

How to Make a Business Card in Adobe Illustrator

A business card is used by many professionals to represent the brand of their company or organization. Business cards are essential tools to show prospective customers that you are a business professional in your respective field. In this article, learn how to make a professional business card in Adobe Illustrator.

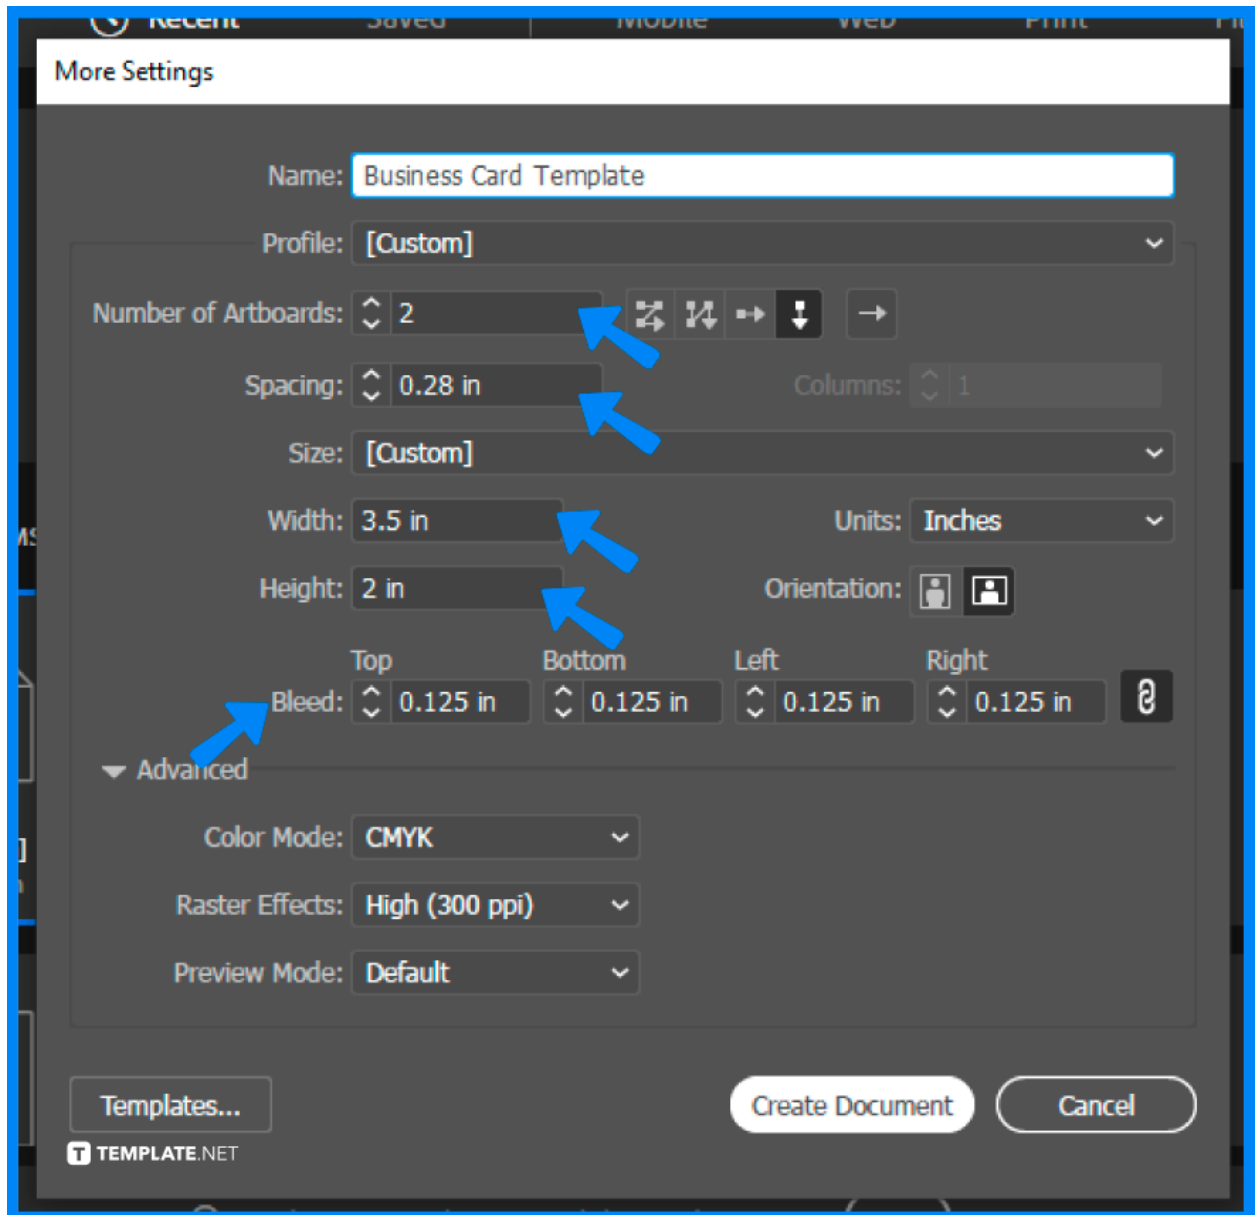

How to Make a Business Card in Adobe Illustrator

If you are planning to create a professional business card, consider that you need to make a lasting impression and send an impactful message to your potential clients, customers and partners. Below are simple steps that you can follow if you need to make a compelling business card in Adobe Illustrator.

- **Step 1: Create a New Document**

Open the Illustrator. In the New Document dialogue box, type the name of the business card design, add two in the number of artboards, the width should be 3.5 inches and the height should be 2 inches, edit the bleed margin, make sure that it is in CMYK color mode with high image resolution, and click OK.

- **Step 2: Place the Logo Design and Contact Info**

Prepare the logo design and basic contact information of your business. Include the logo art, your name and job title, business address, business contact numbers, office email address, and company website in your document.

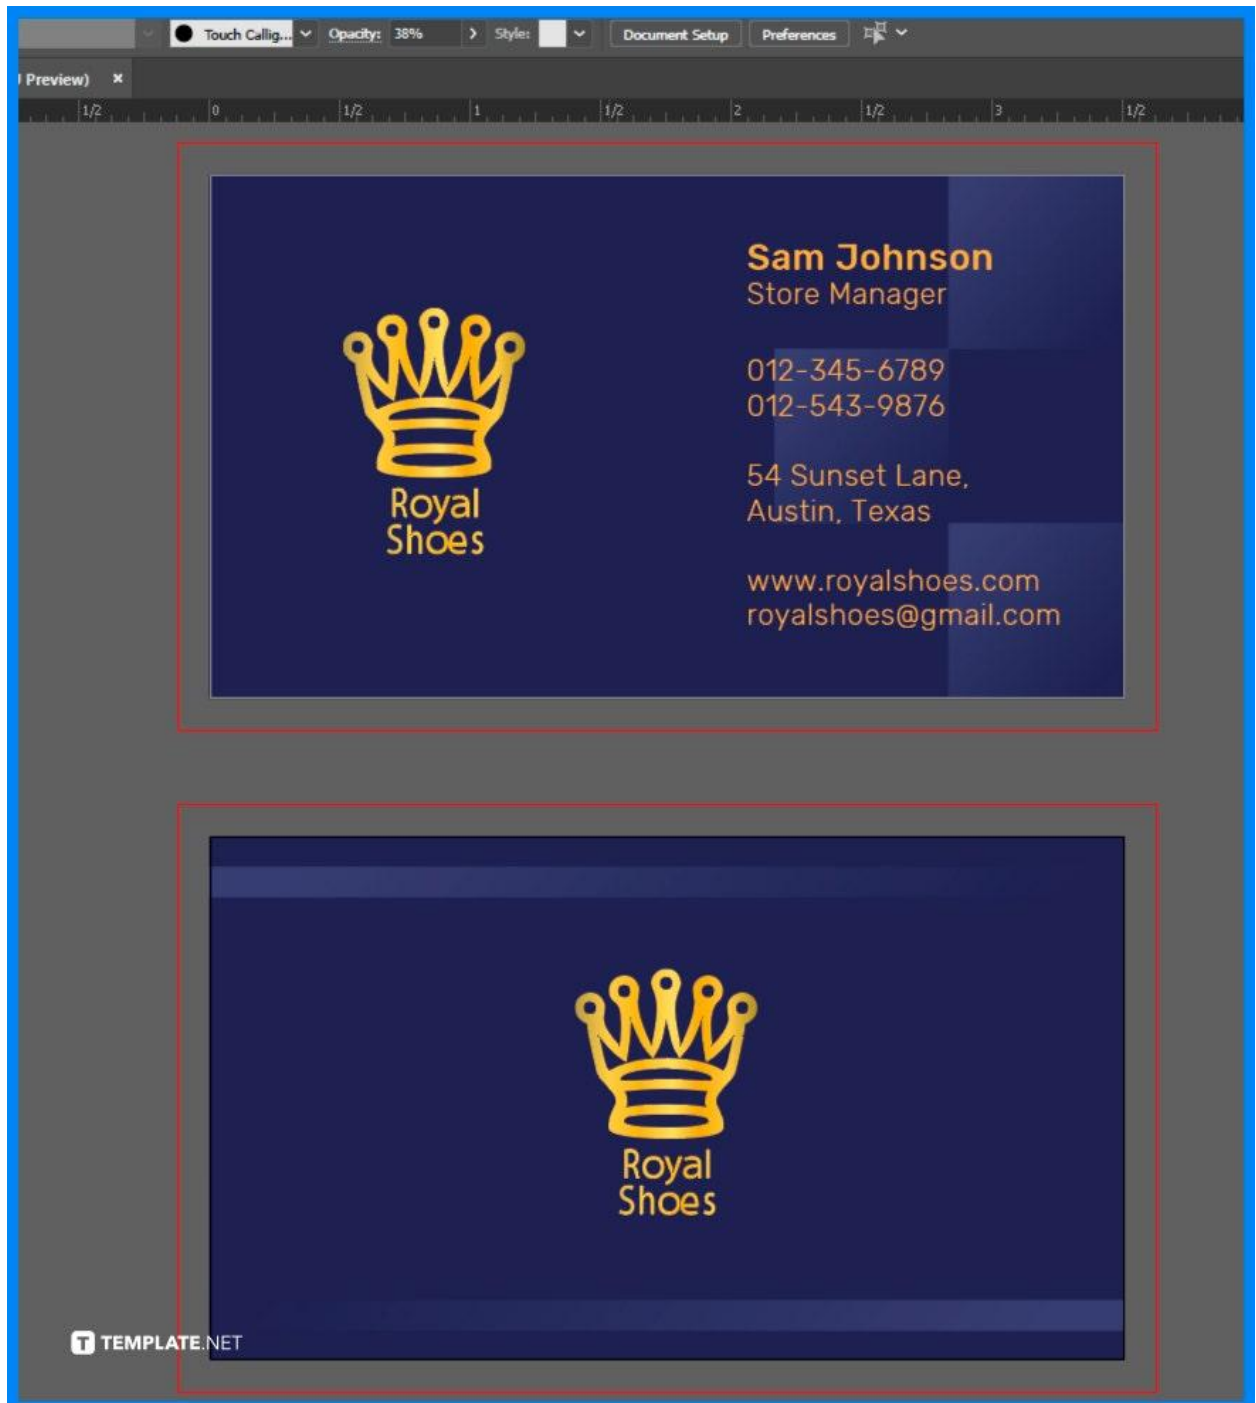

- **Step 3: Design the Background of the Business Card**

Use the Pen tool, Selection tool and the Gradient tool to make some shapes and color them for the background of your business card. Adjust the points while creating the triangles and lines for the front part of your business card.

- **Step 4: Arrange the Design Elements in Both Sides**

Take some time to arrange each design element of your business card in both sides. Drag and place each element to the appropriate position you want them to be.
