FAQs

What triggers a 404 error?

A website issue, moved or deleted webpage, or mistyped URL may trigger a 404 error.

Where does Error 404 come from?

Error 404 comes from the name of a room at CERN where few scientists were working on the World Wide Web in 1980 to develop a database infrastructure offering open access to data in different formats and web inventor Tim Berners-Lee defined the codes starting with 4 as errors, including Error 404.

What is a 404 error in API?

A 404 error in API indicates that it can't map the URL of the client to a resource but the link can be available in the future.

What are the two main causes of the 404 error message?

The two main causes of the 404 error message are when the webpage was transferred or deleted and the wrong URL.

Why is Error 404 so common?

Error 404 is so common because some websites may possibly have pages that don't exist, have been moved, or have broken links.

What are 404 pages used for?

404 pages are used to let visitors know that they land on a faulty URL and to offer them a few options where to go like returning to the homepage or visiting other related posts.

Can a 404 error code occur in any web browser?

A 404 error code can occur in any web browser.

What does a 404 page look like?

A 404 page looks like a web page displaying a clear and concise statement that the page the user requested is not available, simple advice for the users on how they can correct the error, the main header and footer navigations, and essential links to major sections of the website.

Why is it important to remove 404 errors?

It is important to remove 404 errors because it is bad for the user experience of the visitors and the SEO of the website.
