When you save a PSD as a JPG, it becomes more compatible with other apps and easier to share with others. You will find that saving it as a JPG will make it easier to view in other mediums or devices.

- **Step 1: Open Photoshop Project**

Photoshop may be found in your Start menu or in the Applications folder in Finder. To open your project, go to 'File' and then 'Open,' or right-click the project PSD file in your file manager and choose 'Open with Photoshop.'

- **Step 2: Edit Your File**

After opening your file, you may want to do some slight edits or alterations to it. Take your time in adding the changes so you won't have to keep repeating the process or go back to it later on. If you are done with this step and feel more than satisfied with your file, proceed to the next step.

- **Step 3: Save Your File**

Once you are satisfied with the edit and changes made to the project, you are ready to save the file as a Joint Photographic Experts Group, more commonly known as JPG. Go to the 'File' menu at the top left once again and click on 'Save as'. Click on 'Save as type' and find the JPEG format. Clicking 'Save' will save your file from PSD to JPG.

If JPG is not satisfactory to you, you can save it as another file format as Adobe Photoshop is compatible with others as well.
