Test Case Ideas and Examples

Test cases are documents that contain a set of test data, preconditions, expected results, actual results, and postconditions which are developed to verify compliance against a specific requirement. It defines the objectives, references, prerequisites, and steps that a test case must follow. Performing test cases allow developers in a business or organization to identify defects within the software and make analysis to fix them.

Business Test Case Ideas and Examples

[Business test cases](#) refer to any tests performed among the target market to make better business decisions. To make a business test case, find your requirements or user stories, create a summary for each test case, description of goals, determine starting conditions, and write clear and simple steps. Performing these tests enable testers to validate the system's functionality as part of the business analysis and implementation.

Performance Test Case Ideas and Examples

Performance test cases describe the types of users and the number of users on each type that will be simulated in a performance test. To execute a performance test, identify the test environment and tools, define acceptance criteria, prepare the environment and tools, run the test, and resolve and retest. Performance test cases are used to identify if the high speed, scalability, and stability of a system are achieved.

Validation Log Test Case Ideas and Examples

A validation log test case is performed to validate the testing coverage of an application. It contains information about the test date, tester name, results, and status. A [test case validation log](#) also ensures that the tested and developed software satisfies the client or user's needs.

The image shows a clipboard with a 'TEST CASE VALIDATION LOG' form. The form is titled '[NAME OF COMPANY] TEST CASE VALIDATION LOG'. It includes fields for 'Date Filled:', 'Filled By:', 'Position:', 'Employee No.:', and 'Department:'. It also has fields for 'Signature:', 'Authorized by:', 'Position:', 'Employee No.:', and 'Department:'. Below these fields is a table with 7 columns: 'TEST CASE #', 'TEST DATE', 'TEST CASE DESCRIPTION', 'TEST DATA', 'EXPECTED RESULT', 'ACTUAL RESULT', and 'STATUS (Pass/Fail)'. The table contains 3 rows of test cases. A pen is placed vertically to the right of the clipboard. A small plant is visible in the bottom left corner. At the bottom of the image, there are icons for various office applications: a notepad, Word, Excel, PowerPoint, and a bar chart. The text 'TEMPLATE.NET' is visible in the bottom right corner.

[NAME OF COMPANY] TEST CASE VALIDATION LOG						
Date Filled:	[DATE]	Signature:		[SIGNATURE]		
Filled By:	[FULL NAME]	Authorized by:		[FULL NAME]		
Position:	[POSITION]	Position:		[POSITION]		
Employee No.:	[EMPLOYEE NUMBER]	Employee No.:		[EMPLOYEE NUMBER]		
Department:	[DEPARTMENT]	Department:		[DEPARTMENT]		
TEST CASE #	TEST DATE	TEST CASE DESCRIPTION	TEST DATA	EXPECTED RESULT	ACTUAL RESULT	STATUS (Pass/Fail)
101		Check response when valid email and password is entered.	Email: tempEmail@gmail.com Password: tempEmail01	Create new user login should be successful.	Create new user login was successful.	Pass
102		Check response when valid email address and invalid password is entered.	Email: tempEmail@gmail.com Password: tempemail	Create new user login should not be successful.	Create new user login was successful.	Fail
103		Check password when password and confirm password entered does not match.	Password: Test000 Confirm Password: Test00	Create new user should not be successful. Page should state: Password should match.	Create new user login was not successful.	Pass

Automation Testing Test Case Ideas and Examples

[Automation testing test cases](#) focus on the application state transitions and data changes. Security, vulnerability, and cyber testing are examples of automated tests. automation testing test cases are performed when you want to run the same test cases across multiple machines at the same time.

Test Case Ideas FAQs

Why do we need test cases?

Test cases enable testers or the QA to determine whether the optimization of software or application's feature is working according to requirements needed by stakeholders.

What are the typical test case parameters?

The typical parameters of a test case are the test steps, prerequisites, test data, and expected results.

Which test cases are written first?

System testing is usually done first in which the complete application is tested as a whole to evaluate whether the system has complied with all requirements.

What are the components of a test case?

A test case includes the test name, test ID, objective, reference, and prerequisites that can be in a form of a checklist, test setup, test steps, results, and status.

What are the test case design techniques?

Test case design techniques include specification-based, structure-based, of experience-based techniques.

What is a positive test case?

Positive test cases occur when a test is designed to return what is expected according to the requirements and ensures that users can perform each appropriate action when using valid data.

What will be the test case for Lift?

A test case for the lift will test various scenarios including the verification of its capacity, usability, functionality, comfort, height, weight, and volume.

What are valid and invalid test cases?

Valid test cases are used to ensure that users can perform appropriate actions resulting in positive test cases while invalid test cases are used to break the software which is performed in negative test cases.

What are the main attributes of a test case?

The main attributes of a test case are the test case ID, test summary, description, and prerequisites or preconditions.

How to write test cases for a search engine?

To write a test case for a search engine, verify if the search box allows users to enter keywords, check the limit of keywords, search without entering any keyword, press the spacebar in the search box then search for the result, and if results are displayed, check the order of the result set.

When we should start writing test cases?

When we should start writing test cases?

How do you write boundary value test cases?

Writing a boundary value test case is based on testing the boundary values of valid and invalid partitions.
