Do you need to crop unnecessary items out of an Adobe PDF page? Adobe Acrobat Pro will allow you to do this to bring the focus of readers to the more important aspects of each page.

## How to Crop PDF Page by Using Adobe Acrobat Pro

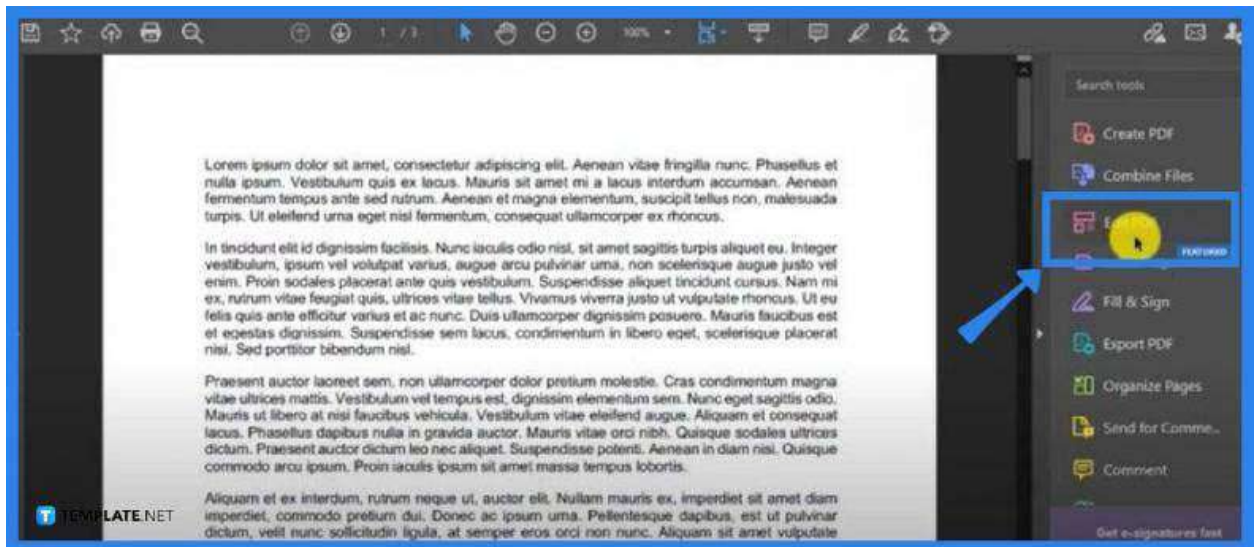

Adobe Acrobat Pro is an excellent platform to manage, manipulate, or just do anything with your PDF file besides viewing and editing. And if you need to crop out a certain portion of your PDF document, here is what you can do to get it right.

- **Step 1: Open PDF Document**

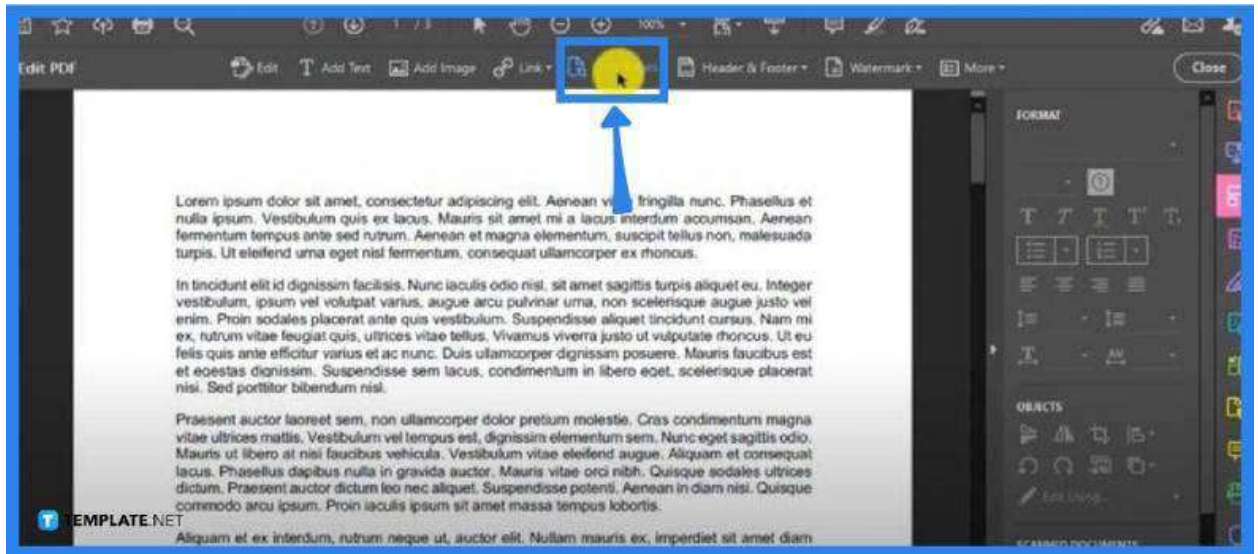

To open your PDF file, go to the “File” menu and click the “Open” prompt. In the dialog box, look for the file that you want to work on. Tap on it, and click “Open.”

- **Step 2: Go to the Sidebar Panel and Click on Edit PD>**

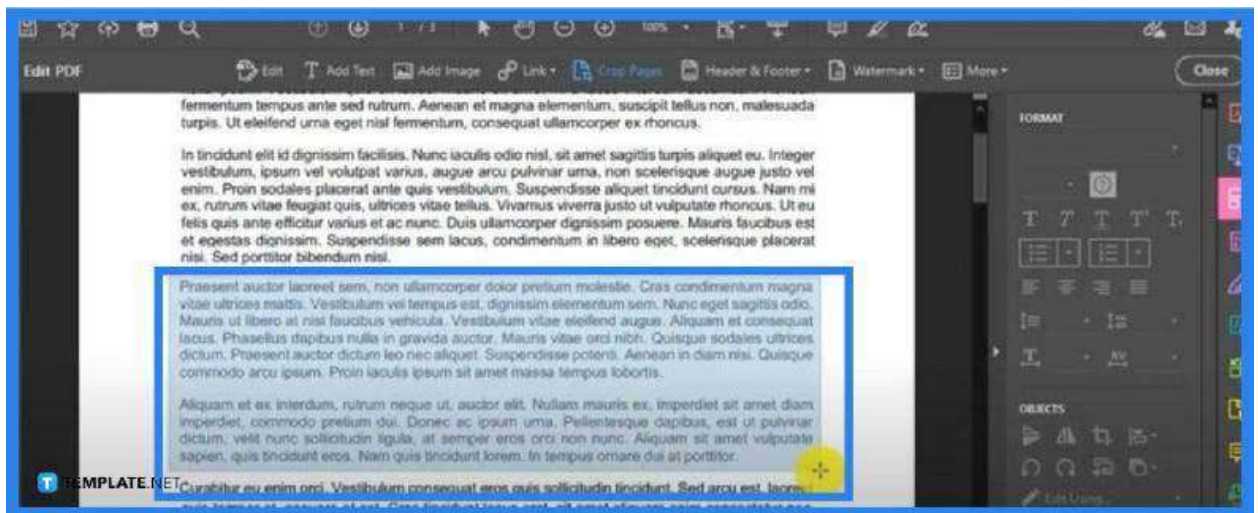

On your workspace, you should see a sidebar panel on the right with plenty of tools in it. One of them is “Edit PDF.” Click on this so you can begin the process.

- **Step 3: Click on Crop Pages**

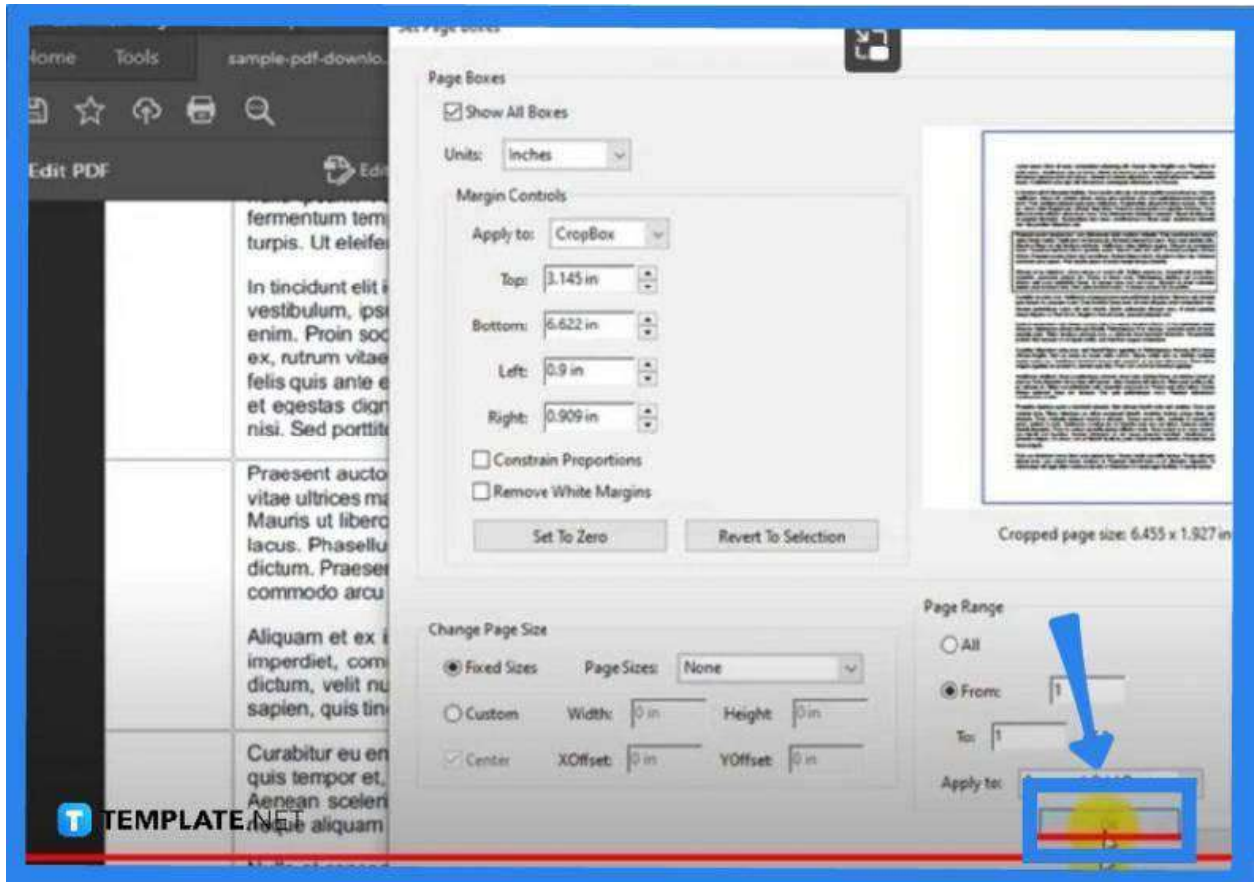

Right at the top of your workspace is the “Edit PDF” toolbar. Head over to the “Crop Pages” option and click it. Once you have done it, you can begin cropping texts without a hitch.

- **Step 4: Select the Area to Be Cropped**

Search through the page for the area(s) you want to crop. Select this by bringing the mouse pointer right to where the desired cropping begins and releasing it at the area where it is supposed to end. Then double-click inside this area and you will now be taken to the “Set Page Boxes” window.

- **Step 5: Click O>**

Go over the “Set Page Boxes” dialog box. Tick on “Show All Boxes” if it has not been ticked yet. Then, go ahead and click “OK.” You should now see the cropped area above the page you are working on.
