FAQ

What kind of energy is a magnet?

The kind of energy associated with magnets is electromagnetic energy, which when it's stored, is known as magnetic potential energy.

Why does the magnetic pole move?

When a magnetic pole moves, it's an indicator of electrons either pushing or pulling away from each other.

How strong is a magnet's magnetic field?

The magnetic field strength of a permanent magnet measures around 8,000 gauss.

What is a magnetic assembly?

According to Stanford Magnets, a magnetic assembly is a system that combines both magnetic and non-magnetic materials for the purpose of achieving a high magnetic field and cost reduction.

Where do magnets get energy from?

Electric currents generate a magnetic field or energy, which comes from electrons.

What temperature can magnets withstand?

The strongest magnets can withstand temperatures up to 80 degrees Celsius.

What is magnetic equipment?

Magnetic equipment (e.g., magnetometer) is used in the creation, manipulation, and detection of magnetic fields.

How do magnets affect electricity?

Magnets have the ability to attract and repel electrons.

What are the lines on a magnet?

The lines on a magnet indicate the orientation and strength of the magnetic field.

What is the shape of a natural magnet?

Most natural magnets, such as lodestones, have irregular shapes.
