With the help of Adobe, keeping your website interesting will entail some creativity that effectuates everyone's sense of wonder. Your logo and text bring about a lasting impression that incites the interest and loyalty of your target market so do your best to create the right text in SVG format.

## How to Keep Text in SVG When Saved in Illustrator

Adobe Illustrator enables you to quickly find fonts that make your logo greatly fascinating. But if you have trouble keeping the text intact when saving it in the SVG file format, here is what you can do to make it right.
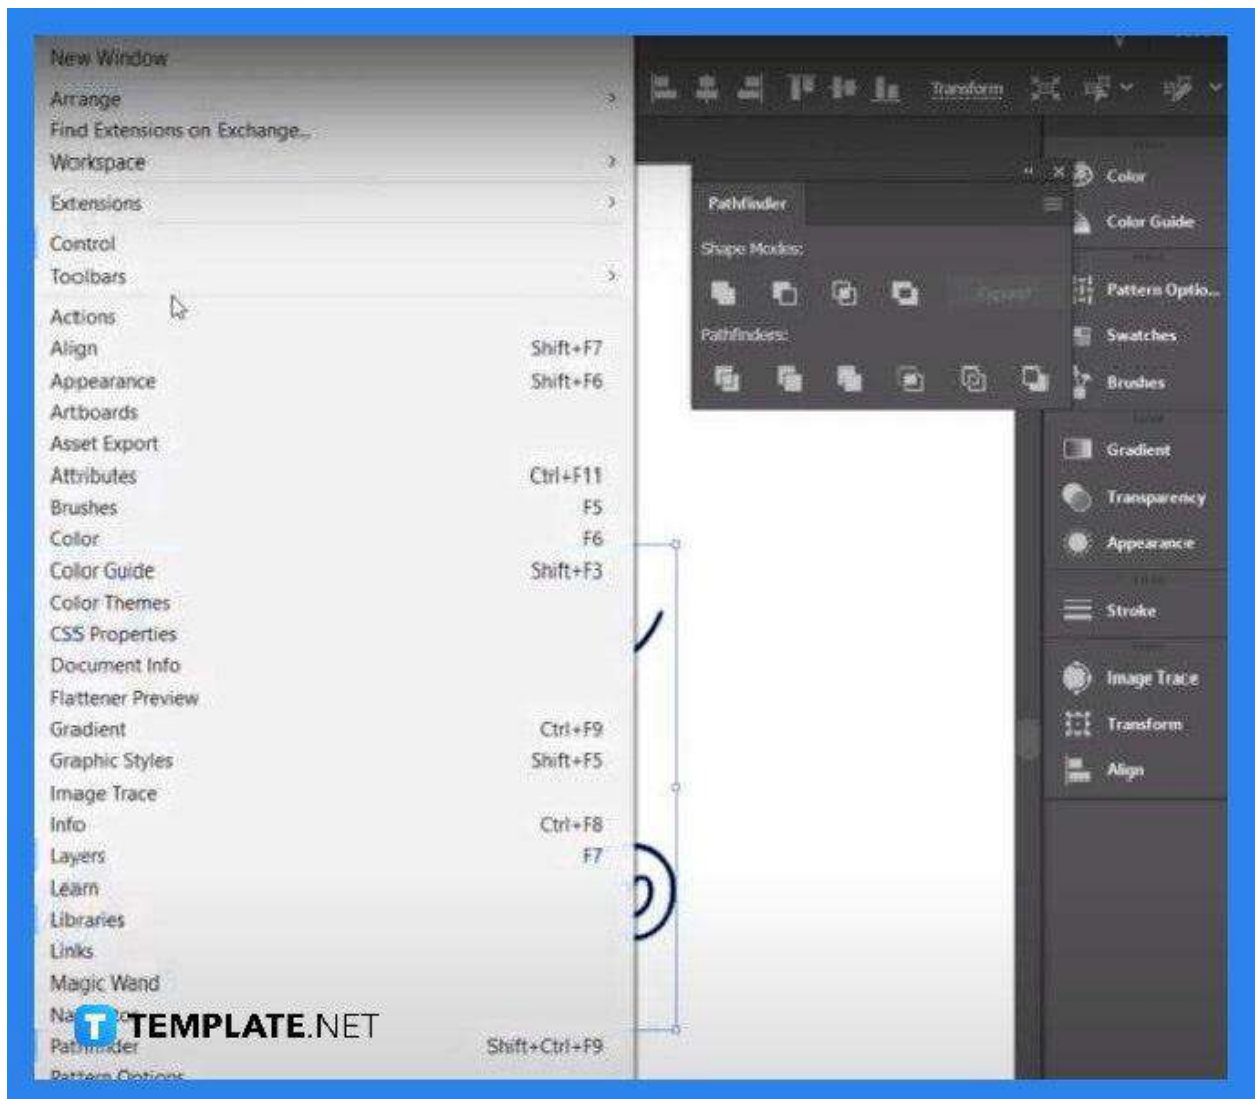

- **Step 1: Vectorize the Text**

The text you created or uploaded may still not be a vector graphic. To make it into vector artwork, select the text and head over to "Object" and click on "Expand" to get into the window where you need to go over the settings. In the "Expand" dialog box, tick on both "Object" and "Fill" and click "OK."

- **Step 2: Zoom in to Ensure the Text Is Now a Vector Graphic**

Go to the toolbar on the left and find the "Zoom" icon which looks like a magnifying glass, then click on it. Now, tap on the text and zoom in. You should see vectors all over the text but there could also be design space around it if you look closely. This will eventually cut some parts of the text so do not leave it that way.

- **Step 3: Unite the Text with Pathfinder**

To connect the text, go to "Pathfinder." You can find this on the top right of your artboard but if you do not have it there, go to the taskbar and click on "Window." Select "Pathfinder" and make sure it is properly ticked for the tools to be displayed. Click the "Unite" icon from there.

- **Step 4: Save the File as SV>**

When you have done all the necessary work, hit "File" and click "Save As" to save the file. In the "Save As" dialog box, make sure to change the format type to SVG before you click the "Save" button. Tap on "OK" in the "SVG Options" window to complete the saving process.
