible result is typically determined in terms of total consideration. Other factors such as speed, likelihood of execution, market impact and size are also taken into account. These may be given precedence over the immediate price and cost, but only if they help to deliver the best possible results in terms of the total overall price and cost to the client. We have listed these factors below, together with examples of when they may be a key factor in getting the best result:

- Price – for the majority of transactions this is the key factor, subject to available liquidity.
- Cost – we will take into account the explicit costs for example, commission, stamp duty and fees along with the implicit cost such as market impact.
- Size – where orders are larger than normal market size we may not be able to deal at the price we would if the order were smaller. In this case the completion of the order whilst minimizing market impact may take precedence

- Speed – there may be instances where speed becomes an important factor such as meeting a deadline such as a redemption of shares or units in a fund, or a portfolio liquidation.
- Likelihood of execution – may become important in illiquid/large orders, where the trading venue is not obvious and there is a need to execute on a timely basis.
- Nature of the Order / Instrument – the characteristics of a particular instrument may determine the available venues. As an example in OTC derivatives, we are obligated to trade with those counterparties with whom we have appropriate ISDA documentation.
- Credit Risk and Exposure – for OTC transactions we may be limited to the number of venues we transact with due to credit limits and exposure thresholds.

If you provide us with a specific client instruction in relation to an order in whole or in part, including selection of a particular broker or venue, we will execute the order on the basis of those instructions. As a result of following those instructions may prevent us from being able to provide best execution as outlined within this policy. For this purpose, if you give us specific instructions in respect of one part or aspect of an order this will not release us from our best execution obligations in respect of any other parts or aspects of the order that are not covered by such instructions.

### 1.3 Execution Venues:

In meeting our regulatory obligation to take all sufficient steps to obtain the best possible results, we may use one of the following Execution Venues:

- Regulated broking firms, which may transact clients' orders on or off regulated markets
- Algorithmic trading
- Direct Market Access products
- Multilateral Trading Facilities
- Organised Trading Facilities
- Systematic Internaliser

The execution venues used will be determined with the goal of implementing the best strategy to get the best possible result taking into account the characteristics of the financial instrument being traded.

### 1.4 Centralised Dealing Desk:

We operate a centralised dealing desk that is responsible for implementing the investment decisions made for our clients, with the exception of certain funds and mandates, where orders are executed directly by the fund manager. The same level of controls is placed on fund managers who execute orders directly, to ensure, they achieve the best possible results. The dealing desk is located in close proximity to the asset management team to ensure a high level of collaboration and communication.

### 1.5 Approved Brokers:

Sarasin can only trade with counterparties who are on the approved list of brokers and every broker must undergo a thorough assessment to ascertain whether they meet the criteria for approval, using both quantitative and qualitative data. We ensure that all counterparties have execution arrangements in place that will allow us to comply with our obligation to take sufficient steps to provide the best possible result for our clients when executing orders. We also ensure that all counterparties treat us as a Professional Client. Commissions paid to counterparties are subject to regular review by the dealing desk.

## 1.6 Allocations and Aggregation of Orders:

All client orders are pre allocated on our order management system before they are sent to the dealing desk for execution. Where trades are partially filled, fills are allocated on a pro rata basis by the order management system. If an order is being traded and a subsequent order arrives, then the dealing desk will allocate the fills to the existing order and aggregate the new order with remaining balance from the existing order.

## 2.0 Order Execution

### 2.1 Equities

In meeting our best execution for equity transactions, the venue and type of execution strategy is of importance. When executing equity trades, we use approved brokers only. We also use a variety of avenues when executing orders; from placing the order with a broker, algorithmic trading, program trading and Direct Capital Access (DCA). Each order is assessed on its own merit to assess the optimal trading avenue.

If the order is a small percentage of ADV, then we will either trade via a DCA or algorithm, depending on the region. DCA requires an order to be routed to a broker and completed immediately inside the bid offer spread, up to a pre agreed ADV and nominal value. If DCA is not available then we may use algorithms from third party providers. Execution quality is monitored and reviewed on a monthly basis by the Best Execution Committee. In addition there are agreed parameters set by the dealing desk to mitigate the risk of error.

Where orders are a large percentage of ADV, either due to the size or the illiquid nature of the stock, then in this instance, we will either try to source natural liquidity from an MTF or explore broker activity. If this does not yield a positive outcome then the dealer may place the order with either a broker that has recently been trading the stock or decide to use an algorithm. In both scenarios the dealer will control the parameters.

Program trades are used when a large group of trades are bulked together generally in the case of redemption, inflow and a change in asset allocation. Program trades allow a large number of orders to be executed in a low cost efficient manner. All Program Trades are conducted on an agency basis with an agreed commission rate. The orders are traded via specific instruction from the dealer.

Where permitted by the client, we may participate in IPOs and primary placings. Orders are placed on the order management system and run through pre trade compliance. If we do not get our full allocation then we will pro rata using the order management system.

There may be instances where we cross your order with another client via the market. This will be done at the prevailing mid-price.

### 2.2 Fixed Income

All fixed income transactions are traded over Bloomberg's MTF, using TSOX. For transactions in the liquid government bond market, We utilise an RFQ mechanism. This means simultaneously asking a minimum of three brokers for a quote. In selecting which counterparties to ask we will assess a number of factors such as axes, indicative prices and execution hit and miss rate. If the order is deemed large in nature, then the number of counterparties we request a quote from, might be reduced, to minimize information leakage

In less liquid bond markets, where liquidity and market impact are greater factor, we will try to source natural liquidity and will refrain from seeking multiple quotations so as to limit adverse price impact.

### 2.3 Derivatives

Derivatives are only used if specifically sanctioned in a client's Investment Management Agreement. When and where appropriate they are used for efficient portfolio management and to express a variety of investment views.

Exchange traded derivatives are centrally cleared and provide considerable flexibility when seeking price transparency and liquidity. Depending on the size of the order, we may choose to execute via an RFQ where we would ask a minimum of 3 counterparties. If the order is below block size, then we may give the order to a broker to work in the market.

When trading OTC, we must have industry standard legal documentation before we can trade (an ISDA). Therefore when trading instruments OTC we are limited to a small number of counterparties.

## 2.4 Unit Trusts

Where we transact on your behalf in collective investment schemes, we will execute these trades via the Authorised Corporate Director. We set internal deadlines for receipt of Unit Trust orders (never longer than an hour before the fund's valuation point) to ensure that there is sufficient time to process the trade on the intended trade date. We also perform various post trade checks, to ensure there is time for resolution of queries in case this in turn could cause a delay to the trade.

## 2.5 Cash Deposits

We use interbank brokers to assess the best rates for client money. Counterparties must firstly go through a counterparty approval process before money can be deposited. There is internal exposure limits placed on such counterparties on both an individual and aggregated basis which are reviewed on a daily and monthly basis by the risk department.

## 2.6 FX

We trade foreign exchange spot transactions in settlement of securities in non-base currencies and also when instructed by portfolio managers, these are dealt and settled through clients' custodial banks. Forward foreign exchange transactions conducted as currency hedges are made with approved, regulated banks. These include, but are not limited to clients' custodial banks. Except where clients have appointed our majority shareholder, Bank J. Safra Sarasin as custodian, associate companies are not normally used.

## 3.0 Monitoring Best Execution

To measure best execution we use independent Transaction Cost Analysis (TCA) reports and data, along with in-house data to measure best execution and adherence with the policy.

### First line

Equities: For Equity orders we operate an exception based approach. Trades that fall outside of tolerance are flagged on a T+1 basis. These tolerance levels have been agreed by the Best Execution Committee. For any exception, the Dealing Desk will provide a rationale for the underperformance, which is evaluated on a quarterly basis, by the Best Execution Committee.

Bonds and Listed Derivatives: For derivatives and bonds, we use internal data to ensure competing quotes have been obtained where relevant and that any trades whereby 3 brokers were not selected is flagged and discussed on a monthly basis at the best execution meeting.

OTC products (Swaps/CFDs): To ensure best execution we request for a quote from four different counterparties and select the cheapest financing rate. Details of these quotes are stored and reviewed monthly by compliance. Orders and quotes are communicated with brokers by email and therefore an audit trail is maintained.

### Second Line

The second line Compliance and risk monitoring teams also performs independent monitoring according to a risk-based monitoring plan or on an ad hoc basis when necessary, to verify the adequacy and effectiveness of the measures and procedures put in place to ensure that we comply with our obligations under this policy.

## 4.0 Reporting To Clients

To comply with our reporting obligations, we will publish data on our website disclosing our top five execution venues, in terms of trading volume, per asset class. Where relevant we will publish the top five entities (brokers) where we have placed orders on behalf of clients for execution.

## 5.0 Glossary

**Algorithm Trading:** Algorithmic trading relies on computer systems to buy shares automatically when predefined market conditions are met.

**ADV, Average Daily Volume:** is the amount a security has traded on average over a specific period of time.

**IPO:** Initial Public Offering

**ISDA:** An ISDA Master Agreement is the standard document that is commonly used to govern over-the-counter derivatives transactions. The Agreement, which is published by the International Swaps and Derivatives Association (ISDA), outlines the standard terms to be applied to a derivatives transaction between two parties.

**MTF:** A multilateral system, operated by an investment firm or a market operator, which brings together multiple third-party buying and selling interests in financial instruments – in the system and in accordance with non-discretionary rules – in a way that results in a contract in accordance with the provisions of Title II of MiFID.

**OTC:** Over the Counter

**(OTF: Organised Trading Facility:** A multilateral system that is not a Regulated market or MTF. Within an OTF, multiple third-party buying and selling interests in bonds, structured finance products, emission allowances or derivatives are able to interact in a way that results in a contract. Equities are not permitted to be traded through an OTF.

**Program Trading:** A basket of securities traded together, which are all executed vs a defined benchmark.

**Regulated Market:** A multilateral system, operated and/or managed by a market operator, which brings together or facilitates the bringing together of multiple third-party buying and selling interests in financial instruments in the system and in accordance with its non-discretionary rules in a way that results in a contract, in respect of the financial instruments admitted to trading under its rules and/or systems, and which is authorized and functions regularly and in accordance with the provisions of Title II of MiFID.

**Request For Quote:** A trading protocol available in certain asset classes where a number of counterparties are asked simultaneously for a price.

**Systematic Internaliser:** An investment firm which, on an organised, frequent and systematic basis, deals on its own account by executing client orders outside a Regulated Market or MTF.

**TSOX:** Bloomberg's Execution Management System for fixed income.

## IMPORTANT NOTICE

**This notice is being given in accordance with Regulation 10 of the U.K. International Tax Compliance Regulations 2015 (the Regulations)**

### Notification to Account Holders of International Disclosure Requirements

The U.K. government has issued regulations giving effect to various international agreements allowing it to exchange account information provided by U.K. financial institutions to other jurisdictions. The new regulations grant HM Revenue and Customs (**HMRC**) these powers and Sarasin & Partners LLP (**Sarasin**) must disclose information about its clients' accounts. Under these Regulations Sarasin is required to make you aware that if for the purposes of the Regulations, you are classified as a 'Reportable Person' and as owning a 'Reportable Account' certain financial information about you as specified in E.U. directives and U.S. global tax legislation will be reported by Sarasin to HMRC on an on-going basis. The information HMRC collects may be transferred to any competent authority or governments of other jurisdictions in accordance with relevant reciprocal exchange of information intergovernmental agreements.

## Description

---

### General

#### Acronyms

AGR - Annualised Growth Rate  
 bp - Basis Point (100th of a Percent)  
 ISA - Individual Savings Account  
 FRN - Floating Rate Note  
 MSCI - Morgan Stanley Capital International Inc  
 LIBOR - London Inter Bank Offered Rate  
 P/L - Profit/Loss  
 RPI - Retail Price Index (UK)  
 S & P - Standard and Poor's  
 YTD - Year to Date

#### Bloomberg

A source of investment and statistical data, supplied to us electronically.

#### Look-through Reporting

Where appropriate, we "look-through" the investments that you have in Sarasin funds and consolidate these holdings with the portfolio's direct holdings. The result is shown in the Consolidated Valuation, within the Valuation and Accounting Statements section, and all of the analysis throughout the report uses this consolidated position, unless stated.

### Summary

The summary shows the portfolio's key statistics. The asset allocation breaks the portfolio down by value into the major asset classes. This is followed by the estimated annual income from each category together with the yield. This is the income that the current portfolio would have produced over the last twelve months and it does not take into account any future changes to the asset allocation or the level of dividends or interest rates. The pie charts shows the portfolio's allocation to each of the major currencies or geographical regions. The performance is summarised at the bottom, using selected time periods, and this is followed by the portfolio's benchmark return. Where a long-term target return has been agreed and the time horizon completed we will show for the latest rolling period the returns of both the portfolio and the target return.

### Investment Mandate

Shows your investment objectives and latest instructions to us, together with any restrictions.

### Performance

#### Reconciliation

The table provides the information required to calculate the fund's overall performance together with the major constituent parts. The first column shows the value brought forward from your previous report. The Net Investment is the net of the purchases and sales and any stock or cash transferred into or withdrawn from the portfolio during the period. The market effect is the rise or fall in the value of the investments. The capital return is a time-weighted calculation, which takes into account when the purchases, sales or transfers were made. The income return is the effect of your holdings going ex-dividend or coupon payments and this is shown in percentage terms. This is added to the capital return to give the portfolio's total return. The table at the bottom of the page shows the portfolio's performance and compares it to the relevant index return for selected time periods. The portfolio's benchmark is shown at the bottom.

#### Charts

The charts show the percentage return from each of the portfolio's major asset classes and compares them to the relevant index.

## Equity Performance (Geographical)

**Geographic Region** Shows your absolute performance by major geographic region, together with the equity benchmark return, for selected periods.

## Equity Performance (Industrial)

**Industry** Shows your absolute performance by major industry, together with the equity benchmark return, for selected periods.

## Global Equity Performance

Shows your equities that made the largest positive and negative absolute contributions to the performance of the fund, shown as a percentage.

## Geographic Analysis - Equities

Compares the Geographic Allocation of your portfolio's equities against a world index. The difference demonstrates by how much your portfolio's exposure to each geographic area varies from that of the index.

## Industrial Analysis - Equities

Compares the Geographic Allocation of your portfolio's equities against a world index. The difference demonstrates by how much your portfolio's exposure to each geographic area varies from that of the index.

## Bonds

This section reports various weighted average financial indicators and categorisations of all bonds that are held in your portfolio. Inflation-linked bonds are not included in the quantitative calculations, however they are included in the credit quality. External fund holdings, where held, are excluded from the calculations. We use the Bloomberg Composite credit rating for all bonds, where available, which is an average of the 3 main credit rating agencies, S&P, Fitch and Moody's.

**Coupon** The interest rate at issue (or current interest rate of floating rate notes FRN's) of all bond holdings.

**Yield to Maturity** The yield of a bond calculated to maturity, based on the Bid price.

**Maturity (years)** The number of years till the bond redeems (or is expected to redeem).

**Adjusted Duration** The Adjusted Duration is a measure of bond price sensitivity to changes in yield based on the bid price.

**Spread to Government** The difference between the yield of the bond and its benchmark government security, using market convention.

**Rating** The weighted average credit rating of all bond holdings.

## Index Returns

The top section shows the total return performance over recent reporting periods of any Sarasin funds held in your portfolio on the valuation date. The data shown is for the Accumulation units of the fund share class owned in your portfolio. This is followed by the comparable performance for the major asset classes over the same periods in the base currency of your portfolio.

**Volatility** For both the Sarasin funds and the indices we show the standard deviation of the monthly returns over a rolling 3-year period.

## Group Valuation

Shows the valuation by holding of all of the portfolios within the Group of portfolios.

## Schedule of Transactions

Movements within the portfolio for the period including: Purchases, Sales, Capital Events and Transfers IN and OUT. The Realised Profit or Loss is the difference between the book cost of the securities sold and the proceeds.

**Capital Events** Lists the holdings that underwent a change of capital structure during the period.

**Transaction Summary** Summarises the number and overall value of all of the transactions and cash movements, including capital events, within each portfolio.

## Cash Reconciliation

This section reconciles the movements through the portfolio's cash account(s) for the reporting period. A summary Statement is followed by detailed listings of transactions for Investment Income, Interest, and Tax Reclaims, Capital Movements and any miscellaneous items deducted from this are any Monies paid away including management fees and custodian charges, where applicable. This is followed by the total of all Purchases (a negative sum), the total proceeds of any Sales and Redemptions.

**Effect of exchange rate movement** The cash reconciliation shows the movement in your total cash balances exchanged into the base currency of your portfolio, our system will exchange your transactions and cash balances at the rate used at the beginning of the period and compare this with the rate used at the end of the period.

## Cash Transactions

Shows each portfolio's cash transactions, in date order, for income and capital cash.

## Summary of Costs and Charges

<b>One Off Costs</b>	<p>All costs and charges incurred at the beginning or end of this period for investment service(s) and collected by Sarasin &amp; Partners.</p> <p>There are no entry or exit charges for any of the Sarasin &amp; Partners funds.</p>
<b>Sarasin fees for discretionary services</b>	<p>All parts of your portfolio not in Sarasin funds are charged a management fee, based on the actual value of your portfolio (including cash) and payable or rebated quarterly in arrears in accordance with your fee schedule.</p>
<b>Adviser Fees</b>	<p>The charges you have agreed to pay for an external adviser's services.</p>
<b>Sarasin and Third Party fund charges</b>	<p>Fund charges are shown as Ongoing Charges Figure (OCF). They are the ongoing costs of Sarasin &amp; Partners funds and third party funds, comprising the Annual Management Charge (AMC) and Fixed Operating Charge (FOC) paid out of the fund assets. AMC is the cost of managing the fund and FOC represents the regular and recurring fund-wide expenses such as keeping a register of investors, calculating the price of the fund's units or shares and keeping the fund's assets safe. OCF is included in Key Investors Information Documents (KIID).</p>
<b>Sarasin and Third Party custody charges</b>	<p>Fees charged by custodians for providing custody services for assets in your portfolio. Sarasin global custody charges are applicable when you appoint Sarasin &amp; Partners to be your custodian. Third party custody charges are applicable when you appoint a third party custodian directly.</p>
<b>LEI Fees</b>	<p>The annual charge to an official Legal Entity Identifier (LEI) registration agent to maintain the LEI code.</p>
<b>SWIFT / CHAPS payment charges</b>	<p>Bank charges for payments via SWIFT and CHAPS.</p> <p>There is no additional cost for BACS payments.</p>
<b>Transaction Costs</b>	<p>We do not charge on transactions. This line represents all costs and charges that relate to transactions performed by Sarasin &amp; Partners or third parties and are deducted at the point of trading:</p> <ul style="list-style-type: none"> <li>- Stamp duty</li> <li>- Broker commissions</li> <li>- Local taxes</li> <li>- Dilution Levy</li> </ul> <p>ADR fees: The charge levied by custodians for administering investments in American Depository Receipts (known as ADRs)</p> <p>Derivative Transaction charge: Processing charges for Derivative transactions.</p> <p>Slippage cost: a new calculation to identify the theoretical cost of each transaction (buys and sells) using the advertised mid-price in the market (Arrival Price) with no additional charges and compare the cost to using the actual net transaction price. Sarasin &amp; Partners use the Closing Price (taken on the trading day before the decision to trade is made) as Arrival Price for 2018. Negative values signify the net transaction price is more profitable than the Arrival Price. Positive values signify the theoretical Arrival price is more profitable than the net transaction price.</p>
<b>Incidental Costs</b>	<p>Incidental costs are performance fees payable if Sarasin &amp; Partners or a third party are entitled to receive such a fee.</p>
<b>Gross Performance</b>	<p>Investment return before the deduction of costs and charges.</p>

**Net Performance**

Investment return after the deduction of costs and charges.

## Investment mandate

### Objectives

To provide a distribution of €4 million per annum on an €112 million initial investment, generated on total return basis, net of management charges and any irrecoverable tax, whilst maintaining the capital value of the Portfolio in real terms over the long term. By 'in real terms' it is meant that the capital value of the Portfolio needs to increase broadly in line with the European Central Bank's (ECB), Harmonised Index of Consumer Prices (HICP).

There will be an additional €7 million withdrawal requirement in 2019 and 2020 which will be split between your three investment managers, all with similar size investment portfolios. The value potentially withdrawn from the CCLA Portfolio shall be advised by you closer to the withdrawal date.

### Income instructions

Income will be retained in the Portfolio and withdrawals shall be instructed by FIA Foundation on an ad hoc basis.

### Benchmark and performance measurement

The Portfolio's total return will be reviewed against a benchmark of the ECB's HICP, in addition to a comparator.

The comparator used for monitoring the progress of the long-term portfolio on a quarterly basis will be the composite indices used to assess the performance of the underlying fund(s) in which you invest and will be included in our quarterly reporting.

No warranty or undertaking is given by the Manager as to the performance or profitability of the Portfolio (or any part of it) or

that the performance objective stated above will be successfully achieved. Any performance level or benchmark that we may use in relation to your Portfolio is set only as a non-binding indication of CCLA's expected performance and is not a representation or warranty that the performance level or benchmark will be achieved.

### Restrictions

You have specified that you wish the portfolio to be invested in funds which are either managed or operated by CCLA Investment Management Limited or one of its affiliates. In providing you with the Discretionary Investment Management Service we will ensure that, during the term of the Agreement, the portfolio is only invested in such funds until we are otherwise notified by you. In addition to the funds you will have cash accounts set up with a third-party banking entity to provide a forward foreign exchange (FFX) hedging service at CCLA's discretion.

The portfolio should not be invested in any funds which may have restricted liquidity, such as the COIF Charities Property Fund without prior authorisation from the Trustees' via FIA Foundation's Investment Committee. This is only at a fund level and not underlying asset exposure.

You are aware that each pooled fund has its own objectives which may differ from your own investment objectives; and that the manager's investment decisions for each pooled fund are determined by the objectives of that pooled fund.

### Ethical investment

You have asked for no tobacco as an ethical constraint. We have agreed that this will be interpreted in line with the Tobacco restriction as implemented by the COIF Charities Investment Fund.

## Portfolio commentary and market review, Q1 2019

Source: CCLA

### Fund Manager Overview

Global equity markets rose strongly in the quarter. An early bounce in prices, was given fresh momentum by a change of monetary policy by the US Federal Reserve. Economic data showed global growth continuing, but at a modest rate. Consumer activity remained steady, buoyed by low unemployment and rising real wages, but manufacturing disappointed and business investment was held back by general fears of a maturing economic cycle and specific concerns over the risk of worsening trade friction. Global inflation remained subdued and interest rates stayed at extremely low levels. A key event of the period was the decision by the US Federal Reserve to put on hold their programme of monetary policy normalisation. Projected interest rate increases were postponed, and the balance sheet reduction programme halted. This change gave a fillip to investor confidence which was soon reflected in both equity and fixed interest markets. Against this backdrop, the global equity market gave a total return of 9.62% to a sterling-based investor, a gain which took the return over the past 12 months to 10.45%. In this environment, all the major regional markets gave positive returns. The best performer was the US, with a gain of 11.24%, followed by Asia, 8.60%, Europe 8.06% and Japan, 4.47%. All the individual markets in Europe advanced, with six markets rising by 10% or more. In Asia, four markets rose by more than 10%. The UK market matched its peers, improving by 9.41%. The gain over the past year is 7.58%.

The domestic fixed interest sector also strengthened; in the early part of the period it moved in a narrow range, supported by weak economic data, but was held back by fears of higher inflation, should sterling weaken post Brexit. Prices moved

higher later, with sentiment boosted by developments in the US. In the property sector, capital values edged down, pulled lower by weakness in the retail sub-sector, which offset gains made elsewhere. The contribution from income, however, supported the overall sector total return. Sterling rallied against dollar, yen and euro, although it gave back some of the gains in the final weeks.

### The Portfolio

As at the 31<sup>st</sup> March, the portfolio was valued at €60,772,256, (£52,368,026). This compares to an initial capital value of €56,614,958 (£49,320,290) following its receipt on 23<sup>rd</sup> January 2019. This sum was subsequently invested in the COIF Charities Investment Fund (the Investment Fund) on 24<sup>th</sup> January (with a small deposit being maintained in the COIF Charities Deposit Fund), without the 50% GBP/EUR hedge in place.

The Investment Fund continues to have a bias to real assets and in particular to global equities which at the date of the report accounted for 71.31% of the total. In addition to equities we include infrastructure and operating assets 8.95%, property, 5.14%, contractual income, 3.81%, private equity & other, 2.11%, and other multi-asset investments, 2.17%, within our allocation to real assets. The remaining portfolio is comprised of cash, 3.66% and fixed interest, 2.85%. The greatest geographical equity allocation is to the US, 44.68%, followed by the UK, 23.58%, Developed Europe, 17.30%, Asia Pacific ex-Japan, 6.88%, and Japan, 2.85%. A full analysis of the asset split, together with the currency exposures is shown on page 3.

Our overall expectations for the economic backcloth to investment, of continued but moderate growth and a slow move to monetary policy normalisation, were maintained. The market weakness in the final quarter of 2018 improved our view of the relative value in offer in equity markets, but not to the point that we chose to reverse the more cautious tactical stance introduced in the third and fourth quarters of last year. At the portfolio level this meant a focus on quality growth and continued caution towards cyclical stocks and sectors.

## Performance

Over the period in which the capital has been invested, the Investment Fund has returned 6.43% in sterling terms relative to its short-term comparator, which has registered a rise of 5.90%. The Foundation's total investments over the same period have increased by 6.18% in sterling terms, a lesser amount owing to the impact of the mid-offer spread (the anti-dilution levy) on the initial purchase of units.

Taking into account the movement in the GBP/EUR rate and the effect this has had on the total portfolio value, rising from €56,614,958 at inception to €60,772,256 at the quarter end, the portfolio has returned 7.34% on a euro-denominated, net total return basis, after trading costs. This is inclusive of the quarterly distribution of 13.19 pence per unit held, which will be received by the Foundation two months from the end of this reporting period. Over the 2-month period to 31<sup>st</sup> March 2019, the Investment Funds' Comparator has returned 5.65% on a euro-denominated basis whilst the Foundations' Benchmark, the European Central Bank (ECB) Harmonised Index of Consumer Prices (HICP), has returned 1.34%\*.

The equity component of the Investment Fund was the strongest asset class over the quarter, rallying from recent

lows recorded at the end of 2018 and vindicating the reinvestment of some of the cash balances. Within this, the biggest contribution to returns came from the IT sector where SS&C, Accenture and PayPal were the best performers. There were also encouraging returns from the exposure to financials and healthcare companies, the former via data providers and exchanges and the latter from those involved in medical technology and life sciences.

The cash exposure, albeit reduced from the end of 2018, was unhelpful in an environment where most asset classes increased in value.

## Outlook

We expect growth in the world economy to continue at a moderate, but steady pace. Expansion in the US will slow as the boost from tax cuts and higher government spending declines, but an international environment of lower interest rates and a strengthening consumer, should support global activity. Inflation is expected to remain low.

At the end of 2018, investors were concerned about the potential threat to valuations from higher interest rates and the reduction in central bank balance sheets. The change of US policy has materially reduced these fears and indeed created the potential for an extended economic upswing which could continue for some time. Uncertainties remain of course and this will keep volatility near recent elevated levels, but, overall, we expect asset prices to remain well supported. We continue to favour real assets, such as global equities, and look for companies that are fairly rated and which can grow profits independently of the broad economic environment.

\* ECB HICP is published monthly and is, therefore, unavailable for the period since inception.

Source: UBS Portfolio Analysis System. Please note, some equities held may not be included in this analysis. All values are gross.

As part of our analysis of the risk profile of equity portfolios we use UBS' PAS (portfolio analytics system) to compare the aggregate characteristics of the companies in your portfolio against the corresponding data for the benchmark portfolio.

To highlight a couple of features which may benefit from an explanatory note:-

Tracking error: this measures the extent to which portfolio returns vary from those of the benchmark. A high tracking error indicates a high degree of 'active risk' - the impact on returns of the manager's decisions, as opposed to the impact of general market movement.

Beta: is a measure of the portfolio's volatility relative to that of the benchmark. A portfolio with beta greater than 1 indicates a relatively high degree of 'systematic risk', the risk acquired through exposure to a market rather than to an individual stock.

P/E (price/earnings) and EV/EBIT (enterprise value/earnings before interest and tax) are measures of how much investors will pay to access a company's earnings. P/E refers solely to equity capital whereas EV/EBIT includes loan finance.

Quality: we refer to the forecast return on equity investment, and to measures such as the debt/equity ratio, to ensure that we are getting value for money by holding companies expected to deliver attractive cash flow returns to shareholders - these being the key driver of long term share prices and hence total returns.

## Stewardship report

### Ethical & responsible investment report

Our work has four strands:

- 1 Engagement focused on social and environmental issues that are a priority for our clients.
- 2 Voting and engagement on governance issues to protect shareholder value and address excessive remuneration.
- 3 Setting constraints on investment and exposure to activities considered unacceptable by our clients.
- 4 Responsibilities under the UK Stewardship Code and the UN Principles for Responsible Investment.

### Quarterly highlights

During the quarter, we updated the CCLA climate change and investment policy. This supplemented our existing approach in several areas including introducing a maximum carbon footprint for our portfolios and testing 'fossil fuel' and other key companies' business plans against the Paris Climate Agreement. The full policy is available on our website.

We hosted the launch of the 2018 Business Benchmark on Farm Animal Welfare. This rates food companies on their approach to animal welfare issues.

We submitted our annual response to the Principles of Responsible Investment Assessment process. This is a detailed survey covering all areas of our approach to Responsible Investment. Given our commitment to responsible investment we aim to achieve an 'A' Grade in all reporting areas.

### Ethical constraints

We confirm that your funds have been managed to the agreed ethical exclusion policies this quarter.

### Focus on proxy voting

As shareholders we have the right to vote at company meetings and we aim to vote at all of our holdings.

Our voting policy seeks to promote best practice standards of corporate governance, promote our wider engagement priorities and reflect the values of our clients. For this reason,

issues such as climate change, tax transparency and gender diversity.

To strengthen our impact, we write to the Company Secretary to inform them of any concerns we might have before lodging a dissenting vote. This allows us the opportunity to drive through improvements in company practice via engagement.

To better align our voting with our engagement activity we have redeveloped our approach to climate change, corporate tax, gender diversity and inequality.

In 2019, we will vote against the re-election of the Board Chair if we consider the company to be taking insufficient steps to transition to a low carbon future.

We also vote against the re-election of the Board Chair if the company is amongst the worst rated on their approach to corporate tax transparency and the Chair of the Nomination Committee if there are not adequate levels of diversity in senior management.

We have also strengthened our rigorous approach to considering executive pay proposals. In 2019, we will not support any pay policy, tabled by a FTSE 350 constituent company, if they have not disclosed the ratio between the CEO and average worker's pay.

### Quarter one voting in detail

During the quarter, we did not support 16.6% of the resolutions proposed by the management of the companies held in the COIF Charities Investment Fund.

We continued our longstanding focus on addressing inappropriate executive remuneration. During the quarter, the COIF Charities Investment Fund did not support 89% of Remuneration Reports and Policies.

We were particularly concerned about the Remuneration Report issued by The Walt Disney Company. This awarded the Chief Executive with stock worth over \$138m and additional performance incentives with a value of over \$18m. Sadly, despite widescale dissent, the proposal was passed by 57% of shareholders.

We also voted against the re-election of the Nomination Committee Chair at Compass Group due to a lack of gender diversity on the board and the re-election of the Chair of the Audit Committee at Novartis due to concerns about the independence of the audit function.

## Costs and Charges†

23 January 2019 - 31 March 2019

	<b>Percentage</b>	<b>Amount</b>
	%	€
Total investment service costs:*	0.00	0
Total third-party payments received by CCLA:	0.00	0
Total investment product costs:**	0.40	229,937
<b>Total costs and charges incurred during the reporting period:</b>	<b>0.40</b>	<b>229,937</b>

† An itemised breakdown of the aggregated costs and charges is available on request.

\* Consists of the Annual Management Charge and, where applicable, fees for Custody.

\*\* Consists of all costs and associated charges related to the underlying financial instruments. Depending on your level of investment in certain CCLA funds, you may be eligible for a discretionary investment cost rebate paid by CCLA.

Cumulative effect of costs and charges on return of investment over the reporting period

	<b>Percentage</b>	<b>Amount</b>
	%	€
Return before the deduction of costs and charges (gross)	7.74	4,386,102
Return after the deduction of costs & charges (net)	7.34	4,156,166
<b>Cumulative effect of costs &amp; charges (difference)</b>	<b>0.40</b>	<b>229,937</b>

This table illustrates the effect of costs and charges on the return of the investment portfolio based on the average market value of your holding over the period.

## Risk warnings

All valuation and performance data in this report are calculated on a mid-price basis. A supplementary bid-price valuation is available on request.

The services described are provided by CCLA Investment Management Limited (CCLA), a firm authorised and regulated by the Financial Conduct Authority. Nothing in this document should be deemed to constitute the provision of financial, investment or other professional advice.

Past performance is not an indication of future performance. The value of investments and any income derived from them, may fall as well as rise and you may not get back the full amount invested. Exchange rate changes may have an adverse effect on the value, price or income of investments. The levels and basis of, and relief from, taxation may change. You should obtain tax advice where appropriate, before proceeding with any investment. Investments in higher yielding bonds issued by borrowers with lower credit rating may result in a greater risk of default and have a negative impact on income and capital value.

Income payments may constitute a return on capital in whole, or in part. Income may be achieved by foregoing future capital growth.

Any forward-looking statements are based upon our current opinions, expectations and projections. We undertake no obligation to update or revise these. Actual results could differ materially from those anticipated.

CCLA do not engage in securities financing transactions or any other unauthorised use of client assets. As such, no benefit from these types of transactions has been accrued. Assets within the portfolio that are included within Section C of Annex 1 of Directive 2014/65/EU are subject to the rules of said Directive and its implementing measures. Those assets that are not included within Section C are not subject to the respective rules and implementing measures.

## Performance and attribution methodology

Performance return calculations are time weighted and calculated on a daily basis. Returns for longer term periods are geometrically chain-linked together. The relative return is the difference between total fund return and total benchmark return (over or under performance of the fund relative to the benchmark). Relative attribution explains how the relative return was achieved. It is broken down into 'Allocation' and 'Selection'. Allocation is the impact of holding a different weighting in a sector/market from the benchmark. Selection is the result of outperformance within a sector/market.
