# Module 14. Collecting Performance Data Using Chart Audits and Electronic Data Extraction

## Instructor's Guide

Practice facilitator (PF) competencies addressed in this module:

- Specialized skill in conducting medical record reviews using paper audits or electronic systems

### Time

- Pre-session preparation for learners: 110 minutes
- Session: 60 minutes

### Objectives

After completing this module, learners will be able to:

1. For paper-based data: Conduct a paper chart audit using a data abstraction form.
2. For electronic data: Create a sample set of instructions for an electronic data pull for a performance audit.

### Exercises and Activities To Complete Before and During the Session

**Pre-session preparation.** Ask the learners to review information below and complete activity (110 minutes)

1. The content of this module.
2. Gregory B, Van Horn C, Kaprielian V. Eight steps to a chart audit for quality. Fam Pract Manag 2008 July-Aug;15(7):A3-A8. Available at:  
<http://www.aafp.org/fpm/2008/0700/pa3.html>

**Activity for learners** (paper-based data) (50 minutes)

1. Have learners conduct chart abstractions of diabetes Healthcare Effectiveness Data and Information Set indicators for three different time periods for the clinic WeServeEveryone. Have them use the mock patient records and data abstraction form in the Appendix.
  - The date of abstraction for the following patients is October 27, 2010:
    - Billy Gato
    - Cherie Amore
    - Wendy See
  - The date of abstraction for the following patients is January 10, 2011:
    - John Donut
    - Adam Pie
    - Tom Gelato

- The date of abstraction for the following patients is April 14, 2011:
  - Steve Apple
  - Bill Windows
  - Monica Latte

**During the session.** Presentation (10 minutes)

1. Present key concepts from the module.

**Large group discussion.** Ask questions and explore answers with learners. (15 minutes)

1. What experience have you had conducting paper chart audits or working with electronic systems to collect performance data?
2. What were three of your lessons learned for each medium?
3. What were your experiences conducting the paper chart audits for today's session? What aspect was easiest for you? What was the most challenging? What did you learn from this pre-session assignment that you would apply to your work with practices?

**Activity for learners** (25 minutes)

1. Divide into pairs or small groups.
2. Have learners work together to create instructions for the staff person managing the practice EHR or patient registry system to pull a report from the electronic system that parallels that of the paper audit the learner conducted pre-session. Have the learners use the sample Data Pull Instructions template to create the request.

**Discussion.** Ask questions and explore answers with learners. (10 minutes)

1. What did you learn from creating the instructions for IT and an electronic performance data pull?
2. How will you use this with your practices?

## Module 14.

One of the most important functions of a facilitator is to help practices obtain, present, and interpret data in a meaningful and compelling way and translate the findings into action. Data collection, however, is laborious. Facilitators can spend much of their time with a practice simply building the practice's capacity to access accurate and reliable data from its information systems and to use these data to guide improvement work.

With data being key to quality improvement (QI), it is important that you feel comfortable collecting, analyzing, and reporting data. Once data have been collected, they will need to be cleaned, analyzed, and presented to both the practice team involved with the project and to practice staff, clinicians, and leadership. The use of data and feedback systems allows practices to see improvements during an intervention, make adjustments, and stay engaged. Also consider Appreciative Inquiry as an approach to collecting valuable performance feedback (for more information, refer to [Module 9](#)).

### Considerations When Collecting Clinical Performance Data

Many practices, especially small ones, continue to use paper medical records, often even when they have implemented an electronic health record (EHR) system. Others have transferred their record keeping completely to an EHR system. Still others use a combination of paper and electronic, for example, maintaining paper charts but also running a manual electronic registry. In other instances, the practice has gone completely digital but has only entered part of its patient records into its EHR system, so to access information, including information from prior years, you will need to pull data from both their EHR system and paper records to create a full picture. Given this, as a PF, you will want to be skilled in collecting, managing and reporting data from both paper and electronic mediums and in training practice staff and clinicians to do the same.

In general, an audit of 30 to 60 patient records seen during the target time periods is sufficient to generate usable performance data for a practice. You will need to collect data multiple times so the practice can track its progress.

For the initial performance audit, it is usually most effective to conduct an audit of the previous 12 months and organize these data by quarter to show fluctuations in performance over that time, but you will want to work with the practice to determine the time period. A 12-month period is useful because fluctuations across the period can be a valuable source of information about factors that may be affecting clinical performance. During active improvement work, monthly performance audits of patients seen during that period can help a practice monitor its progress toward improvement goals and make adjustments to processes and procedures when progress has not occurred.

When a practice is engaged in a Plan Do Study Act (PDSA) cycle, daily performance audits may be needed to assess how effective the modification is in improving the targeted performance metric, and for deciding if a modification is ready to be spread wider in the practice. For a

practice that has achieved an improvement goal, quarterly audits can be used to help them ensure that the improved performance is maintained. They also can alert the practice to the need for adjustments when performance unexpectedly declines.

## **Procedures for Paper Chart Audits**

When you are collecting data from a paper-based system, you will want to create a form for abstracting information from the practice's paper records. If you are collecting data from electronic systems, such as an EHR or patient registry, you will need to prepare a performance data request with specifications about what needs to be pulled from the system. In general, you will want to prepare both abstraction forms and data requests in collaboration with the practice's QI team (if one exists) as well as with staff at the practice that prepare reports for payers and insurers and other groups. As you work with them to define the information that will be collected, you will want to ask about data they already collect and report and consider whether these data and reports could be used in addition to, or in lieu of, new data collection.

If you are abstracting from paper charts, you will enter the data into the abstraction spreadsheet. Figure 14.1 contains an example of an abstraction spreadsheet. You will most likely work with medical records staff to access the patient charts. Ideally they can provide you with a private place to sit and review the charts that is close to where the records are kept, so it is easy to return them to staff when you complete the abstraction. In practices with paper-based systems, it is very important to return charts in a timely way, as a staff person or clinician may need them for patient care or other purposes. Nothing is more disruptive to care than not being able to find a patient record when you need it.

Unlike with electronic data, where you should be able to collect data on the universe of patients in your target population, you will have to sample patients when doing audits using paper records. For performance audits, a random sampling of 30 to 60 charts or patient records for the initial performance audit can be sufficient to provide information on the practice's performance. Smaller samples are vulnerable to random variability.

Another approach can be to sample 10 percent of eligible charts or to take a convenience sample from a single day of patients who meet the inclusion criteria (such as patients with certain chronic conditions). For monthly performance monitoring, an audit of the records of 10 patients seen during that month can be sufficient for a practice to evaluate progress toward an improvement goal.

You will need a list of patient records that you want to review. These lists can be generated using billing data with diagnostic codes and information on other inclusion and exclusion criteria. You will then need to give these patient record numbers to medical records staff, who can pull the charts and provide them to you for audit.

You will need to work closely with the QI team and practice manager to ensure that you do not create an undue burden on medical records staff and that you do not pull and retain charts of patients being seen that day.

## Procedures for Electronic Health Record Audits

When requesting pulls of electronic data, you will typically create a data or report request and give this to the person in charge of producing reports from the practice's EHR or registry systems. These data can be provided in a summary format (such as a report of the percentage of patients meeting certain criteria) or in raw form in a spreadsheet of patient-level data that you can manipulate later. In general, the raw form is helpful when getting started as it will allow you to drill down into the data and identify potential errors and underlying causes for these errors. Identifying errors in data such as mis-mapping and multiple locations for the same variable will take up much of your initial time with a practice. Having data in a raw format like an unprocessed spreadsheet will help you do this.

When accessing electronic data, you will usually work with staff at the practice who are in charge of creating reports for the practice. This can be a health educator who has been assigned to manage reporting, a QI staff person, a designated "super-user" for the practice, a clinician, or the front-desk clerk. Whoever this individual is, he or she will become an important part of the QI work you do with the practice, and also ideally a member of the QI team. You will learn from them, and they will learn from you. Over time your goal will be build their knowledge of the type of information and reports to produce to support QI work at the practice; and you will learn from them and build your knowledge about working with data in the particular IT systems they are using.

For your practices that use EHRs and electronic patient registries, you will want to become familiar with the reporting capabilities of these IT systems. Some of the needed functions, however, may require new programming. And depending on the way you want the data arrayed, it could be beyond the functionality of the EHR system. It is worth a significant investment of your time to learn as much as you can about how to coax data from the system. Developing a relationship with those who are in charge of the IT system(s) and can reconfigure reports to meet your needs will have a high payoff.

With electronic patient data, you can work with practice staff to create standing reports on key performance metrics that can be run repeatedly over time. These reports make it easy for the

### **Information to Include in a Data Pull Request**

- List of performance variables/metrics
- Patient inclusion (for example, patients with certain chronic conditions or patients seen in the office in the past 12 months)
- Patient exclusion criteria (for example, patients with ESRD)
- Time period covered (start and end date)
- Format of data

practice to continue performance reporting after the active facilitation intervention is finished.

Equally important is training staff to develop their own reports and modify existing reports so they can easily add new performance metrics over time or change the parameters of old ones.

In addition to providing a list of the performance variables you want included in the data pull, inclusion and exclusion criteria for the patient records that will be queried, and time period for the data, you will need to specify the format for receiving the data, such as a spreadsheet with individual patients or visits as rows and the variables as columns. The advantage of performance audits using data from EHRs is that you can often pull data on the entire population of patients seen during the specified time period, rather than limiting the audit to a subset of 30-to-60 patient records. Provide the IT staff, or whoever will pull the data, precise written descriptions of the criteria for inclusion and exclusion. A sample of instructions for IT for a performance audit data pull is provided in the Appendix.

## **Balancing Capacity Building and Hands-On Support in Getting Data**

It is worth adding a note of caution here. First, it is unrealistic to expect that as a PF, you will have expertise in extracting data from every IT system you encounter in the practices you work with, as this can easily reach 40 or more systems across your panel of practices. Your goal should be to engage and build capacity of practice staff to do this, and help them access resources for training if they do not have this knowledge already, rather than doing the work for them yourself. Of course, if you have expertise in the particular IT system, by all means you can provide the training. And you will also need to help with much of the heavy lifting in identifying sources of errors in the data and helping the practice staff fix it permanently – for example, engaging the IT vendor to correct mapping errors in the system, or to eliminate duplicate entry options for patient information.

You will want to resist taking on the function of extracting and cleaning data for the practice, as it is an essential skill they will need to acquire in order to sustain QI work once you leave or put them on a maintenance schedule of support. This said, in some practices, especially very small ones with limited resources to direct to data collection, you may need to take this task on initially to increase their capacity to eventually do this on their own. For example, you may set-up report templates for the practice that staff can use over and over again, and automate their production as much as is feasible.

## Privacy and Data Security

All data collected from a practice are highly sensitive. Whether the data are from patient records or staff surveys, the practice facilitator must keep data secure at all times. You should take a number of measures to protect confidential information. First and foremost, never take identified patient data offsite from a practice.

**Never** take identifiable patient data (data with patient names or other identifiers) from a practice or store data with PHI on your computer. Lost or stolen laptops are a common cause for **data breaches**.

Electronic data are particularly difficult to secure, especially in the era of cloud computing. Any data transmitted to or stored on your computer, tablet, or laptop should be deidentified with all personal health information (PHI) removed. A list of what is considered protected PHI can be found in the Health Insurance Portability and Accountability Act (HIPAA) descriptions. For more information on HIPAA compliance, see [Module 7](#), Professionalism for Practice Facilitators.

A key code connecting patient PHI, including medical record number, to data you maintain on your computer or any that you are transporting offsite will need to be created to allow you to re-identify data if needed. This key code should be housed at the practice and never taken offsite. In addition, you will need to set the security on your laptop to require a password to access any practice information stored on it. Any data transmitted through email or stored on cloud applications should similarly be deidentified, with the master code maintained only at the practice.

You will need to be familiar with and comply with all regulations of HIPAA as it relates to performance data and access to patient data. In addition to protecting sensitive patient information used in assessing clinical performance, you also need to be concerned about privacy and confidentiality of a practice's performance data.

Assessing clinical performance can be a threatening and sensitive process for a practice. While sharing aggregated performance data and best practices across practices is a critical part of facilitation and of quality improvement in general, you will need to confirm that you have a practice's permission to share information about their performance and improvement work before you do this. You will also need to clarify the conditions under which this is acceptable to the practice. Typically, these discussions will occur with practice leadership and your program director, and will be clarified at the start of an improvement intervention. But you will need to remain sensitive to these issues as you work across your practices and with other facilitators.

Note: this module is based on Module 8 of the Practice Facilitation Handbook. Available at: <http://www.ahrq.gov/professionals/prevention-chronic-care/improve/system/pfhandbook/>

## **Appendix 14. WeServeEveryone Clinic Case Example**

WeServeEveryone is a federally qualified health center (FQHC) in Long Beach, California. It served 35,000 patients and provided approximately 80,000 patient visits last year. Average cycle time for a visit at all three of its practice sites is 75 minutes. The organization wants to improve patient experience and is interested in reducing patient cycle time as one way to do this.

Approximately 50 percent of the patients who receive care from the clinic are Latino and about 20 percent are monolingual Spanish. About 3 percent of the patients speak Nahuatl. Thirty percent of patients receiving care from the clinic are Asian and Pacific Islanders, and the remaining 20 percent are Caucasian. Forty-five percent of patients are children, 50 percent of patients are adults, and 5 percent are geriatric. Fifty percent of patients are uninsured, and 98 percent are at or below 200 percent of poverty; 70 percent are at or below 100 percent of poverty. Twenty percent of patients are diagnosed with diabetes, 15 percent with hypertension, and 3 percent with asthma.

The chief medical officer (CMO) of WeServeEveryone was serving as a quality improvement (QI) committee of one for the clinic until recently when she attended a session at a conference about QI methods for FQHCs. After returning, she engaged your organization to assist her in forming a QI committee, updating the clinic's QI plan, and identifying some first improvement aims.

Because so many of their patients have diabetes, the CMO and the QI team decided to focus their initial QI work on improving their diabetes care. They are interested in seeing how they are performing on HEDIS\* quality indicators for diabetes and comparing themselves to benchmarks from the local community clinic association and those contained in the *National Healthcare Quality Report*.

The clinic recently hired a care coordinator to help with the care of chronic disease patients. It also recently implemented an electronic health record. One of the clinicians recently realized that entries for foot exams had been mapped incorrectly and were not being captured as part of the comprehensive diabetes care record. This is the only data field that appears problematic at this point.

Dr. Sand thinks the clinic is doing “fine” with diabetes care and does not think it is necessary to look at the data. On the other hand, the CMO, Dr. Likes, is very interested in seeing what the data look like not only for diabetes but also for hypertension and asthma.

\* HEDIS stands for Healthcare Effectiveness Data and Information Set.

**12/18/2010 - Office Visit: F/u Diabetes**

**Provider: Carl Savem MD**

**Location of Care: WeServeEveryone Clinic**

## **OFFICE VISIT**

### **History of Present Illness**

**Reason for visit:** Routine follow up to review medications **Chief Complaint:** No complaints

### **History**

**Social History:** His wife Marzapan died 5 years ago this month and he is more introspective.

### **Diabetes Management**

#### **Hyperglycemic Symptoms**

**Polyuria:** no

**Polydipsia:** no

**Blurred vision:** no

#### **Sympathomimetic Symptoms**

**Diaphoresis:** no

**Agitation:** no

**Tremor:** no

**Palpitations:** no

**Insomnia:** no

#### **Neuroglycopenic Symptoms**

**Confusion:** no

**Lethargy:** no

**Somnolence:** no

**Amnesia:** no

**Stupor:** no

**Seizures:** no

### **Review of Systems**

**General:** denies fatigue, malaise, fever, weight loss

**Eyes:** denies blurring, diplopia, irritation, discharge

**Ear/Nose/Throat:** denies ear pain or discharge, nasal obstruction or discharge, sore throat

**Cardiovascular:** denies chest pain, palpitations, paroxysmal nocturnal dyspnea, orthopnea, edema

**Respiratory:** denies coughing, wheezing, dyspnea, hemoptysis

**Gastrointestinal:** denies abdominal pain, dysphagia, nausea, vomiting, diarrhea, constipation

**Genitourinary:** denies hematuria, frequency, urgency, dysuria, discharge, impotence, incontinence

**Musculoskeletal:** denies back pain, joint swelling, joint stiffness, joint pain

**Skin:** denies rashes, itching, lumps, sores, lesions, color change

**Neurologic:** denies syncope, seizures, transient paralysis, weakness, paresthesias

**Psychiatric:** denies depression, anxiety, mental disturbance, difficulty sleeping, suicidal ideation, hallucinations, paranoia

**Endocrine:** denies polyuria, polydipsia, polyphagia, weight change, heat or cold intolerance

**Heme/Lymphatic:** denies easy or excessive bruising, history of blood transfusions, anemia, bleeding disorders, adenopathy, chills, sweats

**Allergic/Immunologic:** denies urticaria, hay fever, frequent UTIs; denies HIV high risk behaviors

### **Vital Signs**

Ht: **70** in. Wt: **190** lbs. T: **98.0** degF. T site: **oral** P: **72** Rhythm: **regular** R: **16** BP: **158/ 90**

### **Physical Exam**

**General Appearance:** well developed, well nourished, no acute distress

**Eyes:** conjunctiva and lids normal, PERRLA, EOMI, fundi WNL

**Ears, Nose, Mouth, Throat:** TM clear, nares clear, oral exam WNL

**Respiratory:** clear to auscultation and percussion, respiratory effort normal

**Cardiovascular:** regular rate and rhythm, S1-S2, no murmur, rub or gallop, no bruits, peripheral pulses normal and symmetric, no cyanosis, clubbing, edema or varicosities

**Skin:** clear, good turgor, color WNL, no rashes, lesions, or ulcerations

### **Assessment**

**Problems (including changes):** Adam is voiding better since increasing Hytrin to 5 mg/day. Blood pressure is lower. He is following his diet, by his account. He has not had any hypoglycemic episodes, no night sweats. Feet are inspected and there are no callouses, no compromised skin. No vision complaints.

**Impression:** Sub optimal sugar, control with retinopathy and neuropathy, high glucometer readings. He will work harder on diet. Will increase insulin by 2 units. BP and symptoms of prostatism are better.

### **Home Glucose Monitoring:**

AC breakfast 110 to 220

AC breakfast mean 142

AC dinner 100 to 250

AC dinner mean 120

### **Plan**

#### **Medications:**

HUMULIN INJ 70/30 20 u ac breakfast

**01/20/11- Office Visit: F/u Diabetes**

**Provider: Carl Savem MD**

**Location of Care: WeServeEveryone Clinic**

## **OFFICE VISIT**

### **History of Present Illness**

**Reason for visit:** Routine follow up for Diabetes

**Chief Complaint:** No complaints

### **Diabetes Management**

#### **Hyperglycemic Symptoms**

**Polyuria:** no

**Polydipsia:** no

**Blurred vision:** no

#### **Sympathomimetic Symptoms**

**Diaphoresis:** no

**Agitation:** no

**Tremor:** no

**Palpitations:** no

**Insomnia:** no

#### **Neuroglycopenic Symptoms**

**Confusion:** no

**Lethargy:** no

**Somnolence:** no

**Amnesia:** no

**Stupor:** no

**Seizures:** no

### **Review of Systems**

**General:** denies fatigue, malaise, fever, weight loss

**Eyes:** denies blurring, diplopia, irritation, discharge

**Ear/Nose/Throat:** denies ear pain or discharge, nasal obstruction or discharge, sore throat

**Cardiovascular:** denies chest pain, palpitations, paroxysmal nocturnal dyspnea, orthopnea, edema

**Respiratory:** denies coughing, wheezing, dyspnea, hemoptysis

**Gastrointestinal:** denies abdominal pain, dysphagia, nausea, vomiting, diarrhea, constipation

**Genitourinary:** denies hematuria, frequency, urgency, dysuria, discharge, impotence, incontinence

**Musculoskeletal:** denies back pain, joint swelling, joint stiffness, joint pain

**Skin:** denies rashes, itching, lumps, sores, lesions, color change

**Neurologic:** denies syncope, seizures, transient paralysis, weakness, paresthesias

**Psychiatric:** denies depression, anxiety, mental disturbance, difficulty sleeping, suicidal ideation, hallucinations, paranoia

**Endocrine:** denies polyuria, polydipsia, polyphagia, weight change, heat or cold intolerance

**Heme/Lymphatic:** denies easy or excessive bruising, history of blood transfusions, anemia, bleeding disorders, adenopathy, chills, sweats

**Allergic/Immunologic:** denies urticaria, hay fever, frequent UTIs; denies HIV high risk behaviors

### **Vital Signs**

## Appendix 14C. Sample Set of Electronic Pull Instructions for IT Staff

### Diabetic Patient Identification IT Instructions

#### Patient list generator

**Step 1:** Identify all patients that meet all of the following criteria:

- **Diabetic:** Select patients with any ICD9 = 250.xxx in the billing data.
- Among those, select patients with birth dates after 1/1/1927 and prior to 1/1/1962 [**Age > 50 years and <85 on 1/1/12**]
- Record number of patients seen at least twice in the 2-year period (3/30/2010-3/31/2012) \_\_\_\_
- Generate list seen at least once in both 12-month periods (3/30/2010-3/30/2011 AND 3/31/2011-3/31/2012).
- Record number of diabetics identified \_\_\_\_
- Of diabetic patients selected, select those with three hemoglobin A1c values dated from 3/31/2011 to 3/31/2012:
  - Record number of patients identified \_\_\_\_

**Step 2:** Identify all patients that meet all of the following criteria:

- **Hypertensive:** Select patients with any ICD9 = 401 or 402 or 403 or 404.
- Among those, select patients with birth dates after 1/1/1927 and prior to 1/1/1962 [**Age > 50 years and <85 on 1/1/12**]
- Record number of patients seen at least twice in the 2-year period (3/30/2010-3/31/2012) \_\_\_\_
- Generate list seen at least once in both 12-month periods (3/30/2010-3/30/2011 AND 3/31/2011-3/31/2012).
- Record number of hypertensives identified \_\_\_\_

Of diabetic patients identified in Step 1 (excluding criteria for hemoglobin A1c values, including those seen twice in both 12-month periods and only those within the range of birth dates listed), how many have any ICD9 = 401 or 402 or 403 or 404?

*Module 14: Collecting Performance Data Using Chart Audits and Electronic Data Extraction*

## Appendix 14D. Performance Metric Calculator for Diabetes

### Diabetes HEDIS Measure Outcomes

HEDIS Measure	Audit Result	Practice Goal	National or Local Benchmark
HbA1c screening rate = $[\text{Total(A)}/30 \text{ (total \# of charts audited)}] \times 100 =$			
HbA1c less than 7.0 = $[\text{Total(B)}/\text{Total(A)}] \times 100 =$			
Blood pressure documented = $[\text{Total(C)}/30 \text{ (total \# of charts audited)}] \times 100 =$			
Blood pressure less than 130/80 = $[\text{Total(D)}/\text{Total(C)}] \times 100 =$			
LDL-C screening rate = $[\text{Total(E)}/30 \text{ (total \# of charts audited)}] \times 100 =$			
LDL-C less than 100 mg/dL = $[\text{Total(F)}/\text{Total(E)}] \times 100 =$			
Eye Exams = $[\text{Total(G)}/30 \text{ (total \# of charts audited)}] \times 100 =$			
Foot Exams = $[\text{Total(H)}/30 \text{ (total \# of charts audited)}] \times 100 =$
