

Find out how to make a cell bigger in Google Sheets here. This will help you be able to fit more content into your spreadsheet.

- **Step 1: Select Cell to Change Size**

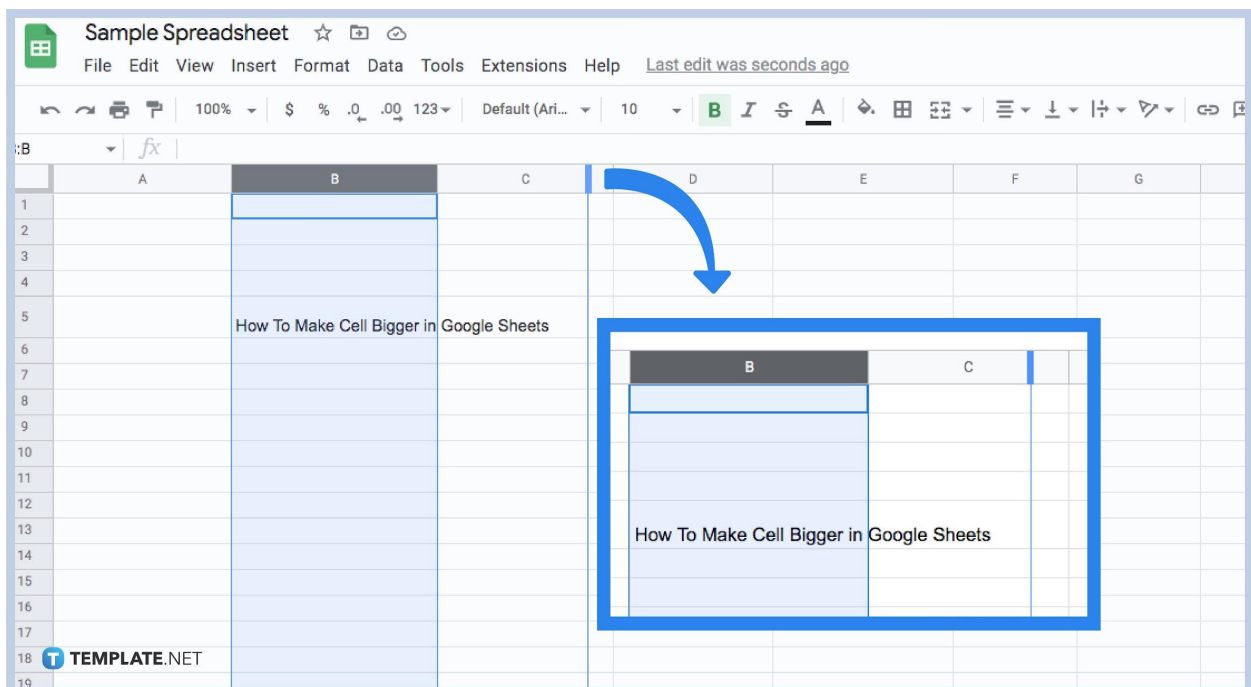

When you are inputting data or content on a cell it might be too small to fit. If you are working on an itinerary it could be a sentence. If it's a Price list, it could be a big number. sometimes [merging](#) or [formatting the cell](#) won't just cut it. You will need to expand the cell to fit text in there. Select the cell you want to change size to get started.

Step 2: Scroll Up and Highlight

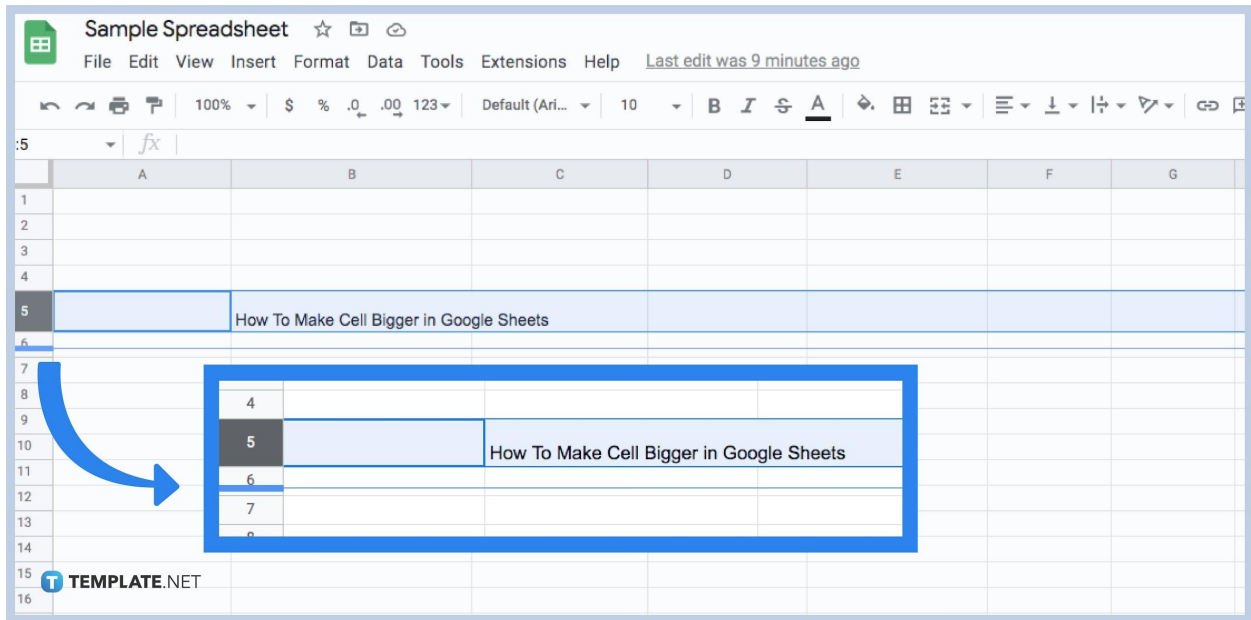

Scroll up to the column header. there you can change the width of the cell. Highlight it and you will select the whole column.

Step 3: Click Hold and Drag

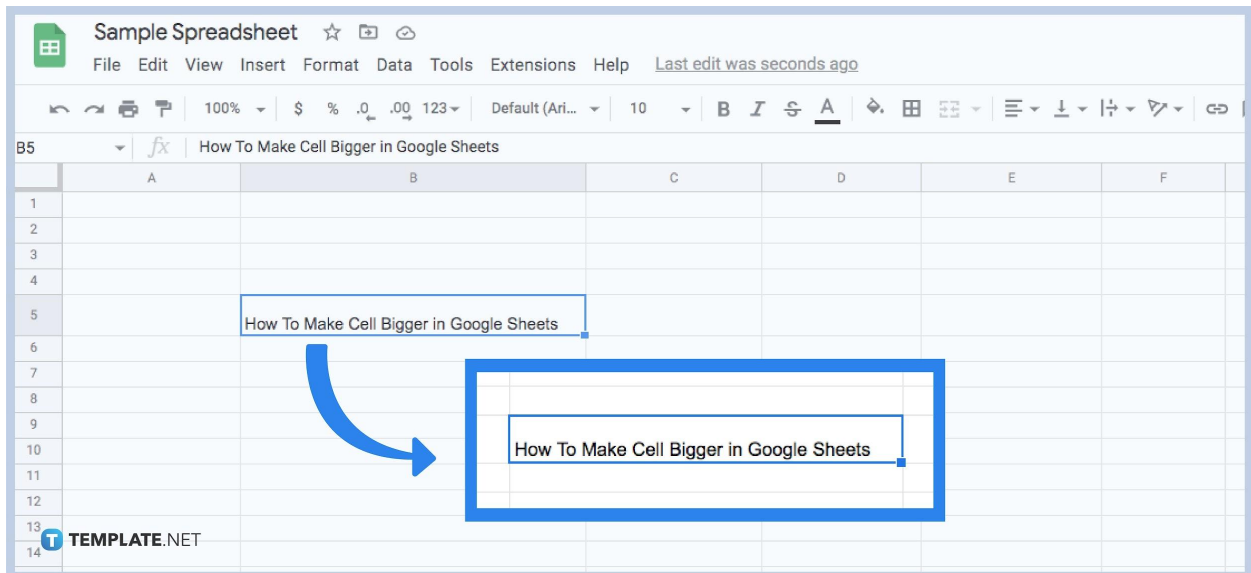

Hover your cursor on the border of the header till it changes into an arrow. Then drag the cursor and you can change the width of the column.

Step 4: Repeat Process on the Side

To change the length, move your cursor to the row headers which show numbers. Repeat the process in Step 2. This will let you change cell height.

Step 5: Repeat Till You Get Ideal Size

You can repeat this process till you get the right size for your cells. You might not always get the right size on the first go when adjusting cell height and width, nobody is perfect after all. And this is how to make a cell bigger in [Google Sheets](#).

Is there a way to add a text box and make it bigger in Google Sheets?

No, there's no way to add and make a text box bigger in Google Sheets.

Is there another way to make a Cell look bigger besides changing the entire row/column?

One other way to make it look like it changed sizes in google sheets is by merging cells to adjust sizes.

What happens when I merge cells and then change their size?

It will change the width and length of the row and column connected to it.
