How to Remove a Password from a PDF File

If your Adobe PDF file no longer needs to be protected with a password, you can remove it quickly and easily. Removing passwords from PDF files is straightforward as presented in this article and you can clear away the unnecessary encryption from it in no time.

How to Remove a Password from a PDF File

Important PDF files bearing highly sensitive information need thorough protection, not to mention that PDFs are the easiest to access file format and the most distributed across any device. Without a question, password protection is an absolute necessity, especially for mission-critical ones; but, nevertheless, if the encryption is no longer serving its purpose, simply remove it from the file.

• Step 1: Open the PDF Document

From your workspace, go to the "Print" icon on the top right side of the screen. Click on the button. Then, select either "Microsoft Print to PDF" or "Save as PDF" before you click "Print" at the bottom. • Step 3: Save the File

Once you click on "Print," a window file explorer will pop up. Here, you need to select a location where you wish to save your file. Set the destination folder and then click on "Save."

• Step 4: Open the New File

To check if you have successfully removed the password, visit the newly saved file. By this time, you must be able to access it without typing a password to unlock it. Otherwise, you have completely done it incorrectly or something is just off with your software.
