

Did you know that you can also do subscripts and superscripts in Google Slides? It's very easy. It only takes a minute. Just follow the steps we've listed in this guide.

## How to Do Subscript/Superscript (Exponent) on Google Slides

- **Step 1: Open a Presentation on Google Slide**

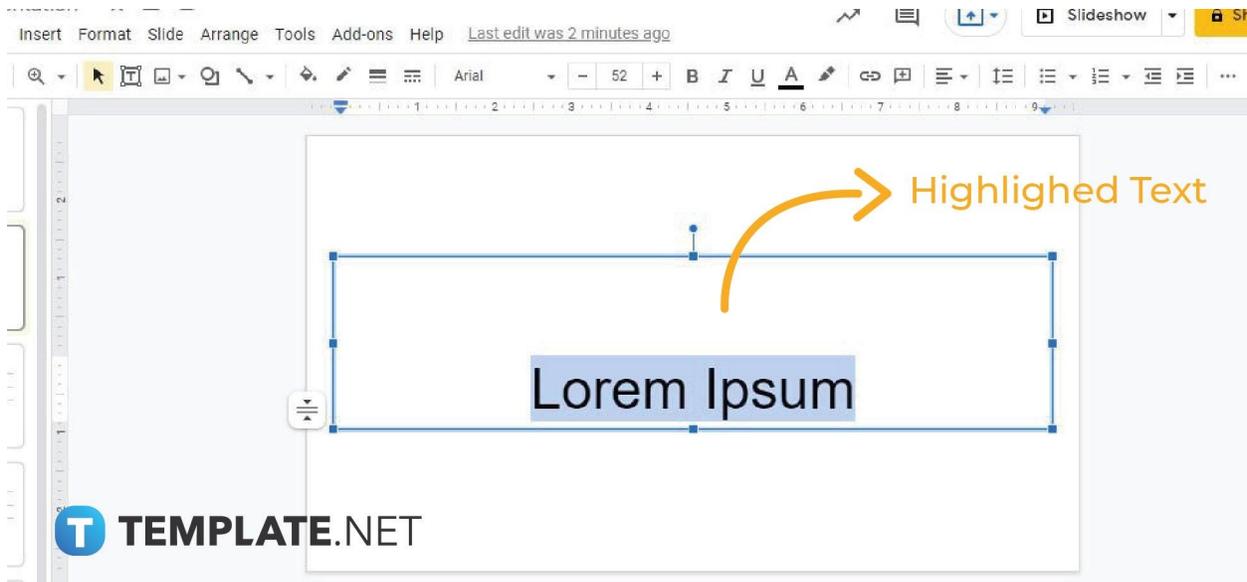

You have to log in to your Google account first to access Google Slides. If you don't have an account, you can simply register. It's completely free and can be done in just a few minutes.

**T** TEMPLATE.NET

Launch your favorite web browser and type [docs.google.com/presentation](https://docs.google.com/presentation) on the address bar. Open any of your saved presentations in Google Drive or on your computer. If you don't have any saved presentations, you can start [creating a new Google Slides presentation](#) by clicking the Blank option or opening a template from the template gallery. Speaking of template gallery, you can use any of our editable templates for [Google Slides](#).

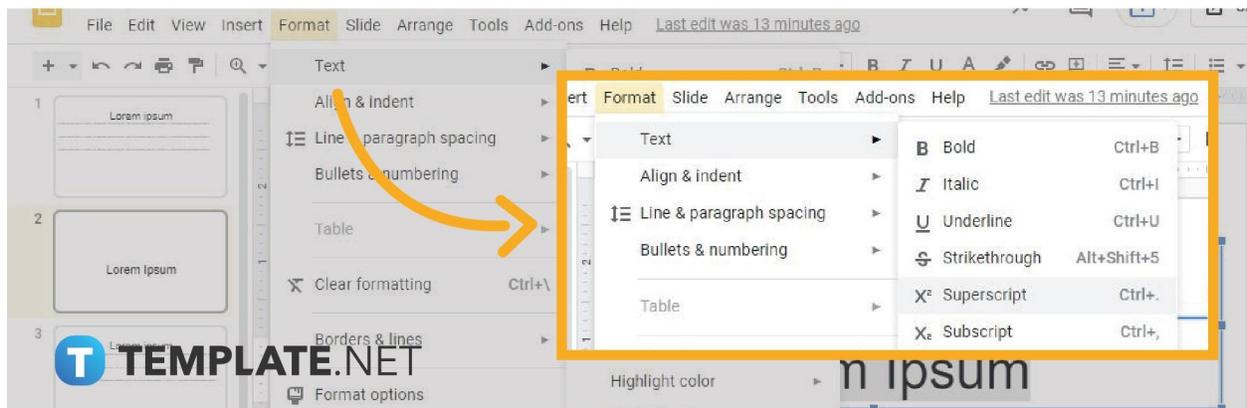

- **Step 2: Highlight the Text You Want to Use as Subscript or Superscript**

Once you've opened a [presentation](#) and you're done [adding a text box in Google Slides](#), highlight the text you want to use as subscript and superscript. Hover your cursor next to the text, hold the left-click button, and drag the cursor across the text to highlight it.

You can also type Ctrl+A on your keyboard but it'll highlight all the words in your text box.

- **Step 3: Go to the Format Menu and Select Text**

After highlighting the text, go to the Format Menu found on the toolbar and click Text on the drop-down menu. After clicking Text, another drop-down menu will appear which includes the Superscript and Subscript options. Click on the former if you want your text to be superscript and click on the latter if you want your text to be subscript special characters.

- **Step 4: Type Ctrl+. and Ctrl+, (Keyboard Shortcuts)**

There's an even quicker way to do subscripts and superscripts, which is using keyboard shortcuts. After highlighting a text, simply type Ctrl+. on your keyboard if you want to be superscript and type Ctrl+, if you want to be subscript. It'll take effect immediately; no need for a subscript or superscript generator.

- **Step 5: Repeat the Process to Undo Superscript or Subscript**

If you want to bring your text back to normal, just repeat the process. Go to the Format Menu, click Text, and click either Superscript or Subscript again. You can also execute this using the keyboard shortcuts.

## **What is the difference between superscripts and subscripts?**

Superscripts appear above the baseline or on a text's upper right side while subscripts appear below the baseline or on a text's lower right side. Both of them are commonly used in writing mathematical expressions, chemical compounds, formulas, and other forms of scientific literature.

## **Can I also make superscripts and subscripts in Google Docs?**

Yes, you can also create superscripts and subscripts in Google Docs and other word processor apps. The process is practically the same as creating superscripts and subscripts in Google Slides.

## **Is Google Slides ideal for creating scientific presentations?**

Absolutely! Google Slides has everything you need to create presentations that outline your scientific or mathematical studies. You can use graphs, insert tables, and make use of the subscript and superscript tool to write exponents. Open Google Slides now and get started with drafting your presentation.

## **Does Google Slides have a mobile version?**

Yes, Google Slides has a mobile version that you can get from the App Store or Google Play Store. With it, you can create presentations on the go anytime.
